The explorers had not gone far before they realized that the map the President had supplied was useless; it did not even indicate the correct direction of the river. All they could do was to follow the Missouri to its source. From there dead reckoning might take them to the sea. For the first few months it was an idyllic journey—comfortable camps at night, days uneventful save for sightseeing. By firelight the two leaders worked painstakingly on their journals, for the President and Congress wanted complete reports on plants, trees, beasts, birds, and Indians. One evening Lewis wrote: "In addition to the common deer, which were in great abundance, we saw goats, elk, buffaloes, antelope, the black-tailed deer, and the large wolves." They counted 52 herds of bison in 1 day.

Three months out of St. Louis, the adventurers had voyaged 850 miles and were not far from what is now Sioux City in Iowa. The going got harder. The clumsy bateau repeatedly lurched aground on sandbars. One man collapsed from sunstroke. Sgt. Charles Floyd died of colic in the choking heat of an August afternoon. They buried him on a high bluff, the first American soldier to die west of the Mississippi. The boats went on, the men silent, Lewis wrapped in thought. A man dead, many sick, the real perils just begun.

That night, instead of appointing a new sergeant, Lewis told the men themselves to elect a successor to Floyd. Amid much oratory three soldiers were nominated. Grizzled Patrick Gass was chosen. Next morning the party took to the boats with renewed zeal; Lewis had turned the men's minds from brooding over the loss of their companion.

Misadventures multiplied. Nineteen-year-old George Shannon, on scout duty, got lost and almost starved. A riverbank crumbled and nearly destroyed the precious supplies. Lewis, habitually scouting ahead, had several narrow escapes from stampeding buffalo.

Most of the Indians they met were friendly, grunting with pleasure over trinkets and delighted with whisky dealt out in judicious doses. Whenever possible, chiefs of nearby tribes were summoned to powwows under a sailcloth canopy, the flag flying, and told about the Great White Father in Washington to whom they now owed loyalty. Council Bluffs takes its name from one of these powwows.

Gradually the huge pile of presents shrunk and word of the remarkable white men spread over the prairie. To one mighty chief the generous Clark gave his army uniform. Several times Sioux warriors threatened an attack in an effort to get all the wonderful gifts, but were backed down by a rattling of cutlasses and by a reminder that the mysterious Great White Father could exterminate them all.

A lazy half-breed, Toussaint Charbonneau, interpreted. The party had picked him up along the route. With him was his 19-year old Indian wife, Sacajawea, slender in figure, with long braids and dark eyes. Six years before, she had been stolen from the Shoshones by marauding braves, and Charbonneau had won her in a gambling bout? A woman on the expedition? Lewis and Clark had hesitated, but they desperately needed Charbonneau. Besides, Sacajawea's tribe was said to dwell beyond the high mountains. Maybe this Indian girl would know the way.

Meadows and prairies gave way to rolling hills, the hills stiffened into plateaus. But the horizons still were land. Where did it end? Where was the Western Ocean?

Every day the party found landmarks new to white men. Where a river or promontory had a definite Indian name, Lewis left it that way in his journal. Other places were called after members of the expedition irrespective of rank.

The first heavy snows fell in November, trapping the party near the site of Bismarck, N. Dak. In the half year they had made 1,600 miles, all up the Missouri. A few traders had been thus far but no white man had ever gone farther. They built a stockade, calling it Fort Mandan for the friendly Mandan Indians, and here during the long dreary winter a baby boy was born to Sacajawea.

April 7, 1805, the last ice having drifted down the river, Fort Mandan was left behind. So was the bateau, too big for the narrowing Missouri and no longer needed for the dwindling supplies. Six canoes made of buffalo hides and willow branches took its place.

The country grew wilder, the landscape less hospitable. Mosquitoes and gnats were a curse. Buffalo were scarce and, without buffalo hide for patching, clothes and moccasins began to shred.

But the ragged frontiersmen now were unlocking the secrets of the continent. They came upon huge, ferocious grizzly bears that it took half a dozen musket balls to kill. They spent weeks of back-breaking toil portaging goods and boats past thundering cataracts which they called the Great Falls of the Missouri. And on May 26, a Sunday, Lewis, who had been scouting ahead as usual, came back to camp excited. He had glimpsed majestic mountains.

Independence Day, 1805, was celebrated at the foot of the Rockies, 2,500 miles and 14 months from St. Louis. Wistfully they drank the last of their brandy. Other supplies, too, were running low. Lewis wrote in his journal: "We all believe that we are about to enter upon the most perilous part of our voyage."

Only the Indian girl, her baby strapped to her back, had the vaguest notion where they were. From out of the memories of her childhood Sacajawea recognized a creek at which her people had collected clay for painting their war parties. When the dwindling Missouri abruptly forked into three branches her memory again helped. She sent them up the swiftest fork, which they named Jefferson River.

The stream twisted through a labyrinth of volcanic walls at which it clawed with white-capped talons. Sometimes the boats upset and their loads were swept downstream. The men waded through the glacier-fed water, pulling their leaky craft on long ropes, for they could not walk on the steep banks. "The men by being constantly wet are becoming more feeble," the captain noted. Sharp stones cut to pieces what remained of their moccasins and drops of blood flecked the stream. They had journeyed as close to the crest of the continent as water would take them.

Wherever they looked the skyline was a jagged row of pinnacles—mountains piled on mountains—such peaks as Americans never had seen. Each ridge surmounted brought a glimpse of a ridge higher still. Eventually they reached the region where now Montana joins Idaho, where the Rockies and the Bitter Root Mountains run parallel in a vast maze. Lewis sent scouts scattering to find some way across. They came back baffled, four of them nursing injuries from falls.

By now, Lewis realized that he must find the Shoshones or give up the expedition. His fatigued men could not drag themselves over those summits, let alone carry burdens; they must have horses. Rations were low and they could not survive a Rocky Mountain winter. Soon the snows would start, and it would be too late even to go back. They had not seen an Indian for 4 months, though Sacajawea insisted that she twice had seen the smoke signals of her people.

Lewis chose three men and pushed on ahead. Every morning when they broke camp they left beads and mirrors as tokens of friendliness to any Indians who might stumble onto the dead fires. At last, ragged and exhausted, they crawled to the top of a high ridge and looked down the Pacific slope of the Rockies. Here, on the Continental Divide, they unfurled the flag. They had two pounds of flour left.

As Chief Cameahwait and 60 mounted Shoshone braves jogged over the crest of Lemhi Pass late in the afternoon of August 13, they saw tottering toward them a tall, ragged stranger with pale skin. In his right hand he carried a cloth of red, white, and blue. Half a hundred paces to the rear were three other strangers with long, black sticks.

"Taba bone (white man)," the hollowed-eyed stranger said.

"Ah hi e! (I am much pleased!)" the young chief replied gravely. There on the roof of the continent the feathered savage and the Virginia gentleman embraced and slapped each other on the back.

Game had been scarce that year and the Shoshones were hungry, yet they shared with the white men. The captain's pulse quickened when the chief offered him roast salmon. Salmon from the sea!

Lewis bartered ornaments, coats, blankets and knives for 38 horses, which were sent back to bring up the main party. A dramatic incident marked the reunion of the two parties. Sacajawea, meeting Cameahwait, greeted him with affectionate cries. They were brother and sister! Nevertheless, when the party went on, Sacajawea chose to stick with her husband rather than return to her people.

A withered old Shoshone, whom Clark christened Toby, volunteered to act as guide. He was not much help. They wandered in the Bitter Root range like men in a rock-bound fortress, while snow began to plug the passes. Provisions ran out. They had to kill some of the horses, which were starving too, with ground bare of fodder. One day there was only a brace of pheasants for 32 mouths to eat. They scraped the bed of Hungry Creek for crawfish; they grubbed for roots. One wretched night they ate a timber wolf Lewis shot. Bratton was in desperate plights, and Lewis gave him his mount and struggled ahead on foot. A horse loaded with winter coats slipped, screamed in terror, and vanished over a precipice.

Finally they reached open country. They looked like skeletons, and now even the inexorable driver, Lewis, collapsed. While he lay beside the Clearwater River, too weak even to sit up, the others trimmed pine logs and burned out the cores to shape rude canoes. The work was hard for exhausted men and it went slowly.

In the canoes they floated down the Clearwater and into the Snake, at the spot where Lewiston, Idaho, stands. They paddled down the Snake and about the middle of October came to a mighty river which surged out of the north and bent westward. This was the Columbia—the Great River Oregon—which for two generations adventurous souls had dreamed of exploring.

For 3 weeks more they stroked the bulky canoes between mountains and grassy meadows and fir forests. One quiet night a soldier heard a far-off roar. Soon long swells rolled up the river from downstream. Gulls flew overhead. The water was full of salmon. There was a tang of salt in the air.

Fog cloaked the Columbia on the morning of November 7, 1805, but around noon it cleared and in the distance a wide expanse of tossing breakers was visible. For a moment the men looked out to sea in silence. Then they cheered. In his queerly spelled diary Clark scrawled: "Ocian in view! Oh, the joy! We are in view of the ocian, that great ocian, which we have been so long anixous to see!"

For the first time Americans had spanned the continent they would one day inhabit from coast to coast. On that lonely shore, the flag flapping at his back, Captain Lewis thanked the soldiers in behalf of President Jefferson. They had reached their goal ahead of any nation with rival ambitions, covering 4,100 adventurous miles in a year and a half. Just 125 years later one could board a plane at St. Louis after daybreak and be in Portland before dark.

Near present-day Astoria the expedition built a stockade, Fort Clatsop, that sheltered them during the second winter, and in the bark of a tall pine that overlooked the sea Lieutenant Clark carved this record:

"Wm. Clark December 3d, 1805, by land from the U. States in 1804 & 5."

Hoping that, even if they were lost on the way home, their success would be known, Lewis prepared a statement they all signed attesting that the party had reached the Pacific overland from St. Louis. The document was posted at the fort and copies were sent to Indian villages along the shore. No sign or trace of white men was visible, but perhaps a landing party from some frigate anchoring off that coast would come across them.

Late in March of 1806 the expedition began the long trek homeward. It required only a third of the time consumed in traveling west for now they had landmarks. Again Sacajawea was invaluable, riding at the head of the column with Lewis, her thin arm unerringly pointing the way. "She has equal fortitude and resolution with any member of the party," Lewis wrote. They arrived in

St. Louis on September 23, 1806, 6 months to the day after abandoning Fort Clatsop.

The Nation had given them up for dead. They had been gone 2 years and 4 months. Cheering crowds escorted them through St. Louis. Jefferson wrote his congratulations and triumphantly informed Congress of the expedition's success. They had traveled 8,000 miles through wilderness, had reached their objective and returned, had lost only 1 man. People were amazed by the information brought back—fierce bears which weighed 1,000 pounds; mountain ranges 3 times as lofty as the Alleghanies; buffalo herds measured by horizons; wild sheep with horns shaped like cornucopias; goats that leaped from crag to crag. The New York Gazette predicted that the region would probably never be traveled again, but President Jefferson visioned "a great, free, and independent empire on the Columbia River."

Curiosity about the far West increased. Men and women started looking with pride and hope toward the vast area across the Mississippi. The bulky journals of Lewis and Clark, supplemented with notes kept by two of the sergeants, were read in hundreds of homes. For the first time people had an accurate idea of what lay beyond the western frontier of the Nation.

The Lewis and Clark expedition still stands as the most important ever undertaken by the United States, clinching our title not only to the vast Louisiana territory but later to the Oregon lands as well.

Lewis was appointed Governor of Louisiana and Clark was named Indian agent for the region and promoted to the rank of brigadier general. Lewis, always a lonely man, was unhappy in political office. In the autumn of 1809, on his way to Washington to answer criticism of his administrative methods, he stopped for a night at an inn near Nashville, Tenn. Shortly after midnight a pistol shot waked the household, and the tavern keeper found the 35-year-old explorer on the floor with a gaping wound in his side. He died at dawn. Jefferson, stunned with grief, always believed the captain had committed suicide. Tennessee folk maintained that he had been murdered. The mystery has never been satisfactorily solved.

Not far from where Lewis died, a granite shaft stands, graven with the words of the President who sent him westward:

"His courage was undaunted. His firmness and perseverance yielded to nothing but impossibility."

Trees overhang the grave, and on stormy nights the wind roars through them like breakers crashing on the Pacific's distant shore.

Political Refugees

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

SUPPLEMENTARY INFORMATION FROM STATE DEPARTMENT

Mr. BECKWORTH. Mr. Speaker, on May 2, 1941, I placed in the CONGRESSIONAL RECORD some information concerning the first 1,000 refugees whose names were submitted by the President's Advisory Committee on Political Refugees. I desire to include in the RECORD supplementary information which I received yesterday from the State Department. Incidentally, an article appeared in the Washington Times-Herald May 8, 1941—yesterday—having the following headline: "United States Presses Round Up of Suspect Aliens—Jackson Orders Check of All Visitors' Permits." Observing the contents of the headline, one should note in the supplementary information that 371 of the 699 people referred to in the new summary were issued visitors' visas—more than 50 percent. It might also be noted that the three consular officers admitting the largest numbers of refugees were Marseille, 427; Lisbon, 221; Moscow, 91.

The supplementary information follows:

The following is a summation of the consular offices involved and the number and kind of visas issued in the first 1,000 cases on the President's Advisory Committee list:

Name of office	Number of cases considered	Number and type of visas issued
Marseille	427	43 immigration, 186 visitor, 89 unspecified.
Lisbon	221	104 immigration, 46 visitor, 20 unspecified.
Moscow	91	27 visitor, 7 unspecified.
Oporto	81	16 immigration, 60 visitor, 3 unspecified.
Nice	60	3 immigration, 22 unspecified, 24 visitor.
Lyon	29	6 visitor.
Zurich	25	13 immigration, 2 visitor, 2 unspecified.
Casablanca	17	1 immigration, 13 visitor.
Geneva	11	1 immigration, 6 visitor, 2 unspecified.
Stockholm	7	3 visitor.
Berlin	4	
Ciudad Trujillo	4	
Lourenco Marques	4	
Madrid	4	
Budapest	3	
Algiers	3	
Yokohama	2	1 visitor, 1 unspecified.
Rio de Janeiro	2	
Tangier	2	1 visitor.
Tokyo	1	
Nogales	1	1 immigration.
Luxemburg	1	1 visitor.
Bilbao	1	Do.

Total immigration visas	182
Total visitor's visas	371
Total unspecified visas	146
	699

Aid for Lithuania

EXTENSION OF REMARKS

OF

HON. ANTON F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

RESOLUTION OF JOSEPH MORDECAI BRENNER RELIEF SOCIETY

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas Joseph Mordecai Brenner Relief Society, a strictly charitable, not-for-profit organization, with principal office at 910 South Independence Boulevard, Chicago, Ill., since the day it was organized (January 19, 1930) until June 15, 1940, has aided individuals, families, and organizations known to be in dire need to the extent of thousands of dollars, of which about 10 percent has gone to those in the United States of America and about 90 percent has gone to those in the Republic of Lithuania; and

Whereas on or about June 15, 1940, Russia took over the three Baltic Provinces of Lithuania, Estonia, and Latvia, as a result of which funds of the society available for Lithuania since then have remained idle in the society's treasury because prudence dictated that the society should determine whether or not it be advisable to continue to send funds to Lithuania; and

Whereas within the last 2 months the society, through its secretary, conducted a most thorough investigation and desires that its findings be made known to similar organizations, inasmuch as the society's experiences have convinced it that at this late date much confusion exists among many similar organizations in Chicago as to whether or not it be advisable to continue to send funds to Lithuania and the society believes that such confusion exists elsewhere in the United States of America; and

Whereas all the local banks which the society has contacted "paint such a picture" as to convincingly leave the impression that it is quite satisfactory to send moneys to Lithuania, with which "picture" the society was not satisfied; and

Whereas the society, later on in its investigation, endeavored to determine how much of the necessities of life, such as food, clothing, etc., the American dollar could purchase, when converted into local Lithuanian currency, since June 15, 1940, as compared with prior to that time; and

Whereas the society has been in communication, for pertinent information, with sources whose integrity, honesty, reliability, and impartiality is beyond question—sources which have access to such information, sources which are interested solely in the protection of the American public, sources which would have no reason other than to state the facts and their honest opinions; and

Whereas one of these reliable sources has given the society this information: "It has been our experience that wherever the Russians take control ordinary commodities skyrocket in price. I believe it, therefore, safe to say that the American dollar will buy infinitely less today than it would a year ago. The conversion rate is something that is obviously so uncertain that I couldn't even guess. Like the German mark, the ruble is very rubbery"; and

Whereas another of these reliable sources has given the society the information that the Soviet Government has closed all operations of charitable organizations supported by foreign funds or supplies of foodstuffs and goods; that there is no method by which such supplies can be sent to Lithuania; and that the remittance of dollars, while possible through American banks, is accompanied by an 80 percent loss in purchasing power through Soviet exchange regulations; that while, therefore, it might be possible to send remittances via Moscow to Lithuania, where lits and rubles are both in circulation, there is no assurance that the institutions referred to are still in operation, or that the funds would reach them; that it is understood that the joint distribution committee, after attempting to operate in Lithuania, has ceased such attempts; that such reports as have been received indicate that Jewish schools in the Baltic provinces and former Poland have been taken into the general school system, and even new schools set up for Jewish children; that it is emphasized that these are Soviet schools and that probably the organization and curriculum have been modified accordingly; and

Whereas the latter source has expressed the belief that the society and similar societies in the United States of America should concentrate their efforts in areas more accessible and outside of the Soviet orbit: Now, therefore, be it

Resolved, That during the existence of conditions substantially the same as at the present time, the society confine its activities entirely to assist those in dire need in the United States of America, and that the contents of this resolution be made known to the general public through several newspapers in the city of Chicago and through the CONGRESSIONAL RECORD, and that for the purpose of securing insertion in the last-named publication, this resolution be sent as soon as possible to the Honorable ANTON F. MACIEJEWSKI, representing the Sixth Illinois Congressional District in the House of Representatives, in which district are located the principal office of the society and a large part of its 200 members and their families.

CHARLES FRILLING,
President.

Attest:

ALBERT HIRSCH,
Secretary.

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

EDITORIAL FROM THE FREDERICK (OKLA.) LEADER

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I want to insert in the CONGRESSIONAL RECORD the following editorial from the Frederick (Okla.) Leader, praising the sound and courageous stand of my friend and colleague, the Honorable VICTOR WICKERSHAM, Congressman from the Seventh District of Oklahoma. The editorial was written by Mr. J. L. Newland, editor and publisher of the Leader:

[From the Frederick (Okla.) Leader]

OPPOSED TO STRIKES

When he is quoted in the newspapers as opposing strikes because of the detrimental effect they have on our defense program, Congressman VICTOR WICKERSHAM is voicing the sentiments of the Seventh Congressional District.

Ours is largely a rural district. It is a district which keeps its Army quota so nearly filled with volunteers that the selective-draft boards find their duties comparatively light. It is a district in which the proportion of native citizens is unusually high, and where patriotism is general.

In the Seventh District the people are willing to go their full length for America, and they expect other American citizens, or those who enjoy the benefits of the United States Government, to do likewise.

When Congressman WICKERSHAM declares he is opposed to strikes at this critical period in our Nation's life, he is, therefore, speaking the language of the people he represents.

Unless Washington Hears From People of United States in No Uncertain Terms, Brutal War Is Ahead

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

EDITORIAL FROM THE KNOXVILLE (TENN.) JOURNAL

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Knoxville (Tenn.) Journal of May 9, 1941:

[From the Knoxville (Tenn.) Journal of May 8, 1941]

UNLESS WASHINGTON HEARS FROM PEOPLE OF UNITED STATES IN NO UNCERTAIN TERMS, BRUTAL WAR IS AHEAD

Certainly some of the readers of this page recall William Seabrook's description of voodoo rites of West Indian natives. They will remember reading how, on certain nights, a drum will sound somewhere off in the jungle. From a hill miles away there will be an answering drumbeat; then from somewhere else, another, and another, and another.

Gradually a rhythm will be established, with the beats increasing in tempo. Bodies begin to sway to the savage exaltation of the drums; feet begin to move as the pulse of repeated stabs of sound assaults the ears. At last comes a frenzy of emotion that leaves the mind in complete paralysis, and always the steady, unrelenting challenge of the drums. The savages lose all sense of time and place, returning to their senses only when they are emotionally and physically spent. That is voodoo in the West Indies.

Voodoo methods are not confined to the West Indies.

The Roosevelt administration, unless the individual citizens of the United States make their wishes known in no uncertain terms, has decided upon active entry into the European war.

Mr. Roosevelt has not said so, but the signs are unmistakable. First, there were the light drumbeats of the New Deal columnists, the professional internationalists, the Dorothy Thompsons, all the list of United States "prominent" citizens bent upon another crusade to convert the globe to democracy at the point of the sword.

These beat upon the little drums and they didn't have the desired effect. There remained a majority sentiment in the country for aid to Britain without involvement; a conviction that this Nation is unprepared for war; that our democracy, if there is ever to be a last-ditch fight to preserve it, will be saved in this hemisphere rather than on some foreign battlefield.

So now come the big drums to quicken the pulse of war fever; to play upon our emotions; to convert an antiwar sentiment into a war sentiment; to gain a majority to the Government's already-fixed determination.

First there were remarks by the President that the citizens of this country were not aware of the dangers that face them, this to constitute a general background. Then Secretary of State Cordell Hull was brought before the microphone with an important drum; day before yesterday Senator CLAUDE PEPPER of Florida, beat the drum in the Senate; Secretary of War Henry Stimson night before last; and last night Secretary of the Navy Knox added his voice to the exhortations to war that soon will echo from radio station to radio station. And not to overlook anybody, Prime Minister Winston Churchill sends across the Atlantic his own special admonition.

No; the arts of voodoo are not confined to the West Indies. Here at home, in what may result in the most fateful decision of all our history, the drums of the administration take up the tempo. The words each ritualist employs differ from those of his colleagues. The approach is not always the same. But the conclusion they all reach and recommend is identical—the United States of America must become an active participant in the European struggle.

There is a general and not unjustified suspicion abroad in the land that Senator PEPPER is a nitwit, but nonetheless any man with such a soundingboard as the United States Senate cannot be ignored, because, unless there were other citizens of his type of mind, he could not be in the Senate. Further, it may be safely assumed that he speaks with the approval of the administration.

And what does the Florida Senator advocate in his go-to-war speech? Not that we simply enter the war on Britain's side but that we undertake also to provide the Chinese Army with flyers who, quite inadvertently, would "make a shambles of Tokyo." In effect the Senator wants a war with the whole world, despite the fact that our experts assert we are not even prepared to defend our own shores, much less to undertake aggression in all parts of the world.

No matter if it doesn't make sense, here is a United States Senator, hand in glove with the administration, advocating war on both oceans without delay. PEPPER can't be dismissed as an imbecile because there is no mental test required for membership in the Senate, and as a Senator his influence might turn the tide for war.

Then again there is Henry Stimson, admitted by the President's secretary to be speaking with administration approval. What does he say? In a nutshell, here it is:

"After providing for billions' worth of munitions to carry on the defense of our freedom, and while we hold in our hands the instrument ready and able to make all these steps effective, shall we now flinch and permit these munitions to be sunk in the Atlantic Ocean?

"Our entire history shows no precedent to make such a supposition credible. Neither the Government nor the people of the United States have ever given occasion to make anyone believe that such an act of irresponsibility and indecision would be possible."

In effect, the fire-eating Stimson dares the President to make any decision other than that of war. Yet Senator ARTHUR VANDENBERG made public yesterday a letter from Chairman Emory S. Land, of the Maritime Commission, disputing the administration's claim that 40 percent of the ships bearing war materials to Britain has been sunk. Only 8 ships of the 205 sailing from United States ports since December 30 have been sunk, asserts Mr. Land, who should know. Whose figures are right? Are we to be pushed into war on a false set of figures?

Before this has been published Secretary of the Navy Knox will have added his belligerent words to early drumbeats of PEPPER and Stimson. There will be a succession of others, all hammering out the same exhortation:

War! Convoys! And a little later, troops!

We are admittedly unprepared to defend ourselves here at home. We are, in accordance with our national commitments, shipping so much defense material to Britain

that we can't build our own defenses. Yet to war we are urged to go.

Talk about voodooism!

Lindbergh on National Defense and National Unity

EXTENSION OF REMARKS

OF

HON. C. W. (RUNT) BISHOP

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

Mr. BISHOP. Mr. Speaker and Members of the House, recently Colonel Lindbergh was in St. Louis, Mo., and spoke on the questions of national defense and national unity. One of the outstanding editors of my district was at that meeting. His impressions are so important to those of us in Congress, that I am taking the liberty to read them:

SERIOUS IN HIS TALK

We heard Colonel Lindbergh make a speech in St. Louis a few nights ago, had a seat close up in the front row, and got every word he spoke. He talked on whether or not this Nation was prepared for war in the air as compared with the equipment that Germany has. He thought that as pertains to competing successfully with Hitler's air forces that we were at present no match, and that if we should pool our interests with those of John Bull, it would require some time to catch up with the production of planes that the Hitler organization would be able to turn out.

The colonel was interested in facts and figures. He was quite serious and kept well to his point, spoke dignified, didn't lose his head and blow up in discussing facts which 3 years spent in Europe and England studying air warfare had taught him. Senator CLARK of Missouri had preceded him and did not get the best of attention of the 15,000 audience that listened to him. But when Lindbergh came on the audience listened with rapt attention and drank in every word that Colonel Lindbergh said.

Digressing from his recitation of facts as he knows them—and we believe that he knows the lay of the skies quite as well, if not better, than anyone else in America—he put this question, which seemed to strike deep in the minds of his vast audience:

"Have we not problems enough of our own without dividing our people over the issue of a foreign war?"

It set us to thinking, what's the use of it all any way? We are fully in sympathy with England, from which mother country we separated over a century and a half ago, and we have all but forgotten the war we again fought with her for freedom of the seas half a century ago, and we have almost ceased to remember the aid that England extended the Confederacy when the South of our own land attempted to overthrow the Union. We are favoring England in her cause today in every way. And we belong to that crowd that has many prominent leaders, both on this side and on the British Isles, that feel that we can be of greatest help in the present struggle in which the British Empire is engaged, by staying out of this old bloody European quarrel that has been going on for centuries. With Lindbergh, we hold in all seriousness that every true American is ready to fight to preserve our Nation, and to do that fighting right here at home.

I want to say to you Mr. Speaker, that the thoughts of this editor about work to be done at home, is certainly entitled to the most serious consideration by every Member of the House.

Economy in Government

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ARTICLE FROM THE BRIDGEPORT (CONN.) TELEGRAM

Mr. DOWNS. Mr. Speaker, acting under permission granted me, I wish to insert the following article in the Appendix of the RECORD, taken from the Bridgeport Telegram, Bridgeport, Conn., of May 7, 1941:

[From the Bridgeport (Conn.) Telegram of May 7, 1941]

ECONOMY IN GOVERNMENT

Private citizens are warned that they will not be permitted to buy new cars as freely in the future as they have in the past—the manufacturers will not be permitted to make them—and that they must be prepared to do without many other luxury items and to pay higher taxes on some of the things commonly used.

In other words, the people must pull in their belts, make sacrifices, and prepare to take this war seriously.

But is the Government prepared to make sacrifices? It is not, and that's one reason why so many people are ready to say to the politicians from President Roosevelt down, "It's time you set the example and stopped lecturing others."

For the Government of the United States does not propose to curtail its own extravagance in any way, shape, or manner. In addition to all the extraordinary cost of national defense, we are carrying at the same time an extraordinary Budget in history for nondefense expenditures.

There is hardly a fiscal expert of any kind who thinks it will be possible to stagger along forever under that double burden. But Mr. Roosevelt and all his department heads set their jaws like grim death when it is suggested that they should curtail any of their pet expenditures.

On the basis of the President's Budget message we are spending this year 6.5 billions for national defense and 6.7 billions for nonmilitary purposes. Next year it is proposed we shall spend 7 billions for nonmilitary purposes instead of cutting down this wholly extraordinary, inflated, and unprecedented expenditure.

When the rest of the country is beginning to revise family budgets, to pay higher taxes, and to make other sacrifices for national defense it is just as well for the Government to be prepared for an all but unanimous demand for some comparable action on the part of the Government itself.

The public is growing distinctly tired of being lectured at by a Government which says, "Do as I say but not as I do."

Echoes From Roosevelt's Jackson Day Speech

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

POEM BY HORACE C. CARLISLE

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Mr. Horace C. Carlisle, of Alabama:

ECHOES FROM ROOSEVELT'S JACKSON DAY SPEECH

While Democrats were celebrating
Their Jackson day, throughout the States,
The President ceased meditating
Upon the cruelties and hates
With which, across the troubled waters,
The warring Old World has to cope,
To join the New World's sons and daughters
In thanks to God for faith and hope.

Where there's no vision people perish—
Tho we have felt His chast'ning rod,
We have a hope that our hearts cherish—
We have a vision still of God—
It matters little to us whether,
Or not, our ways are understood
By others, since all things together,
Here and hereafter, work for good.

Tho we, thank God, have no dictator,
We know, if we sit down and wait,
That we may be run over, later,
By Hitler, whose own heinous hate
For freedom, liberty, and honor,
Has transformed Germany, that stood
With heaven's smile once resting on her,
Into a land athirst for blood.

If our kind of civilization
Should get run over, and destroyed,
The peace we seek, with expectation,
Will never be by us enjoyed;
Hence, it's become more clear than ever
That these momentous times demand
More courage and more real endeavor
To safeguard our beloved land.

We count it as "a thing of beauty,"
That special honors we've conferred
On Andrew Jackson, who put duty,
Regardless of what it incurred,
Above his own desires and pleasures,
That he might execute his plan
To render, in the fullest measures,
Real service to his fellow man.

In Jackson's time, the threatened danger
Came to the Union from within,
In his own section, where no stranger
Would dare such danger threats begin.
Tho, in our day, the threat, disturbing
Us, comes from far beyond the foam,
We fear that we have failed in curbing
Its terrorizing spread at home.

Before the day of Jackson, surely,
Two parties in existence here
Kept Liberty enthroned securely,
Which we, unto this day, revere;
And tho these parties fight each other,
Soon as election day is o'er,
Their diff'rences they quickly smother,
And work together as before.

Dictatorships hold in derision
The party principle; for they
Know that if with them such division
Existed, they'd be swept away—
So, in the lands ruled by dictators,

The common people are controlled
By merciless intimidators,
Who make them do what they are told.

Lest any should become his foeman,
And stir the great dictator's wrath,
They see that every man and woman
Walks in the straight and narrow path
Prescribed by dictatorial bosses,
And all of them are forced to bear
Upon their shoulders cruel crosses
Until they perish in despair.

Last year we held here an election,
And afterward the candidates
For President, upon reflection,
Accepted willingly their fates—
United in the undertaking
Which all of us are praying for,
They dropped their differences, forsaking
Them until ends this awful war.

We're writing now on hist'ry's pages
That, as Americans, we will,
Year after year, down thru the ages,
Hold honest, free elections still—
For freedom, liberty, protection,
And justice, all, depend upon
The sanctity of free election,
Backed by the prayer, "Thy will be done."

In just elections there's no trifling—
To buy votes vilifies success—
There should be left no chance for stifling
The innate freedom of the press,
Of speech, and of the air, and surely,
As long as we traverse the sod,
We should dwell here, endowed securely
With freedom, yea, to worship God.

These principles are God's creations,
And all of them now, everywhere,
Are threatened by dictator nations.
Broadcasting death and dire despair,
Ours is the great task of defending
These principles of freedom, whose
Existence freedom's foes are ending
In such ways as dictators choose.

These living principles of merit,
Real safety-first guards of the home,
Our children's children should inherit,
And pass on, thru the years to come—
Oh! let us ask ourselves, sincerely,
How long could we the strain withstand
If freedom, which we prize so dearly,
Should vanish from our peaceful Land?

If such an evil time should ever
Befall us, we'd no longer hold
Delightful gath'rings—but never
Will we by Hitler be controlled—
Americans have weighed these questions—
Our spirits spurn what they imply—
Our courage rises when suggestions,
Like these, bedim our peaceful sky.

Now, since America has spoken,
Republicans and Democrats
Consider it to be a token,
To them, like skillful acrobats,
To end all petty party quarrels,
And stand, united in this cause,
That we may win earth's choicest laurels,
And heaven's heartiest applause.

Democracy's arch foes are trying,
By fair and foul means, to destroy
Our faith in God, but we're relying
On it to be our safe convoy—
Their weapon is false propaganda—
Our weapon is our faith to fall
In line behind our Lord, Commander
Of earth and sky, the Lord of all.

Tho Communists are with us, preaching
The gospel of unfounded fear,
The lives our people live are teaching
God's truth thruout this hemisphere—
Let Hitler spread his propaganda—
Tho his deceptions never cease,
He'll fall before our Great Commander,
On bended knee, and sue for peace.

Back in the dim receding distance
Of Nature's unreturning past,
No nation's maintained its existence,
With faith in God too weak to last;
And, in the long march of the ages,
No nation, dwelling on the sod,
However, great a war it wages,
Can last, devoid of faith in God.

Brave Lincoln answered war's grave questions,
As dauntless Jackson did, with deeds—
Both of them followed God's suggestions,
And freely He supplied their needs.
Why should Americans fear trouble?
If we have faith enough to pray,
Effectively, to God to double
Our strength, He'll double it each day.

Our well-considered, persevering
Attainment of enduring peace,
Which to our spirits was so cheering,
Passed like the light with day's decease;
But when this new World War is ended,
May every nation of the sod,
Whose stay on earth shall be extended,
Resolve to keep faith with its God.

—*Horace C. Carlisle.*

Decentralizing Washington

EXTENSION OF REMARKS
OF
HON. ANTON F. MACIEJEWSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

Mr. MACIEJEWSKI. Mr. Speaker, the idea of decentralizing Washington is spreading rapidly. I mention this for the reason that during the past several days editorials have appeared in the Chicago Daily News advocating the removal of the United States Department of Agriculture to the city of Chicago.

We all know that in recent months Washington has been transformed by the defense program into one of the country's congested cities. By moving out of the city into an area of the country where its principal business is transacted the Department of Agriculture, the Government could acquire immense office buildings and could, at the same time, partly offset the general overcrowded condition that prevails in the Capital City today.

Chicago, it is believed, is the natural location for such department for the reason that within 500 miles' radius of that city the fertile fields of America produce more foodstuffs than any similar area anywhere on earth. As a matter of fact, barring Russia, no nation in the world produces as much farm products as this area yields.

I cite these facts not to remind you of the blessings of nature, but as one of the factors bearing upon the contention that the United States Department of Agriculture belongs in Chicago.

Here are some further items in the case: In the entire United States there are 325,000,000 acres of farm land. In the 500-mile area about Chicago are more than 120,000,000 of those acres. That is nearly 40 percent of the total. Adding Nebraska, Kansas, the Dakotas, Oklahoma, Arkansas, Mississippi, and Texas—all important farm States nearer Chicago than Washington—and the total jumps to more than 60 percent. In farm income the area is equally important. The total farm cash income in the United States in 1939 was $8,200,000,000. Of that, farmers within 500 miles of Chicago collected just under $3,000,000,000.

In view of these facts, it would seem the movement to decentralize Washington should be furthered and the United States Department of Agriculture removed to Chicago.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

RESOLUTION BY LA CROSSE (WIS.) COUNTY BOARD OF SUPERVISORS

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following resolution passed by the County Board of Supervisors of La Crosse County, Wis., at their regular monthly meeting held on May 6, 1941:

This resolution is in opposition to convoying merchant vessels across the seas and in opposition to any and all acts by our Government involving our country in the European conflict.

The resolution also recommends that Congress fix the prices of commodities and articles of universal use and necessity in conformity with the ability of the consumer to pay; and that there shall be no profiteering at the expense of the consumer of such necessities of life.

The La Crosse County Board of Supervisors also expressed their opposition to the present low price ceiling placed on farm commodities as unfair to the producer; and further recommended to Congress that farm prices be so fixed as to insure parity and thus insure the welfare of all the people of our Nation.

I want to commend the action of the La Crosse County Board of Supervisors in adopting the following resolution and I recommend their action be followed by all county boards in the entire United States: The resolution of the La Crosse County Board of Supervisors follows:

Resolved by the County Board of Supervisors of the county of La Crosse, Wis., That we instruct and recommend to our Representative in the Congress of the United States that we are opposed to the proposed plan of convoying merchant vessels across the Atlantic Ocean as a part of the national participation in the present European war, and that we are opposed to any and all acts by our Government that may involve this country in the conflict.

That we request and recommend that during these times that the prices of commodities and articles of universal use and necessity be fixed by act of the Congress or administrative authority in conformity with the

ability to pay, and that there shall be no profiteering at the expense of the consumer or purchaser of all such necessary commodities and articles of use in our daily lives by the placing of a maximum selling price upon all such commodities and articles of necessity and use.

We also express our opposition to the present low ceiling placed upon all farm commodities, as unfair to the producer, and we recommend that the prices be so fixed as to insure parity with all other merchandise and articles upon the markets and which are necessities to the welfare of all the people of our Nation.

STATE OF WISCONSIN,
County of La Crosse, ss:

I, Esther M. Domke, county clerk of the county of La Crosse, do hereby certify that the above and foregoing resolution was duly adopted by the County Board of Supervisors of La Crosse County, at the regular monthly meeting, held May 6, 1941.

ESTHER M. DOMKE,
County Clerk, La Crosse County, Wis.

The Role of Motor Transportation in American Life and American Preparedness

EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

Mr. WINTER. Mr. Speaker, the cost of the gasoline is the largest factor in the direct cost of operating a motor vehicle. It is significant, therefore, that the service-station price of motor fuel, excluding taxes, has been more than halved since 1920. The quality of the motor fuel, of course, has improved to such an extent since that time that there is no unit adequate to measure the full degree of improvement. The resulting extensive development of motor-vehicle ownership and use has been made possible by this constant reduction in the cost and the ever-improving quality of the fuel.

The reduction in the cost of motor fuel to the consumer, however, would have been even greater but for the fact that the States and the Federal Government have been imposing taxes on gasoline at ever-increasing rates. At the present time, the average tax rate on gasoline sold in 50 representative cities throughout the Nation represents a sales tax of nearly 50 percent.

Now it is proposed that the Federal Government increase the present Federal gasoline tax rate of 1½ cents a gallon to 2½ cents a gallon. This will serve further to increase the direct cost of operating motor vehicles. It is important in weighing the advisability of such an increase in rate to consider how important is the motor vehicle not only to the everyday life of the average American, but also to the national-defense program to which we now are devoting so much of our effort and attention.

Before the last war the automobile was termed a pleasure car in this country, and no one thought the term inappropriate. But great advances have been made in the American way of living since that time. The standard of living in this country not only has caught up with the automobile but also has passed it to the extent that the automobile no longer is a pleasure car—it is the American family's fundamental mode of transportation. The automobile today is used primarily for business and other necessity trips.

Of course workers for some time now have been dependent on private automobiles to get them back and forth to work. This has been true because large industrial plants oftentimes are situated outside city limits and beyond the routes of mass-transportation lines. Workers accordingly have ridden to work in their own private automobiles or in the automobiles of their neighbors.

With the initiation of the national-defense effort, the worker has become several times more greatly dependent on the passenger car to get back and forth to work because of new factors which have developed. Workers now have to contend not only with plants that naturally are situated on the outskirts of town but also with plants that purposely are situated at considerable distances from business and residential centers to spare these centers from bombing attacks aimed specifically at the plants. Furthermore, the scattering of plants making defense materials in diversified parts of the country, some which never before have experienced industrial activity, to avoid concentrations that might make easy bomb targets also has been a definite part of the defense program.

The effect of such plant locations is twofold. Those defense workers living in nearby residential areas now have farther to travel to get to their jobs and back. But even more important, those plants that for strategic reasons are situated in areas where previously there had been no industrial production must draw their workers from great distances because of the shortage of skilled workers in the immediate neighborhood. The resulting great influx of workers invariable results in housing shortages. Those workers that can obtain homes in the neighborhood are exceptionally fortunate. Others may be forced to seek homes in towns and residential areas at least 20 miles distant. To these workers the automobile is indispensable in getting to their job of rearming America.

There are many such instances which already have been studied and recorded. In Charleston, Ind., a town with a normal population of 936 inhabitants, a new smokeless gunpowder plant of 450 buildings, representing an investment of $92,000,000, is being established. Simply to construct these buildings about 23,000 workers, a number of people 25 times greater than the town's normal population, was required. Obviously there was not adequate housing for these workers. Fortunately, because of the automobile, many of these workers could be quartered in neighboring towns, some as far as 35 miles away. Each day some 3,000 cars brought these workers to their jobs. Once the plant is built and thousands of workers are engaged in the production of the gunpowder, the same story of dependence on the automobile will be repeated.

In Seattle, Wash., many thousands of workers are busily engaged in shipyards and airplane plants. Evidence of the housing shortage is the automobile-trailer city on the outskirts of the town. Surveys have shown that at one airplane plant 9,000 workers daily arrive at their jobs in 3,000 private automobiles, many of these coming from localities 40 miles away. That means they must travel 80 miles a day to earn a living and do their bit in the preparedness program.

This same story is told even in the larger cities. In Buffalo, N. Y., there are 2 aircraft factories that are served only to a limited extent by mass transportation lines. One $20,000,000 plant actually is situated far from any mass transport service. At Flint, Mich., a survey of workers in 5 automotive plants, which to a greater and greater degree are turning to defense production, disclosed that fully 50 percent of the employees drive their own cars to work and another 20 percent ride with them as passengers. Those riding in private cars average an 18-minute drive from their home to their job. At Saginaw, Mich., it was found that 71 percent of the city's industrial employees rode to work in private cars, with 1 in 10 driving at least 10 miles to work daily.

The tiny town of Kittery, Maine, could not accommodate the 2,000 additional civilian workers who have taken jobs in the navy yards during the past year. However, the automobile is bringing men in from a wide area. Boston, 57 miles away, is furnishing daily commuters to the navy bases.

Probably the most outstanding example of the dependence of workers on their automobiles is found at the new Diesel locomotive plant outside of La Grange, Ill. There every single employee comes to work in his own or his friend's automobile. Their living places are scattered widely. Many come from the suburbs of Chicago, 30 miles away. The nearest point of mass transportation is 2½ miles from the plant.

Though most family automobiles are used primarily for driving to work or on business rounds, they are also used on a multitude of other duties vital to the best welfare of family life. It may be said that to a large degree the average family's basic standard of living is dependent on its automobile.

Perhaps the best example of the degree to which the automobile has extended the horizon of the average family's everyday world is found in the dependence on the automobile for shopping for the necessities of life. Surveys of farm family shopping habits have found that one-third of those interviewed would not be able to get to their principal shopping points by any means other than the family automobile. Without their car, 43 percent of the families said they would abandon their secondary shopping centers.

Other surveys have reported their results somewhat differently. They have found, for example, that six out of every

seven family cars are needed for the family shopping; that virtually all of these six are so employed at least once a week, and two-thirds of them even more often. A very high percentage of shopping was found to be done at considerable distances from home—more than two-thirds being done more than a mile away. Among the car-owning farm families 71 percent must travel more than 3 miles to do their marketing.

These conditions exist, of course, because mass transportation to marketing centers not only is unavailable to get to industrial and marketing centers from outlying districts but also in many instances is unavailable within these centers. A survey of the intraurban transportation facilities in the various cities shows that there are now 2,100 cities in the United States that have no mass transportation system whatsoever, not even motor busses. These cities represent nearly two-thirds of all the cities in the Nation. The combined population of these 2,100 cities is nearly 12,000,000 people. The routine movements of this important segment of the national population in the cities are dependent on the motor car. It is probable that more than five times as many people residing in the rural sections are even more dependent on their motor cars for better than "horse and buggy" transportation.

But the motor vehicle is important to the defense effort not only in the transportation of people but also in the transportation of goods and materials by motor truck. Modern transportation by boat, rail, or air utilizes the motor vehicle at some point in practically every itinerary. Today 32,000,000 cars and trucks operate the year round on more than 3,000,000 miles of highways.

Today for every seven families in America there is a truck at work transporting food, clothing, and other commodities vital to their welfare. Increasingly these trucks are being utilized to speed up the national-defense effort and it invariably has been found that they can do exceptional service, once given the chance. Past experience already has shown that by affording speedy, flexible, and economical service, motor transport has changed the complexion of commerce, industry, and agriculture. The motor truck's adaptability, speed, and low cost likewise will enable thousands of industries engaged in the production of defense materials to gear it intimately into their operations and thereby enable them to do a better job faster.

The United States census has shown that there are more than 48,000 communities in this country which are not served by the railroads. The bulk of these communities are engaged in economic activity that is fundamental to our strength as a Nation. Their only connection with the other centers is by motor transportation and they depend almost entirely upon trucks for the transportation of their food and their other goods. But even the larger centers also are dependent to a great degree on the motortruck for their food. During 1939 motortrucks hauled 53 percent of the livestock, 40 percent of the fruit and vegetables, 65 percent of the poultry, 39 percent of the eggs, and 27 percent of the butter received in all the major markets throughout the country.

The advantages of motortruck transportation once it has attained even higher stages of development, for it is not yet full grown, readily may be visualized. Its full value to the national-defense program which must reach its objectives in the shortest possible time easily can be imagined.

It is believed that the further increases in the tax rates on the motor fuel consumed in the motor vehicles, which are so fundamental not only to normal livelihood but also to our national effort to prepare for an emergency, would not best serve our national welfare. It is believed that the increase in motor fuel tax rates unnecessarily would increase the cost of motor fuel, which is such an important factor in motor vehicle operating costs, and thereby discourage the fullest possible utilization of motor transportation. Yet the fullest utilization of motor transportation is most necessary if the job on hand is to be done and to be done in the shortest possible time.

An Honest Representative

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of yesterday:

[From Washington Times-Herald of May 8, 1941]

AN HONEST REPRESENTATIVE

Chief Justice Charles Evans Hughes is by all odds the most dignified member of the Supreme Court. A paragon of august reserve, he can sit for hours listening to arguments without once changing expression. It is the younger Justices, Hugo Black and William Douglas, who lead in the court's occasional smiles.

But the dignified Chief Justice broke down the other day and treated himself to a hearty belly laugh.

Representative JOHN TOLAN, of California, as a friend of the court, was arguing a case involving the constitutionality of a California statute forbidding transportation of a pauper across the State line. Just before TOLAN appeared, the Court had been listening to a series of weighty arguments on due process, interstate-commerce regulations, and other dry legalisms.

The genial, white-haired Californian, who heads a committee investigating migrant labor conditions, quickly cleared the musty atmosphere.

"Now, I do not intend to discuss the issue of constitutionality in this case," began TOLAN. "Fact is, I don't know anything about the Constitution." Then, looking straight at Hughes, he added with a grin, "I've been in Congress too long."

Such frankness was too much for Hughes. Leaning back in his chair, he laughed until he shook.

The Highroad to War

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

LETTER FROM AMOS R. E. PINCHOT

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks I include the following letter from Mr. Amos R. E. Pinchot to Secretary Stimson:

MAY 8, 1941.

The Honorable HENRY L. STIMSON,
Secretary of War, Washington, D. C.

MY DEAR HARRY: You and I have been friends for many years; and, though our ways have parted since the old days, I have always thought of you as an able, honorable, and patriotic man. Yet as I listened to the measured sentences of your broadcast Tuesday night, I confess that I was shocked and deeply distressed. And I will tell you some of the reasons why.

1. Your broadcast began with a complaint against those who say you are trying to get America into war, who say you are a warmonger. Then you proceeded to call for convoying, which the President says will necessarily mean war. And you ended up with an exhortation to the youth of America to be ready to die in a war with Germany, which you virtually declared to be an accomplished fact, though Congress has never declared war.

2. You did not hesitate to base your plea for convoying on the incorrect allegation that American supplies cannot be delivered in sufficient quantity to Britain on account of the German U-boat blockade. On Wednesday, the day after your broadcast, Admiral Land, Chairman of the Maritime Commission, reported that out of the hundreds of vessels that have cleared from American ports only 8 have been sunk since the beginning of the year. He also reported that only 158 vessels, clearing from all ports of the world, have been sunk in 1941.

Harry, was that information available to you before your broadcast? If it was, you owe an explanation and, I think, an apology to every citizen of this country.

Why didn't you ask for convoying and war last summer, when Britain, as now, was calling on us for more planes and munitions, and when, according to your testimony before the House Military Affairs Committee, she was in such a desperate condition that her collapse and the seizure of her Navy by Germany was possible at any moment?

On July 31 you appeared before that committee and, after stating that we could no longer rely on our Navy and the Atlantic and Pacific Oceans for defense, you said:

"You, gentlemen, are the trustees of the security of the United States."

* * * * *

"A prudent trustee must take into consideration the possibility that in another 30 days Great Britain herself may be conquered and her shipyards pass under German control."

A few days later Secretary of the Navy Knox made a similar statement before the same committee, though he extended the period of possible collapse from 30 to 60 days.

Nevertheless, in the entire period between these prognostications and November 5, when the people went to the polls and reelected Mr. Roosevelt on his clear, categorical, and unconditional pledges of peace, neither you, nor the President, nor any man in the administration said a mumbling word in favor of convoys or any act by our Government that might involve us in war. And invariably all proposals to help Britain were coupled with the promise that, whatever happened, you people in Washington would do nothing that might result in war.

On October 30, at Boston, President Roosevelt told 22,000 cheering men and women:

"And while I am talking to you fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again. Your boys are not going to be sent into any foreign wars."

On many platforms he pledged no "intervention in foreign disputes," no "army, naval, or air forces to fight in foreign lands outside the Americas except in case of attack."

Now, since on Tuesday night, as Secretary of War, you said the things the President has not dared to say for himself, I ask you this question: What are the hidden forces, who are the people with a vested interest in war, what are the mysterious, unspoken considerations that, after the ballots were counted, so suddenly switched Mr. Roosevelt from the path of peace to the high-road of war?

Sincerely yours,

AMOS PINCHOT.

Film Rental Tax

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

TELEGRAM FROM ALBERT J. FINKE, OF PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

PORTLAND, OREG., *May 8, 1941.*

Hon. HOMER D. ANGELL,
House Office Building,
Washington, D. C.:

The proposed legislation now pending in Congress to provide additional revenue to finance national-defense program includes tax of 5 percent on film rentals paid by exhibitors to distributors. I realize and am in full accord with the national-defense program and expect theater industry to carry its share of expense. There has already been levied on theaters a 10-percent tax on practically all theater admissions. Theaters are now collecting this tax. New proposed 5-percent film-rental tax, if passed, will result in staggering blow to theater industry. Distributors will pass it on to exhibitors. The exhibitor has no way of passing it on to public with result that burden will be upon exhibitor, and will be, in fact, a discriminatory sales tax that will change many theaters into losing propositions and force some theaters to close. This tax will result in cost to Oregon exhibitors alone in excess of $125,000 a year, a burden which we exhibitors will not be able to carry. At a meeting of exhibitors' organization of our State it was unanimously passed that your assistance be enlisted to eliminate this 5-percent tax on film rentals. We will greatly appreciate your help.

ALBERT J. FINKE,
Hamrick Evergreen Theaters.

Sugar Beets and National Defense

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

LETTER FROM PRESIDENT OF AGRICULTURAL ENGINEERING FOUNDATION AND ADDRESS BY PRESIDENT OF UNION SUGAR CO.

Mr. ANDERSON of California. Mr. Speaker, as the representative of one of the most important sugar-beet-producing areas in the United States I am vitally interested in the future of this highly specialized industry. This subject is deserving of the utmost consideration from the Congress of the United States at this particular time due to the fact that unsettled conditions throughout the world are seriously threatening our off-shore sugar supply.

I have never subscribed to the present policy of permitting the American sugar industry to produce less than one-third of the sugar that is consumed in the United States. I cannot subscribe to the action taken by the Department of Agriculture in reducing sugar-beet acreage throughout the country by 170,000 acres this year. The American beet grower and processor will suffer as a result of this move, and the American public will pay the bill.

The following letter from the president of the Agricultural Engineering Foundation and the speech by the president of the Union Sugar Co. are timely and pertinent. I wish to submit them for the consideration of the Congress:

AGRICULTURAL-ENGINEERING FOUNDATION,
San Francisco, Calif., April 17, 1941.

Hon. JOHN Z. ANDERSON,
Washington, D. C.

MY DEAR CONGRESSMAN: We fully agree with the Agricultural Study Committee that—

"It is imperative for Congress to work out an affirmative and constructive approach to the rescue of agriculture from the dangers which menace the farmers. It is one of our gravest problems, and upon our efforts in behalf of the farmers will depend in a large measure the future prosperity, if not the very safety and security, of the whole Nation, as well as our national-defense program."

In our opinion the greatest menace to the welfare and prosperity of the farmers—the safety and security of our Nation and the success of our national-defense program—is the quota that has been placed upon the production of beet sugar within the continental United States, therefore removal of the quota is imperative—

1. Because sugar is an indispensable part of the daily diet of every family and supplies more energy, at less cost, than any other food, there should be an abundant supply at the lowest cost—but according to Milo Perkins, president of the Federal Surplus Commodity Corporation, United States Department of Agriculture, in an address at Des Moines, Iowa, February 14, 1940, he in substance said: "The 65 percent of our families, approximately 80,000,000 consumers, living on an average of $69 a month, need twice that much income for a minimum standard of living. Remember that millions of youngsters we are pumping into our own society on 5 cents a meal—innocent victims of malnutrition—make mighty poor citizens."

It is obvious that we are not producing enough sugar within the continental United States to supply our own people with an adequate sugar diet, and should we get into war our sources of sugar from island possessions and Cuba could be destroyed by the enemy or in transit, and the result would be that our 80,000,000 consumers in the low-income brackets would be the first to suffer.

2. Because sugar is indispensable in the manufacture of many essential foods, drugs, and chemicals, that every consumer needs and must have, and the very things that the Federal Government now proclaims are of the most vital items for our national defense, an adequate supply of beet sugar at low cost is imperative.

3. Because the production of beet sugar, both in the field and factory, operates substantial markets for all lines of local industrial goods and services, thereby increasing the wealth and commerce of every district in which beets are grown.

4. Because soil exhaustion is the greatest and most serious menace to the welfare, safety, and independence of our Nation, and while our Army and Navy can defend our land from foreign invasion, it will require the combined support of every Member of Congress to defend our soils from exhaustion and our consumers from malnutrition, by the removal of the quota on the production of beet sugar.

There is no element of the soil in beet sugar as it is solar energy in its purest and most beneficent form. On the contrary with every bushel of grain or other crop taken off the farm at least 25 percent is soil fertility, a total loss. While by feeding the beet tops and pulp we can return to the soil all of the fertility that the beet has taken out, and thereby increase the quality and lower the cost of all crops in the interest of public health.

Therefore for the welfare of our farmers—for the safety and security of our Nation—and to maintain our national-defense program—will you use your best efforts to remove the quota on beet sugar and expand its production within the Continental United States, and thereby eliminate the menace of malnutrition, and soil exhaustion, and at the same time make the United States an exporter of sugar, which the world will need if this war continues.

Enclosed herewith copy of the speech of Mr. Roland Tognazzini, president of the Union Sugar Co., before the San Francisco Advertising Club, April 9, 1941, and which I am sure you will find very interesting and instructive.

Yours very truly,

AGRICULTURAL ENGINEERING FOUNDATION,
By OSWALD WILSON, *President.*

CALIFORNIA BEET SUGAR INDUSTRY—ITS GROWTH, ITS EXPANSION—WHAT IT MEANS TO CALIFORNIA AND TO THE NATIONAL DEFENSE PROGRAM

(Speech by Roland Tognazzini, president of Union Sugar Co., before San Francisco Advertising Club, April 9, 1941)

HISTORY

The history of the beet-sugar industry can well be said to be cloaked in one word—blockade—a word only too well known in this present day of submarine, surface, and aerial blockade. Although it was a German chemist who proved in 1747 that the beet contained a sugar identical with sugar from cane, it was not until the time of Napoleon that the modern beet-sugar industry received its start. Napoleon became interested in beet sugar when the supplies of sugar which France normally received from her colonies in the West Indies were cut off by the English blockade. With a population clamoring for food, Napoleon determined to become independent of overseas shipments, and to achieve this independence he "resolved to transport the colonies to Europe" by developing in the temperate climate of France substitutes for those things which theretofore had been grown only in the Tropics. Convinced that the beet was an efficient producer of sugar, Napoleon in 1811 ordered thousands of acres planted to sugar beets as quickly as possible, and set up six experimental stations at which instructions in beet culture were given to farmers and landowners. With this stimulus the sugar beet and its culture has spread to every nation in the Temperate Zone.

Turning to the United States, it was not until 1870—in California—that the first successful beet-sugar factory was erected. Credit for this success belongs to E. H. Dyer, and the location of his success is just across San Francisco Bay—at Alvarado. So it can be said that California is responsible for the first successful beet-sugar factory. Of momentary interest is the fact that during this period of growth California even had a plant built to make sugar from watermelons. It was not until 1888, at Watsonville, that the second successfully operated beet-sugar factory was built by Claus Spreckels. You have already been introduced to my good friend and competitor, Carl Maroney, general manager of the present-day Spreckels Sugar Company, who is responsible for the operation of factories at Woodland, Manteca, and Spreckels. In 1870, the initial year of beet-sugar production in California, 5,870 one-hundred-pound units were produced. By 1900 this figure had been increased almost one hundred times, and by 1917 California production exceed 4,000,000 bags. Through the 1920's California beet-sugar production fluctuated little. It was not until 1930 that California began its gradual climb to the top in the beet-sugar industry. By 1939 California had a record-breaking production in excess of 9,000,000 bags, or roughly 27 percent of the total beet-sugar production in the United States. During this period, in addition to the factories already mentioned, we now find California beet-sugar factories located at Oxnard, Hamilton City, Dyer, Tracy, Clarksburg and, of course, Union Sugar Company's plant at Betteravia in Santa Barbara County. The combined daily capacity of these factories totals 22,100 tons, or a potential daily production of 70,000 bags of sugar.

AGRICULTURE

California has been the leading sugar-beet producer in the United States since it took the lead from Colorado in 1938. Of the total acreage planted to sugar beets in the United States in 1940—some 990,000 acres—California had a total of 182,000 acres. For a better understanding of what this means to California agriculture it is necessary to consider the sugar-beet cycle. Late in the fall or early in winter the farmer is arranging to sign a contract with one of the five California beet-sugar companies to sell the beets he will be harvesting anywhere from July through December of the following year. Thus it is apparent that the method by which beets are purchased is unique in agriculture, for a basis of cash payment is agreed upon before the seed has even been sown. Once the farmer has contracted with the sugar company, work really begins, for there are many operations involved in the growing of sugar beets. Prior to planting, it is necessary to prepare the land, which involves plowing, fertilizing, leveling, etc. Planting begins in late December and may continue into April of the following year. The seed is planted in solid rows, and after about a month it is necessary to begin the blocking and thinning of these rows, which finally results in the transformation from a solid row of seedlings to a row composed of individual beets. From this stage to the time the beets are harvested, it is necessary that they be hoed, weeded, cultivated, and irrigated. During the harvest those beets grown within a reasonable radius of the factory are hauled directly by truck and those from outlying districts by rail. After arrival in the factory yard, they are thoroughly washed and then sliced into small thin strips, resembling shoestring potatoes, from which the sugar is extracted. At this stage there are two products, one, the juices containing what ultimately results in refined sugar, and the other which is made up of the exhausted strips of beets, or beet pulp. Now that the sugar-beet cycle has been considered, we are in a better position to discuss the importance of the sugar beet to our California agriculture.

It has been said that the sugar beet makes better farms. You may, with justification, ask why? It is a common observation that yields of other crops improve where sugar beets are grown. The sugar beet demands and effects a progressive mode of diversified farming. How the sugar beet beneficially affects other crops involves an understanding of the general principle of crop rotation. This universal basis for successful agriculture consists of growing three classes of crops in sequence: (1) cultivated, or intertilled crops; (2) small grain crops; (3) grasses of leguminous crops. A cultivated crop usually means such crops as sugar beets, corn, potatoes, cotton, tobacco, and garden vegetables. A cultivated crop requires a loosening of the earth around the plant, which improves the soil condition, destroys weeds and prevents their reseeding and dispersion. The form and nature of the sugar beet, and the sugar cycle itself explain why general farm conditions improve where sugar beets are grown. The root system of the sugar beet penetrates the ground to a depth of 6 or 7 feet, a mechanical disturbance beneficial in itself. The greater part of the tap-root system must remain in the ground, and with decomposition it contributes to fertility. Once the sugar has been extracted, since it contains no vegetable matter, the entire remainder of the beet may be put to economic uses. This is accomplished by feeding the vegetable portion of the beet to cattle and lambs. These vegetable byproducts are converted into meat and milk, and what is not sold in these forms is returned to the soil as manure. It has been demonstrated that the byproducts alone of an average acre of sugar beets exceed in feeding value the entire product of an average acre of corn. These byproducts are beet tops, beet molasses, and beet pulp. Beet tops consist of the leaves and a part of the crown of the beet, containing useful salts. They are a protein, or growth-promoting feed, and are available immediately after the harvest. Beet pulp, either wet or dry, is a carbohydrate feed. It consists of the slices of the beet which remain after the sugar has been extracted. The molasses is often mixed with dried beet pulp. Through the use of these byproducts the farmer is enabled to conduct a better livestock operation, and in so doing maintains soil fertility. This is the part the sugar beet plays in California agriculture. But in addition to this we must consider the fact that the grower's 1939 returns for a ton of beets in California was approximately $7 per ton, or a return of over $100 per acre—assuming 15 tons to the acre to be an average yield. In other words, this meant a return to California beet growers of well over $17,000,000. In some years beet-sugar farmers in the United States have had a return of as high as $100,000,000.

ECONOMY

Much has been said in recent years about the proper use of land, the need for crop rotation, the integration of agriculture and industry into a common purpose. Those who know the beet-sugar business see in it that proper fusion and balance of agriculture and manufacture which achieves the perfect economy. From the planting of the seed to the final production of pure sugar, the beet cycle is continuous and complete. Each stage is dependent upon another. Each succeeding operation supplements the one before. During its 6 months in the ground the beet stores up energy taken from the sun, air, earth, and water. During its 24 hours in the factory, the beet is separated into its useful parts. Man gets sugar. Animals receive pulp and molasses. The land obtains fertility through the animal. Nowhere is there waste. The conditions of life in scores of communities in the United States are directly affected by the prosperity or lack of prosperity in the beet-sugar industry. Approximately 100,000 farmers grow beets each year on close to 1,000,000 acres of fertile lands, such as in our Sacramento and San Joaquin Valleys, as well as the fertile coastal valleys of Salinas, Santa Maria, and Lompoc. Sugar beets provide more employment per acre than any other major farm commodity. Not only do we have around 100,000 farmers engaged in growing beets, but we must also consider the fact that the production of each crop requires the employment of some 150,000 field workers. Factories and offices account for tens of thousands of additional workers. We must not overlook the fact that beet sugar stimulates employment in dozens of related industries.

For every pound of sugar extracted from beets, 1 pound of coal must be mined, one-half pound of limerock must be quarried. That means the industry consumes each year approximately 1,500,000 tons of fuel and 750,000 tons of lime. Cotton planters grow thousands of acres of cotton to be woven into bags, bag liners, and filter cloth. It has been said by accountants that an average acre of sugar beets produces $35 of railroad revenue—or an annual freight bill of, roughly, $35,000,000. The $35 derived from an acre of sugar beets is several times the average amount which railroads receive from any acre growing any other major food commodity. Other millions of dollars are expended annually by the industry for such things as coke, farm and factory machinery, automobiles and motortrucks, fuel and lubricating oils, gas, chemicals, etc., all of which contribute directly to our economy. To be brief, sugar-beet fields and beet-sugar factories are economic units which extend their benefits far beyond their immediate area, benefits which increase with any growth of the industry. How greatly they might be enlarged is evidenced from the fact that the production of beet sugar in the United States could be increased fourfold without creating a supply exceeding the consumption requirements of the Nation.

The beet-sugar industry has demonstrated its worth under the most trying conditions, and it invites comparison, on a basis of efficiency, with other producers supplying sugar to the United States. In any comparison, the two most important points are the yield of sugar per unit of area, and the number of man-hours of labor required to produce the finished product. The United States Tariff Commission, in its last investigation of the sugar industry, established that an acre of beets in the West produces substantially as much sugar as an acre of cane in Cuba or the Philippine Islands, which are major sources of the American cane sugar supply. Moreover, the production of a ton of refined beet sugar requires no more man-hours of labor than a ton of refined cane sugar. Thus, if lower costs in these tropical areas are not the result of a measurably greater yield of sugar from the same unit of land, or of less labor required to produce the finished product, then the answer must lie beyond any reasonable definition of efficiency. A logical explanation arises out of the statistics of the Commission: Lower costs in the Tropics are definitely the result of differences in standards of living, and not the result of any fancied advantages in production or manufacture. Higher land values, higher farm costs, higher wage rates in field and factory, higher taxes paid by both farmer and processor, the blessings of schools and roads—these are the factors that account for higher production costs in the United States than in Cuba or the Philippines. Yet, who would change them? For they reflect the American standard of living and the American economy.

NATIONAL DEFENSE

Today we are faced with the most gigantic job that has ever confronted this country. The job consists of building and producing to the point where we can support not only ourselves in our essential national defenses, but also other nations in need. This effort takes a tremendous amount of energy upon the part of everyone in this country. Shifts working 24 hours a day consume more energy than shifts working 8 hours a day. Four million men in our Army will expend much more energy than the same four million men would in ordinary walks of life. In order to have and utilize this energy, this country must have energy-producing food and the foremost energy-producing food is admittedly sugar. This being the fact, what is the outlook for this vital product? How do we stand regarding our reserve supply of this indispensable ammunition? At best, questionable. This essential product is fast becoming scarce in the United States, with already a rise in price. I predict that, within 12 months, there will be an actual shortage. But what has this to do with the defense program? It is past history that 25 years ago we were involved in war; and what happened then? There was a tremendous shortage of sugar. Why? Because of the great shortage of merchant-marine tonnage due to its destruction, and the removal of tillable beet-sugar acreage in Europe, amounting to some 5,000,000 acres, which, converted into bags of sugar, amounted to roughly 200,000,000 bags. Thanks to our domestic beet-sugar industry we were able during that period in this country to have a small amount of sugar which was rationed to us. The scarcity of sugar throughout the world brought the price to 26 cents per pound as compared to the present day 5 cents per pound. And the 26-cent level was reached, not during the war, but in the year 1920. The repercussions of war are not found during its progress but years afterward. Today we are faced with a similar dilemma, and what have we done to make ourselves self-sufficient? Very little. At the induction of this administration into office in 1933 the Triple-A program was adopted, the theory of which was to reduce surpluses by the destruction of economic wealth; in particular the destruction of pigs, wheat, corn, and so forth. Beet sugar, however, was not one of the surpluses. To the contrary—far from it. This New Deal economic theory has been referred to as "the economy of scarcity." Nature, in order to show the futility of man, thereafter visited the Midwest with the severest drought ever experienced, resulting in economic and human catastrophe.

In addition, the Supreme Court declared the triple A program unconstitutional. Undaunted by this experience, the present Sugar Act was adopted in 1937 and has as its basic theory the zoning of various cane- and beet-producing areas. The primary result of this is that continental beet production in the United States is given an allotment of 23.19 percent and the continental cane 6.29, for a total only of 29.5 percent of the yearly estimated sugar consumption in the United States. By comparison in this zoning theory, Cuba is allotted 28.6 percent and the Philippines 15.41 percent, and so on down the line. In the fall of 1940 the beet-sugar industry produced 35,351,000 bags. The mainland cane area produced less than 10,000,000 bags of sugar. In all, mainland sugar production was less than 45,000,000 bags. This is to be compared to an estimated consumption for 1941 of 130,000,000 bags. You therefore see before you a program that, far from making this country self-sufficient in its most basic and necessary foodstuff, has brought us face to face with a potential scarcity to the point where we could be made practically destitute of sugar in the event foreign sugars could no longer be transported into our country. In this connection I need hardly remind this audience that daily and in ever-increasing numbers, ships are being sent to the bottom of the ocean, to the extent where it is admitted that approximately 9,000,000 tons have already found a watery grave. What is the full import of these sinkings? Simply this, that shipbuilding authorities state that within the next 12 months less than 1,000,000 tons of bottoms will be constructed. These large sinkings have and will continue to produce shortage resulting in the skyrocketing of merchant marine rates. By way of illustration the rate to haul raw cane sugar from the Philippines a year ago was $10 per ton. Today it is $35; from Cuba it was $2.40, and today it is $11. This trebling and quadrupling of freight rates would not be so serious if we could be assured of ships in which to transport sugar, but because of actual shortage, what bottoms are available have been and will be commandeered for the transportation of priority materials. The policy of the administration has been to protect foreign cane sugar on the theory that it was cheaper to import cheap cane raws. That might have been the case, but it is not so today, because as a result of the increasing freight rates and lack of bottoms, these cheap cane raws have become expensive cane raws. Consequently the refined product has advanced in order to permit the refiner to operate at a profit. If the beet- and cane-sugar industry in the United States had been permitted to have a normal growth, we would find ourselves today with a modicum of self-sufficiency and would not be confronted with skyrocketing prices, as happened in the last war, nor would there be fear of an impending scarcity of sugar. What is the administration doing? It continues to sit supinely by, advising the public that there is no shortage of sugar and that the price advances are unjustified. However, these authorities are very careful to refrain from indicating where this available sugar is located. I agree that there is no scarcity of sugar in Cuba and the Philippines, but I do ask, What good will sugar stranded in Cuba and the Philippines be to the consuming public in the United States?

Another vital foodstuff which is also becoming scarce in the United States is meat. I need hardly comment that high prices prevail, but as with sugar, boats are not available to transport the meat from South America to this country. But there is one way of continuing and increasing the cattle in this country and that is by feeding to them the byproducts of beet sugar, beet tops, beet pulp, and molasses, which are considered the most valuable foodstuffs for cattle. Molasses, in particular, plays an important role at this time of scarcity of cattle, since it materially increases the fecundity in the animal, with a resulting higher calf crop. But as in the case of raw canes, with cattle, likewise will foreign cane molasses be unavailable to this country because of a lack of "bottoms."

FINAL

What integral part is this industry playing or will it play in the national-defense program? This question, ladies and gentlemen, lies with your Government. If this administration will free the shackles from the sugar-beet industry, it can make this country self-sustaining in regard to this most important product. If nothing is done, history will needlessly repeat itself. It is, however, up to the public to become aware of this alarming situation and demand that the same be corrected. We are not asking for a subsidy but merely for the right to vigorously engage in free enterprise in order that a vital industry may do its part for the defense and economic welfare of this country.

Headlines From Various Newspapers Featuring Need of W. P. A. Employment

---

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following headlines from various newspapers featuring the necessity of W. P. A.:

No further welfare drop seen for city at present.—New Bedford Mercury.

Aldermen vote to eliminate W. P. A. lay-off.—Malden News.

Fears W. P. A. lay-offs will reach here.—Berkshire Eagle, Pittsfield.

W. P. A. cut news is due Friday.—Springfield Union.

Camp workers seek W. P. A. jobs—men laid off face lack of employment.—Boston Post.

Training course for jobless is requested.—Haverhill Gazette.

Welfare costs rise.—Lynn Telegram-News.

W. P. A. and relief rolls grow despite "boom."—Boston Traveler.

Further slash in W. P. A. forces looms.—Lawrence Tribune.

Skilled labor scarce, yet million in Nation seek W. P. A. jobs.—Boston Globe (feature story).

Mysterious W. P. A. lay-off affects 210 here, many with families.—Brockton Union.

Employment of Older Workers

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

RADIO ADDRESS BY HON JAMES M. MEAD OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me on May 8, 1941, on the subject The Older Worker Must Have a Job.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I welcome this opportunity to discuss some of the urgent problems facing the middle-aged and older workers of our country. As many of you know, President Roosevelt has proclaimed this week as National Employment Week. In his proclamation the President appropriately declared, "Despite great expansions in employment resulting directly from our vast national-defense program, the State and Federal Governments continue to be concerned with the problems of the older workers, many of whom still lack a place in industry. In the interest of utilizing all possible skills in our defense program I urge that employers review carefully their standards of physical qualifications to assure that these valuable workers are not barred from employment."

In thus speaking, the President, in my judgment, struck straight and hard at the very root of one of the Nation's fundamental economic and social problems.

Recently I introduced a resolution to provide for an inquiry into policies and practices which are discriminatory to our senior employables.

I have devoted considerable time and effort in this regard because I have felt for some time that the older worker has been getting all of the bad breaks insofar as employment and reemployment are concerned.

The employment problem of the older worker cropped up naturally with the advent of the machine age, with its mass production and speed-up requirements. Younger workers became more and more in demand because they were quicker, because they were capable of greater productivity, and because they were often more abreast of modern changes and innovations. This was a natural tendency, and one which offers some justification.

But this tendency of replacing older workers with younger men and women had its inevitable economic and social effects. Private companies tended to constantly lower their age requirements until it became a genuine difficulty for the man over 40 to land a new job.

Federal and State Governments, in many instances, obeyed the trend of the times and we found civil-service age requirements being constantly lowered. The man and woman over 40 discovered that they could not meet the age qualifications necessary for public employment. The field of opportunity continually narrowed. Demands for social legislation grew. Social security, unemployment insurance, old age assistance, employment on public works programs, and other provisions to assist this great group of jobless employables in the upper age brackets came into existence. Thus far, they have served a worthy purpose and most of this legislation will provide increased assistance as the years go by.

The fundamental question of whether the middle-aged and older worker could get a job, however, went unanswered. The depression of the early thirties threw millions of Americans out of gainful occupations. A plump proportion of this number were middle-aged and older workers. When the fog of depression lifted, they sought reinstatement in their old jobs. Thousands upon thousands of them never got their jobs back again. They were displaced with younger men and women when the time came to fill those jobs. Furloughed and dismissed employees in the older age groups were stunned with the unexpected realization that industry and government had no place for them.

As a result, they went on the relief rolls or into any type of temporary menial job that they could land.

Today, with the vast defense production program in full swing, these skilled older workers should be more in demand. So should the semiskilled and even the unskilled. Of the 3,000,000 additional workers expected to be employed between now and next autumn, undoubtedly a large number will be drawn from these older age groups. But, will this solve the dilemma of the older worker?

It has seemed to me that we ought properly to seek out all of the information obtainable in regard to this question. Once we have gathered all available information, we will be in a more favorable position to consider permanently helpful measures to correct conditions of discrimination.

My resolution directs the Secretary of Labor to investigate and to report to Congress on the nature and extent of age requirements and of physical qualifications demanded in both the public service and in private enterprise. It asks that a survey be made of the reasons for any restrictive employment policies and the extent to which these policies may be justified by differences in productivity, accident experience, workmen's compensation cost, the possible influence of group life-insurance coverage and private pension systems, and any other pertinent phase of the entire problem.

I am firmly convinced that the adoption of this resolution would result in the accumulation of evidence which would be vastly helpful in determining the need for and the character of possible future legislation. It would provide data not now available from any department of the Government or from any private source.

I have assured myself of the need for this type of information. Since the first of this year, I have communicated with the Secretary of Labor, the Office of Production Management, the Bureau of the Census, the Social Security Board, the Civil Service Commission, the Bureau of Labor Statistics, the Federal Security Administration, the Work Projects Administration, the commissioner of labor for New York State, over 50 of the Nation's leading private industries, and large numbers of private citizens conversant with this general subject. I am not going to attempt to report to you now the information I have received from these sources, but it is significant and I intend to present it to the Senate Committee on Education and Labor to which my resolution is referred. It bears out the contention that we are somewhat wandering in the dark on a problem of vast and widespread intensity.

Within recent months the country has become aware of a labor shortage that in many vital defense lines is becoming acute. The Employment Service has appealed to workers all over the country to register. Many firms, it is known, have relaxed hiring restrictions, including age limits, and where this has been done reports are coming in showing that the older skilled workers are again proving themselves productive, reliable, and regular in their attendance.

But in spite of the shortage and the appeals for skilled help, the flood of letters from older workers continues, complaining of the difficulties of securing employment even for skill that is in great demand. The United States Department of Labor has received a steady flow of such letters, and in recent months there has been an increase rather than a falling off—brought on seemingly by the fact that many who were encouraged by the appeals for workers have been disappointed at the factory gates. A large potential supply of workers possessing skills, capacities, and working habits that would render them valuable in an emergency like the present is still waiting to be tapped.

To relax age-hiring limits in favor of some other weeding-out process, such as medical examinations, is not a solution. Any general selective principle needs to be carefully applied in individual cases in order not to defeat the very purpose of selection.

In the race to put America to work for defense, apparently one group of people has been left behind—the older workers. Many of the men and women over 40 with a multitude of skills and a wealth of experience are still being turned down by industry because of age. While a large number of firms as well as Government arsenals and navy yards have relaxed age limitations in hiring policies, older workers in many cases are still turned away from the gates of industry.

The United States Department of Labor has urged these workers to register with the local Public Employment Service office. This Service is organized on a national scale to clear job information in all areas on defense work. The Employment Service can also refer people to short vocational-training courses, with special emphasis on defense industries, given today by the schools under the direction of the United States Office of Education, in cooperation with the United States Employment Service and the Work Projects Administration. Such courses offer an opportunity to the older worker to brush up on skills which may have become rusty. But when the Employment Service refers an applicant to an opening, it cannot prevent the personnel manager turning the applicant down because of age.

Discrimination against the older worker means a waste of skills. Such discrimination threatens morale when we need to prove that democracy works for everyone—old and young alike.

"A lot is being said these days," writes in one thoughtful citizen, "of the activity of 'fifth columnists' and subversive activities in these United States of ours, and perhaps these things exist and are growing more rapidly than we realize through the unwitting aid of thousands who are at heart loyal American citizens but who through adversity and want of work which they are able and willing to do are led astray by subversive propaganda." This man goes on to say, "I do not wish to pose as a crank or a calamity howler, but the fact exists that there are thousands of trained men, carpenters, electricians, engineers, and various other trades who cannot obtain work at the only thing they know how to do because of the fact that they are near the 50 mark and younger men flood in from other parts of the country, and the young men get the jobs. * * * I do not ask big wages or boom conditions—just a chance to work at my trade for a decent living for my family."

This letter speaks for many other letters—from the older workers who need jobs. And the country needs these older workers.

I recommend that every citizen lend his utmost cooperation to the efforts now

underway to break down prejudices against the older worker. The Nation needs his services during this defense emergency. He, in turn, wants a job and badly needs a job. The time has arrived when we can develop a happy and permanent solution to this vexing problem. With your sympathetic cooperation the older worker can look forward to the dignity, security, and contentment that comes with gainful employment.

The War Situation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

ADDRESS BY FORMER PRESIDENT HOOVER

Mr. WILEY. Mr. President, I ask unanimous consent that the address delivered over the radio last evening by Herbert Hoover, former President of the United States, be printed in the Appendix of the RECORD. The speech is a remarkable statement by a remarkable man, and every American should read it. Absolutely free of all personalities, it calls upon all Americans to do some logical and unbiased thinking.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FELLOW AMERICANS:

For the last 6 months I have remained aside from the controversy on whether we should join in this war. I have been waiting to see the progress of our preparedness. I have wanted to see the situation abroad develop more fully. I had believed that the President was earnestly endeavoring to keep his promise to the American people of October 23:

"We will not participate in foreign wars and will not send our Army, Navy, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

In the past 10 days we have had many speeches and much propaganda, the meaning of which is to drive the American people into this war. One who has been honored by his country as a member of America's War Council in the last World War and as its Commander in Chief in subsequent troubled years must learn something of the principles of national defense and our setting in the world.

It is, therefore, my duty to speak out of my experience. I hope that, by sober discussion of the facts, I may contribute something of thought in this most fateful decision. I am not speaking as the representative of any party, of any group and committee, or any association. And despite the depth of emotion that I feel, I hope I may speak without passion and with respect for the views of my many troubled fellow citizens.

I do not need to express again my abhorence of the whole totalitarian movement or its dangers to the world. That there be no misunderstanding, let me state at the outset that I support provision of the maximum tools of war to Britain; that I am convinced we can give this maximum during her next critical months only if we keep out of this war; that putting our Navy into action is joining this war; that the whole European war situation is in transformation; that America is as yet unprepared even for adequate defense; that our people are not united. To go in now is neither wise nor for the interest of either Britain or ourselves.

As I have listened to these recent speeches it has constantly recurred to my mind that the problem before Mr. Roosevelt is far more difficult and complex than many of these speakers imagined. In the anxiety and emotion of the moment many do not recognize the stern facts.

THE NEW PROPOSALS TO JOIN THE WAR

It is now proposed that we should put the American Navy into action. That is a straightforward, understandable proposal which boldly makes clear the meaning of words like convoys or patrols. That is joining in this war, once and for all. From here the steps would be automatic. Our Navy must attack German submarines, ships, and planes if it is to be of any use. To make it effective then we must expand naval and air bases abroad. We must equip these bases with expeditionary forces. And that is war for long years to come.

WE ARE NOT YET AT WAR

There are those who say we are already in this war. That is not true. We are in a position of risk. But war has not been declared between ourselves and the Axis. Diplomatic representatives are still maintained on both sides. Our treaties are still in force. There is no killing of men between us. If this war were ended tomorrow it would not be necessary for us to make a new peace with Germany.

I am not arguing the spirit of our relations with Germany. I am only discussing the situation which exists. But it is a certainty that we shall be at war the moment our Navy is put into action. We are in the war when we send our boys either by air or by sea or on expeditionary forces with an intent to shoot at the Germans. Let us not coddle ourselves by thinking otherwise.

It would be more consistent with American honesty and American courage for us to face the straight issue of a declaration of war by the Congress, as the Constitution provides, than to creep into an undeclared war. It is due our people that the Congress should vote on the real question which underlies all this, "Shall we declare war on Germany or Italy or Japan?" In a national debate on that issue the whole of the facts could be placed before the American people and the people could reflect their views to the Congress. That question once openly determined by the only open process democracy knows, then our people would accept that decision—whatever it might be. The full facts and the truth is the way to achieve national unity.

FACING THE FACTS

We must face some hard facts. And there is among them the transformation of the military and political situation abroad. There is our unpreparedness. There is the practical aid that Britain now requires and requires at once. There is the lack of unity of our people.

This is no time for wishful thinking. Upon our decision depends the fate of our Nation. It is the time, of all times, for a sober and frank appraisal of new facts and new situations.

THE TRANSFORMATION OF THE WAR

The first hard fact is the transformation of the character of this war. No one can deny the grim possibility that Hitler may take Suez, Iraq, North Africa, and the Mediterranean. This would not, however, cut the vital life line of Britain. It might even release the British Fleet to protect their Atlantic lanes. In any event, Hitler can occupy all of continental Europe.

And from all this area he will get ample food supplies and vital raw materials for the German people. True, he is blockaded by the British Fleet, but the blockade cannot starve the German people or cut off their vital raw material supplies. It is only the people in the occupied democracies who will starve. Having been disarmed to their very carving knives, they cannot revolt.

A second phase of this transformation is that substantial army fighting seems likely to go into the background for many years. The British Armies cannot invade Hitler's Europe. Nor do I believe with all the 6,000,000 men that Hitler commands and his superior air force that he can now cross the Channel to England. To invade Hitler's Europe would require us to prepare 5,000,000 men in addition to the British Army. This time to invade Germany we would need to land them quickly and that might take 40,000,000 tons of ships to carry our Army over the Atlantic. And they might not be able to land even then. It would take 10 years to build those ships. And Hitler could not start toward the United States without equal preparation.

Therefore, with this transformation it does not appear that this war can be brought to a conclusion by armies or navies for years and years to come.

The undetermined weapon against Hitler is air power. And the character of air war is also being transformed. It is rapidly emerging to be long-range bombing with fighter planes to defend against the bombers. Accurate action in destruction of industrial and military objectives by daylight is no longer possible because of the efficiency of fighter planes on both sides. Manufacture of more and more planes will thus continue on both sides. But so far there is no effective answer to night bombing. It serves mostly to destroy large objectives, the cities and harbors, reducing them to rubble and killing civilians. And in this destruction Hitler has to fly only one-third the distance that the British have to fly to reach his point of attack.

And there is a transformation in the German blockade of England. The long-range bomber is developing as a primary weapon in the attack upon harbors and upon ships. Submarines are today partly scouts, sending word to the air forces. Naval protection of Britain's sea lanes is now subsidiary to air protection.

This moving transformation of the relation of army power, sea power, and air power presents new situations which are not yet clear. They involve many new considerations. They plainly indicate that America would be joined in a long, long war without a clear method of conclusion. And they emphasize England's immediate need, which I will discuss later on.

THE SITUATION IN THE PACIFIC

The second hard fact we must frankly face is that in the last war Japan was our ally and we had no need to defend the Pacific. But Japan is now openly allied to the Axis. She only awaits a favorable moment to realize her ambitions in Asia. That opportunity comes to her if we go to war in the Atlantic. Even if she does not open war upon us, her action and attitudes will be so potentially dangerous to us that we must instantly divert our energies to strengthen our defenses in the Pacific.

OUR UNPREPAREDNESS

The third of these hard facts that we have to face is our unpreparedness. We have been slow to organize for defense, as is always the case in democracies.

We are not prepared to go to war. Our industry will not be tuned up for another 8 or 10 months to produce enough of the tools of

war to equip our own defense and at the same time supply the needs of Britain. We do not have 300,000 men who are sufficiently equipped with planes, tanks and guns to meet 300,000 Germans, to say nothing of victory over 5,000,000 of them. We will not even have 1,500,000 men so equipped for probably another 12 months. We have no substantial air force of the type now being used in this war. It is true we have a magnificent Navy, but even that is not yet big enough for the job which it may have to undertake if we join in this war.

And preparedness for war consists not alone of men and tools and munitions. It also embraces the spirit of a people. This war is a total war. That means every energy of a people must be mobilized. We must have a united people to make successful total war. We are united in resolution to defend the Western Hemisphere from military aggression. We are united in building whatever of a war machine is necessary for this purpose. We are united in our condemnation of aggressor nations. We are united in wanting to help England defend her independence.

But beyond this we are a divided people. Do I need to prove this disunity? There is an obvious large majority of people who oppose the sending to foreign wars of our boys either on our Navy or on convoys or airplanes or expeditionary forces where they may have to shoot or be shot at. These oppositions are strongest in our youth, and it is youth who must die. There is no unwillingness in them to die to defend our hemisphere.

And to have a united people the Government must be united with the will of the people. A divided people cannot act effectively in the supreme issue of total war. That failure in unity was part of the disaster of France. The first necessity is to follow an objective upon which our people will agree.

History will assess the condemnation or the praise for the policies and the methods which have brought us to these dangers. That is not the question now. The question is what to do from here on.

AIDS TO BRITAIN

Our every sympathy, our interest is to assist the heroic defense of England. We have pledged ourselves to give Britain the aid of our factories and our farms.

Her most critical period is right now. It is during the next few months. What is the urgent need of England as expressed by her leaders time and again? Plainly she needs bomber planes to guard her sea lanes. She needs bomber planes and fighter planes to offset the attacks upon her cities and her harbors. She needs tanks, munitions, and food. She needs merchant ships to replace her losses. She needs minor naval warships to guard her sea lanes.

We are today giving her only a part of the scant production of our industries and retaining the other part for our own preparedness.

If we join this war we must join in earnest. We shall lose it any other way. If we join we must at once increase our Army to 3,000,000 or 5,000,000 men. We would have to use a larger part of our immediate manufactures to supply our own Army. We would have to use a larger part of our air production to defend our own coast cities. We would have at once to increase our protections for the Pacific Coast and our island possessions. We have to use a larger part of our production of fighter and bomber planes for them. We would have to hold merchant ships in reserve to carry troops to protect them. We are not building enough merchant ships now to meet British needs. We would have to use our light naval craft to convoy and protect our own sea lanes, especially in the Pacific.

In net, if we join this war we must use a larger portion of our present scant production for our own equipment and defense. We would have to do this at once. And that means if we join in ths war we must give Britain less tools of war during her most critical period.

If we stay out of this war we can take more risks in parting with our tools of war.

The British have said time and time again that if we give them the tools, they have the manpower to repel invasion; they have the men to man the warships, the merchant ships, and the airplanes.

THE COURSE WE SHOULD PURSUE

Today we are confronted with not one problem but many. What is the constructive American course amid these problems? Is it not clear that we will give less tools to Britain if we join in the war? The solution is not for us to go to war, but to give her every tool that will really aid her, regardless of our own preparedness. There are risks in this course, but it is the least perilous road we can now take. This solution will not please extremists on either side. Common sense and stark truth rarely do But I am convinced that here lies the road to national unity that is so essential to America at this time.

SOME OTHER QUESTIONS

We must also think other things through. And there are some other very disagreeable questions that must be answered before we take the plunge to war. We cannot refuse to face the facts of the situation when the fate of the Nation is at stake.

We wish to aid Britain, but we must face the fact that if she cannot maintain the independence of the British Isles with the tools and policies I have mentioned, it cannot be maintained by our joining in the war. If we are in the war and should Britain fail, we would be left to carry the war alone. And that war against Nazi-controlled Europe will have to be fought at a distance of 3,000 miles and for years and years.

In that event are we going to blockade Europe? If so, are we going to starve the 40,000,000 people in Great Britain? And how will we bring such a war to a conclusion?

WE MUST NOT BE SWEPT OFF OUR FEET

What the course of the American people may be in this conflagration of the world cannot rightly be determined now. We cannot appraise all of the factors. At the present we cannot judge the effect of the transformation going on in this war. But there are some things we can state with assurance.

Right now we need calm thinking. We need reason. We need tolerance. We need to approach these problems with deliberation. Until this picture is more clear it is folly to gamble with the fate of a Nation. Strong men do not need to rush. We must not be swept off our feet by the profound depth of our emotions. By no hasty or emotional act must we jeopardize the aid to Britain and the future of America.

THE PRICE OF WAR

Finally we must not forget the price we shall have to pay if we join in this war.

It means the sacrifice of our most precious lives and the hopes of millions of mothers and wives. It means the sacrifice also of our own liberty to a dictatorship of our own, inevitable in total war.

If we go into war we must pass through post-war bankruptcy. The savings of the people will be lost. The endowments of our universities, colleges, hospitals will be destroyed. And when the day of transformation of war into peace comes the Government will not be able to support the unemployed and the farmers. In this gulf all major industry must be operated by the Government. When we go to the peace table hate will again, as before, sit at that table endeavoring to destroy the hope of any real peace among men. Liberty will not recover on this continent for a generation.

But if, despite all this price, we are compelled to act with our military power, let us be thoroughly prepared. Let us make our determination within the frame of our Constitution by the decision of Congress. And when that decision is made there will be no disunity in America.

The Germans know all about our slow preparedness. They need have no momentary satisfaction in our unpreparedness. That will be forthcoming. The potential might of this Nation is the strongest thing in this whole world. If necessary, we can raise and we can eventually equip an army of as many millions of men as we need. We can make more ingenious tools of war and we can operate them better than any nation in the world. That strength is always here in America. The defense of the United States is not dependent upon any other nation. America cannot be defeated.

What Next for America in Government?

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. GEORGE D. AIKEN, OF VERMONT, AT NATIONAL TOWN HALL CONFERENCE, NEW YORK CITY

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. GEORGE D. AIKEN, Senator from Vermont, before the National Town Hall Conference in New York City on the evening of May 9, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If I pretended to know for a certainty what is next for America in government, I could very properly be accused of being either very foolish or very conceited.

As a matter of fact, in referring to the future the two words "if" and "unless" must be resorted to very frequently. Americans, however, are noted for their love of taking chances, and so, I am going to take a chance in mentioning some things which I believe lie ahead of us in government.

I readily admit that any prophecies which I dare make are undoubtedly colored by my hopes and my fears. I am not going to talk to you about the war tonight as such, because the problems of America and the changes that are taking place in America are not predicated on war itself and do not depend upon America's entry into or staying out of war.

Our most acute problems have already existed for many years. Defense programs, foreign entanglements, even conflict itself can neither deny nor solve them. A great national emergency can obscure them for a time, can postpone the judgment day as regards them, but in so doing it also intensifies and magnifies them.

For example, scant consideration is being given today to the fact that this year the United States Government, in spite of the tremendous increase in revenue, will fall short of paying current expenses of government, exclusive of defense costs, by over $2,000,000,000. When we fail by this amount to meet the ordinary costs of government when national income is high, we must recognize that we have a problem of such major importance as to rank even with foreign involvement.

This is only one of the matters which lie ahead for the American Government to cope with. The old saying is that we can be sure of only death and taxes. Indications are that we may soon expect enormously increased amounts of both.

With the increased speed of travel, with easier methods of communication, with modern improvements in transportation facilities, we are called upon constantly to make readjustments in our economic life and our living habits.

States are as near together today as counties were a generation ago. Nations are as close to one another as States were at that time. This situation has necessitated constant changes in government as well as economic matters.

It has become more and more impracticable and impossible for States to regulate and control vital factors of our economic system. A general trend toward centralization of government has been the inevitable result.

Rivers do not recognize State lines. Most communication and transportation systems have become wholly national rather than matters of partial State concern. A great problem has arisen through failure or inability of the States themselves to control and regulate the practices of great corporations whose business extends into all the States of the Union as well as all over the world.

Consequently each year sees more and more of these things coming very properly and necessarily under Federal rather than State jurisdiction. Therein is raised the question as to how far we can go without effacing local self-government. How can we meet the needs of changing times and still preserve the feeling of authority and initiative which patriotic citizens should possess?

Can this modern tempo of business and government be controlled and well ordered by the practices which have served us well for over a century and a half? These questions present to America a constant challenge.

On the 8th of March, when the Congress of the United States passed the lend-lease bill granting to the President the right to make secret alliances with any nation on earth without informing the Congress, when it gave to him almost unlimited control over all the resources and to a large measure all human activity in our country, we took a long step away from our wanted government of law toward an unwanted government of men.

Many thought this was an unwise thing to do that in the long run would defeat the purpose for which such legislation was intended. I felt and I still feel that the effect of this so-called emergency legislation will be as far reaching on the domestic life of America as it will be upon the geography of the nations.

Under the guise of a national emergency and under the enormous power granted by the lend-lease bill we may expect the administration of the United States to complete phases of its program which never would be sanctioned by a complacent populace in a time of serenity.

We are not going to return to the old days and the old ways of private industry. Unfortunately we are going to have a new group of profiteers and war millionaires in spite of all efforts to control profiteering by taxation. But before this emergency is over, we will, through our Government, through our emergency dictatorship, if you please, take from the hands of the few the control of great natural resources which properly belong to all the people of the Nation.

If you wish me to talk still plainer, I will say that before Mr. Roosevelt is deprived of his national-emergency powers, the American Government will have become one of modified, how modified I cannot say, state socialism. It will, however, still be called Democracy. I don't know whether that is his intention or not because he does not confide in me. But, unless I am guessing wrong, the Federal Government will own or control far more closely than heretofore the electric power, the transportation systems and the financial institutions of America. Greater Federal control will be exercised over industry through Federal licensing or chartering of great corporations.

Greater Federal control will be exercised over our rivers and other waters and over the land of the Nation, the oil, the minerals, the coal, and the forests. If this program goes too far, it would not be modified State socialism, but Totalitarianism with a capital T.

As an example as to how the President will use the national-defense emergency to attain his purposes, I call your attention to the St. Lawrence waterway. Some 20 years ago utility interests proposed to spend $1,300,000,000 in the development of this waterway, giving all navigation facilities to the United States and Canada in return for the right to develop electric energy.

The offer of these interests was not accepted, and since that time utilities in general have conducted a systematic and effective sabotage campaign to prove that the St. Lawrence development is impracticable, although they would pay most any price to secure the right of private development for themselves. Every President since Woodrow Wilson has advocated this development and yet the utility interests have been powerful enough to prevent it.

Now, the picture is this. Competent lawyers believe that the President has authority to go ahead with this development under the lease-lend bill, though he may have to go to Congress for the money.

America has become involved in the affairs of all nations to an extent which may result in our needing every resource which we possess to be used in a national defense or war program that may last over many, many years.

It is pot safe to assume that this war will be over in 2 years' time. Therefore, we must plan for a long time struggle.

If you will look at a map showing the location of the great national-defense plants recently authorized, you will see that the Great Lakes Basin is thickly studded with them. There is barely enough electric power to supply those already in operation there. More will be needed. The St. Lawrence can furnish it. If you will assume—and it need not be a wide assumption—that the shipyards of the Great Lakes will be called upon to construct ships that cannot reach the sea unless the seaway is constructed, then you will realize that public opinion now in opposition will change to a demand that this St. Lawrence development be put through with all speed.

I give you this as an illustration. It is only one. In fact, the President has laid before Congress a 6-year plan for natural-resources developments. Other countries have had 5-year plans, 10-year plans. Ours, just to be different, is a 6-year plan.

The desire of the President for Federal ownership or control of all natural resources, which has been so apparent during his years of office, seems to be well on the way toward fulfillment as a result of the emergency powers granted him last March under the lend-lease bill.

He will retain these emergency powers so long as he remains in office, for by July 1, 1943, when his statutory authority expires, these emergency powers will have become so geared into our political machinery that to remove them might mean the wrecking of the machine.

What else may we next expect in government?

We are not making many real friends among the nations of the earth. We are making only lukewarm allies of some nations that might be our friends. The time is not far distant when we are going to need friends. We are attempting to secure the friendship of many nations by the liberal use of cash. Or we are doing our part to starve the small nations of Europe who have been accustomed to look upon America as their friend and benefactor. We will be fortunate if we emerge from this entanglement with a single do-or-die friend among the nations of the globe.

As a result of this unfortunate international situation, America will from necessity become a great military nation—perhaps the greatest the world has ever known.

We are not going to send our boys back home at the end of a year's training. We are not going to stop until we have created an army of several million men, which will never be demobilized while the present administration is in power.

Of course, we face danger. But, being a military nation, feared and hated by the rest of the world, is not an enviable position. It does not bode well for either international or internal welfare.

It carries with it a possibility of fascism. While I don't believe you or I will see America a Fascist nation, yet fascism is undoubtedly a greater menace to our Government than is communism or any other "ism."

Big business today has become a bedfellow of big government. Big business, big government, big armies, working together have made more than one European nation what it is today. But if big business has any idea that it is going to take over the controls of the present administration in America, it will be disillusioned.

I think that big business and the present administration are enjoying a truce and not a treaty.

Let us watch out that America does not become a military Nation in the sense that other countries have become military nations. Neither military nor political might must ever again be used to suppress the rights of those groups that have made our Nation great.

Labor in America is highly organized, and all efforts being made to deprive labor of this fundamental right must be defeated. Friendly relations between labor and employer cannot be enforced through legislation. Agriculture is less well organized but nevertheless is a powerful factor. Organization of groups does not fit in with totalitarian control of government, even during emergencies.

Agriculture has incurred the hostility of some of the highest officials of Government. An order has just been issued that no employee of the Department of Agriculture shall engage in any activity tending to recruit the membership of a farm organization or hold office in any farm organization unless that group is federally authorized. Even the Grange, which is largely a social farm order, comes under this ban.

Farm organizations must not be strong if Government is to control agriculture.

A well-organized program to restrict or destroy the benefits of labor organization seems to be well under way.

The innumerable injustices committed in the application of the wage-and-hour law and other legislation of recent years give enemies of labor a potent weapon with

which to work. Labor itself is not entirely blameless.

Is the picture I am painting too pessimistic? Am I drawing too close a parallel between what is happening in America and what has happened to other nations?

I don't want to leave you thinking that I believe America is on the road to total ruin. We face no danger that cannot be overcome. What those who believe in totalitarian government attempt and what they permanently accomplish are different matters.

We have dark days ahead. Some of the darkest pages of American history are being written today. But on the farms of America, in the homes of America, in the industries of America are over one hundred million people who love their country, who love liberty, who are retaining their reason during these hysterical times.

Two years from now these people will send their representatives to Congress. Four years from now they will be in control of their government. The New Deal, as now constituted, will have had its little day. It will have been the instrument for performing much good, which good will live on, properly applied, after its evils have been erased.

It's no time now to lose courage, to consider disaster as wholly inevitable. We will start in again on the long uphill task of building internal security for America. We will again concentrate on producing wealth—not destroying it. We will strive to establish national integrity in the world and make friends once more among the nations.

Involvement of United States in European War

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

EDITORIAL BY JOHN C. VIVIAN

Mr. JOHNSON of Colorado. Mr. President, on May 8 the Denver Post published an editorial on the question of going to war, with which I am in complete accord. This editorial was written by John C. Vivian, Lieutenant Governor of Colorado and a popular World War veteran, who was acting as guest editorial writer at the time. I want my colleagues and the readers of the CONGRESSIONAL RECORD to have the benefit of Mr. Vivian's timely observations, and therefore ask unanimous consent to have this powerful, straight-from-the-shoulder editorial printed in full in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Denver Post of May 8, 1941]

(By John C. Vivian, Lieutenant Governor of Colorado)

The United States has been slowly but surely drifting toward the war in Europe ever since the belligerent nations first began biting at each other's heels. Every move we have made has been nearer, not farther away, from the conflict. The passage of the lease-lend bill made our entry into the conflict certain.

The irony of it all is that in the last 8 years, during which time the Nazis have been in the ascendancy and Hitler has been carefully planning the fruits he is now reaping, we have sat idly by and done nothing about it. We have had ambassadors, ministers, personal representatives, diplomats plenipotentiary, and extraordinary messing around in European affairs persistently during all that time. Why, nobody seems to know. Either they brought us no news of Mr. Hitler's preparations or else the Government, knowing what he was doing all the while, has failed to pass the information along to the people. If they didn't know what Germany was doing, in perfecting the most efficient war machine the world has ever known, they should have. If they knew and failed to take the American people into their confidence, someone is criminally liable.

Nobody will disagree that we should have been preparing to defend our own borders and shores during all that time. The American Legion and other veteran organizations have consistently called the attention of the Government to the fact that we should have been at this defense thing long ago. And yet we complacently allowed Hitler to build his death machine before our own eyes while the wool was apparently completely pulled over our orbs.

All of the experts agree, it seems, that we are in no condition to go to war with anybody at the present time. They likewise are a unit, it is believed, in the theory that we cannot adequately defend ourselves if we are called upon to do so. The writer is one of that vast school of thought who does not believe there is a ghost of a show for Hitler or the combined Axis Powers ever to invade America or transport enough planes or ships or what not to cause even the slightest embarrassment. If Germany cannot negotiate the English Channel of 22 miles, how in the name of common sense can she bridge 3,000 miles of unconquered ocean? It just doesn't make sense.

In Washington everyone is busy preparing for our entry into a war which is not ours and which is not of our making. It isn't a question of whether we shall enter the European imbroglio but when we shall enter it. Every preparation is for active participation. We will be convoying the merchandise we are sending abroad just as soon as Congress can get around to authorizing it, if that needs be. Every ship on the east coast that can be commandeered will be brought into use, if the experts in that city are to be believed, and at the earliest possible moment.

The boys who were told they were being sent to training camps for a year and for the purpose of maintaining our own defense are likely to find they are in for a much longer period and that they are being trained for actual eventualities, not in America, but elsewhere. Nobody knows where. It is generally believed down east that these youths are on their way to active service.

It's lamentable that we haven't taken the advice of the men of the World War—who know what war is and who have tried to tell the Congress and the administration for 8 long years what we should have been doing and how we have muffed the ball until the eleventh hour. These boys have been painting an exact picture throughout the years since the World War. They have memorialized Congress annually regarding the state of the Nation and have called a spade a spade. Had their advice been heeded, we would not find ourselves in the woeful state of unpreparedness we now seem to be in.

The greatest danger to America today is the lethargy, indifference, and apathy of our people. Mr. John Q. Public is prone to sit around luncheon and dinner tables in conferences and committee rooms, discuss the ills of the Nation and then do nothing about it. Most of us seem to be willing to let George do it.

The time has come when each citizen must take upon himself some of the obligations of citizenship which he has long neglected. We must not allow ourselves to fall into the same situations in which France and England found themselves in the years prior to the present war. In these countries the people allowed their emotions to get the better of their judgment. They had the same unwillingness to face realities.

Minorities have long played too prominent a part in guiding the destinies of our country. The only way to prevent actual conflict on the part of America in the present European fiasco, is for the American people to rise in their might and tell the President and Congress that we must not enter the war. They must insist the administration keep its promises that we shall not enter the war. They must pledge themselves individually and collectively to assist the President in keeping the promises he has made in this regard over a period of months.

There must be a unity of opinion and action on the part of our citizens if we are to mind our own business and keep the freedom and liberty which we have long enjoyed but which we have too long taken for granted. There should be an uprising of the masses to the end that America shall stay American; that the Constitution shall be preserved, that the ideals of our forefathers shall be maintained and strengthened and that we shall have none of the policies which have brought all Europe to misery, penury, and suffering.

It will mean sacrifices, in fact, many of them. We had just as well make up our minds to that if we are to remain inviolate. We must give up some of our pleasures; we must take more time from our business in order that we may begin paying a little more attention to the biggest business in the country, namely, the Government of the United States of America, an obligation which we have far too long neglected. The time has come when the people—all of the people—must take over their Government and run it themselves. Unless we do this and unless we do it now, this country will fall into less capable hands. Failing to do this, we are likely to wake up and find the things we have always considered near, dear, and precious, have vanished whence we do not know.

The President is quoted as saying:

"Convoys mean shooting and shooting means war."

If we are at war, or on the brink of war, why not tell us so? Undeclared war is the advantage of the Hitler type. From a defense standpoint, undeclared war is a disadvantage, like inviting the Trojan horse within our peaceful boundaries.

God grant that the President may keep his promises to America and the parents of the boys now in training camps to stay out of the war. It is the duty and obligation of our people to assist him in keeping them. They are a most solemn pledge and must not be violated or allowed to become a scrap of paper.

In contrast to the President's various utterances is the news from the Secretary of War that his Department has ordered four and one-half million medical tags for identifying men killed and wounded in action and that the President has requested the American Red Cross to prepare 4,000,000 surgical dressings. These are scarcely necessary for maneuvers or training purposes.

When Secretary Stimson was asked by Senator HIRAM JOHNSON how many coffins have been ordered the Secretary did not answer.

One trouble with us is we have been talking peace and preparing for war.

It is of paramount importance, in view of Secretary Stimson's announcement that he favors convoys, that the American people be fully informed of the situation as official Washington sees it. Not a small fraction of our citizenry have any idea how close we are to war, the condition of our armaments, the strength of the Army, Navy, and Marine

Corps, the campaign planned by the administration, or the details as to what our entry into the war means and to what extent we are likely to be involved. They have insufficient facts to form an opinion as to our ability to conduct a war.

Too much information regarding the situation has been kept away from the public. The administration should lay its cards on the table and take the people into its confidence. If this is done, Congress will soon know how the people feel about convoys and war. And it will find 90 percent of our population is against our entry into the European conflagration. If we are blindly led into it, a minority will be responsible.

What should we do? We should cease talking about crises and emergencies and face the fact that we must devote our energies to production and building defense material so badly needed by ourselves.

We should help England if she helps herself and proves to us she is interested in our future, too, by turning over to us her islands and securities to hold until the end of the war, so that if she should fall we may then move in our own right, not as aggressors but as defenders of our own property and our own liberty.

We should stop creating hysteria; we should quit this talk of fear; we should stop enacting legislation to delegated officials, boards, bureaus, and commissions which harass our people by virtually making laws solely in the dominion of Congress. We should build America strong by the voluntary energies of freemen. We should tell the people the truth about the foreign situation. We should redeclare our faith in America, valiant America, standing unafraid. We should tell the world we constitute the liberty and freedom-loving people of the earth and that the blood of America consists of the blood of all the nations of the earth. Furthermore, the blood of America belongs to America and to her defense to the last drop, for the defense and safety of her people, the peace of her people, and for the ideals for which she stands.

What should we do? We should be for America first, always.

Testimonial Dinner to Charles A. Hamilton

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

ADDRESS BY HARRY N. PRICE

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Harry N. Price at a testimonial dinner given Charles A. Hamilton on the occasion of his 85th birthday, on March 13, 1941. For a number of years Mr. Hamilton was treasurer of the National Press Club and he is the dean of the Capitol Press Gallery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to recite for just a moment a short story of the career of the young man who is honor guest tonight on the occasion of the anniversary of his eighty-fifth youthful birthday. Charles A. Hamilton was born in London, England, in 1856.

I wonder how many of you know about Charley's migration to America? Well, it so so happened that sometime prior to Charley's coming, his parents had sailed for this country and had taken up their residence in Buffalo, N. Y. Charley was left behind to finish his schooling. He stayed in London for some time, but he yearned to join his parents in America, and so in 1869 Charley, then a lad of 13, took passage on the good ship *Fortuna*, a German brig whose crew numbered 12. Charley was the only passenger, and it took 43 days to make the trip from London. The ship docked at Brooklyn, and as he climbed ashore the captain said, "Charley, me boy, you act like you are one of the crew."

A week after that Charley joined his parents in Buffalo. He didn't want to go to school any more, and so his dad got him a job as an office boy for a lawyer at the weekly wage of $2. He stayed 1 week.

Charley must have had a yen for the newspaper business, for his next job was selling newspapers on the streets of Buffalo. When he was 22, Charley had established himself as editor and publisher of a weekly newspaper in East Aurora, N. Y., and he made it pay. Time went on, and the publisher of the Buffalo Commercial suggested to Charley that he ought to go on to Washington and become a correspondent. The publisher offered to pay him space rates, and Charley accepted. Incidentally, that publisher refused to pay 39 cents collect toll on one of Charley's stories because the subject of the story was a Democrat.

Charley landed in Washington in 1882, and soon thereafter he had made connection with a number of out-of-town newspapers as their Washington correspondent. One of the first papers he represented was the Minneapolis Tribune. Finally he became the correspondent of the Buffalo Times, owned by Norman E. Mack, until his death an influential Democratic leader. He continued to represent the Buffalo Times in Washington up to the time Mr. Mack sold the paper, and many was the scoop he pulled for Norman Mack.

I do not need to tell you that Charley is the oldest living member of the Press Galleries in the Capitol. His original card of admission is dated January 1883, after he had been here since July 1882.

Now, I have just a few words more. Charley not only stands as a newspaperman who has had a notable career as a correspondent. I think, perhaps, Charley Hamilton has helped to make more good newspapermen than any school of journalism ever did. He smoothed over the hard places in many an aspiring young man's career in the newspaper business, and I think it safe to say that he did more voluntary substitute work for some lazy correspondents who inhabited newspaper row up until the time that famous rendezvous disappeared with the erection of this National Press Building than any correspondent in Washington.

One of the fondest memories Charley Hamilton has is that his son, Maj. George Hamilton, of the United States marines, was in command of the marine regiment that was engaged in the last battle of the World War on the day the armistice was signed.

Not long ago I asked Charley what he thought of the Presidents he has known—and he has known all of them since Chester A. Arthur. He told me that Arthur was the best dressed, the finest sport, and the most popular President in his time—that is, up until the present; and Charley declares now that, in his opinion, Mr. Roosevelt is the most popular President ever to occupy the White House—certainly the most popular with newspapermen.

Today we can look back with pride and gratification on the grand deeds he has done, and we can only bow in humble tribute.

Beryllium

REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. REECE of Tennessee. Mr. Speaker, in 1938, when the Temporary National Economic Committee was organized, Europe was at peace; yet war clouds were gathering and tension was increasing. Defiance was being hurled without restraint, and even we were joining in the melee in a manner which usually leads toward eventual conflict. Nations were inventorying their military strength, some with undue optimism, but most, like ourselves, were extremely sluggish when it came to intelligent military preparation, competent to cope with the new dangers lurking at every turn.

It was at that time I learned of a new development in metal, a development that was revolutionary in its nature and held forth promise of great military and economic possibilities. Already men of courage in this country had spent 10 years of time and millions in money to carry on the struggle to make this metal serve a useful purpose in industry—and they had reached that goal.

Germany had gone through a similar struggle with equally successful results. This appeared particularly interesting because we found a working agreement existed between the leading concerns in both countries. This working agreement included an exchange of patent rights, control of territory, and so forth, making it seem worth while to determine how our country fares under such arrangements and what steps might be advisable if corrective measures were found necessary.

Our committee desired to study the problems such a new development met, particularly in this country as compared with an identical one in Germany.

We desired to learn, if possible, why Germany was able to make such rapid progress in building up its industrial institutions, and this seemed to be a lead in that direction.

We desired to compare their respective facilities for securing adequate financial support.

We wanted to learn about the protection each received from normal competition.

In addition, we desired to compare the protection Germany gave new industries with the protection given in this country—that is, protection from the ruthless competition a revolutionary industry frequently meets from those who fear that new enterprises may harm the old ones previously established.

The difference in methods used by this country and Germany in encouraging the development of wartime materials also seemed important.

After the preliminary studies were made, we felt an examination of this particular metal—called beryllium—would afford the best opportunity for the important comparisons we wished to make. We, therefore, held such an investigation of the beryllium industry in the spring of 1939 and the first comprehensive Government record was established as a result of these proceedings.

Long before the hearing I had learned many facts regarding this rather remarkable metal, facts in addition to the century-old struggle to produce it at all in commercial quantities and the added difficulty and experimentation necessary to get useful results out of it.

I found in Germany that a $10,000,000 plant housed the beryllium industry. In America it was necessary to use rented buildings.

In Germany other kindred activities were carried on under the same roof, activities needed in the processing and refining of the metal for commercial uses. In America no such equipment existed, except small units imported from Germany, because it was apparently too new and revolutionary to be taken up in the United States, where conditions were subnormal and the opportunity to raise new capital was difficult.

I found the German company producing beryllium was not the main company but a subsidiary of another giant industry that outranked even our largest American concerns. In America no such parent support had been available.

In Germany I found loans from the Reich came quickly and abundantly, particularly if the plant expansion served military purposes. In America such funds were only obtainable with delay and difficulty, if at all.

In Germany I found that close cooperation existed between the military experts and the plant management. I found these military officials were not only interested in the production in the plants but also were very conspicuous in the designing rooms and research laboratories. These laboratories were built in Germany on a scale unknown in our country, a scale which would make our great Bureau of Standards look insignificant by comparison. In the United States military representatives had never seen a pound of this material made and had shown little or no interest in research connected with this subject.

Facts such as these impressed me to such a point that I took the matter up with important Army officials, thinking I might have gathered something which would be worthwhile to bring to their attention. My first surprise was to find that their information about the subject of beryllium barely exceeded one page of typewritten data; second, that great reliance and dependence was being placed on the French and British to supply this country with detailed data on German activities having any bearing on war preparations; and, third, that anything new, regardless of its military possibilities, was not of interest to the Army until it had developed in industrial or commercial channels to where it could be had in competition and in large quantities, and until its value had been thoroughly tested and approved.

It was evident that such a development would never be made by the military authorities; consequently, it could only come by the progressiveness of private industry. This may be a fault partly chargeable to members of Congress, because we have held the purse strings rather tightly when it came to appropriations for experimental purposes.

By the time representatives of the beryllium industry had been called in for the hearing I had learned enough so that I felt no surprise when I found three representatives of the Germany Embassy were present. On the other hand, I was a bit disappointed, but not at all surprised, when I failed to see a single representative of our Army or Navy in the committee room.

Part 5 of these hearings carries the beryllium testimony, and it has been in greater demand than any book reporting the hearings because some very interesting facts were disclosed—facts of deep significance, having to do with both the problems of business and of war.

I want to mention some of the high points brought out by the committee.

First. Germany was further advanced in the industry and was doing things on a bigger scale than America.

Second. Japan was actively in the market for beryllium-bearing ore and beryllium oxide—in quantities overshadowing American production.

Third. Italy was buying and storing large quantities of beryllium-producing ore.

Fourth. Germany had used a special beryllium alloy bushing—which had never failed—in quantities that indicated she had at that time at least 14,000 superairplanes, modern, and ready for actual combat.

Fifth. Germany was exporting beryllium-copper and beryllium-nickel products, in finished form and of superior quality, to foreign countries; while we were making no finished products of comparable nature for either domestic or foreign trade.

Sixth. South American countries, Russia, and numerous other sources were supplying beryl ore in commercial quantities—beryl is the ore from which beryllium is produced—and, while found in half the States of our Union, no dependable supplies were being secured from this country.

Seventh. It was shown that 2 percent of beryllium alloyed with 98 percent of copper produced a metal with a tensile strength of 185,000 pounds—against a strength of 33,000 pounds for copper alone. Two percent beryllium alloyed with 98 percent of nickel produced a tensile strength of 300,000 pounds—against 155,000 for nickel alone.

Eighth. Both beryllium-nickel and beryllium-copper were in demand because of their outstanding strength, because they are noncorrosive, and because of their phenomenal resistance when used in springs, and because of their great accuracy in operation.

Ninth. It showed that a spring of phosphor bronze had a fatigue life of 400,000 vibrations—the best steel, 3,000,000—whereas beryllium-copper and beryllium-nickel will go to several billion before breaking.

Tenth. It showed these springs were so sensitive that for delicate aircraft and other instruments they rendered service no other known metal would perform.

Those disclosures should have been a forewarning of the mechanical superiority which crushed France and most of the other European nations.

Another interesting fact brought out was the protection given in Germany to a new industry struggling to establish itself in the trade. Over there a patent when granted is complete protection—over here it is not much more than an invitation to litigation.

In Germany ruthless efforts, by those indirectly affected, to destroy a new industry were completely banned and, very probably, if such an industry had military significance, those guilty of such interference might have found themselves before a firing squad.

In the case of the United States, our committee disclosed that some of the copper interests were actively conniving to destroy the beryllium industry, regardless of its merit, and it appeared that they had a possible ally in a firm actually producing the metal—at least, this firm appeared to be not out of sympathy with such proceedings.

One might ask why a producer of copper would not welcome a new metal containing in its composition 98 percent of pure copper. The answer is very simple—because of the strength and other qualities of beryllium-copper a lesser quantity of the metal is needed, which would reduce the poundage to a point less than is at present consumed. Another more potent answer is the fact that a substantial percentage of all copper goes into the production of phosphor bronze and the testimony secured from the phosphor-bronze industry showed that beryllium-copper would take the place of phosphor bronze in many uses and, while it would not in their opinion entirely supplant phosphor bronze, the metal had many additional uses to which it could be put.

It was further shown that about 2 pounds of beryllium with 98 pounds of copper would produce a product better than phosphor bronze. Phosphor bronze of the same weight would contain about 10 pounds of tin; hence, there was no evidence that the tin industry was friendly to beryllium's rapid development.

While the present cost per pound of beryllium-copper as against phosphor bronze is a little over twice as much, the quantity used is less, and, taking the history of all metals and considering the somewhat primitive equipment found in this country, it was not hard to visualize the time when the beryllium alloy might be a price as well as a quality competitor of phosphor bronze.

In the case of beryllium-nickel—considering its tremendous tensile strength—it is not hard to see that similar services might easily be performed with a lesser

quantity of nickel—so that, even before our war problems became so imminent, economic reasons were indicating that a new revolutionary development of this kind should be hastened by Government aid, so that its benefits would more rapidly accrue to the Nation at large.

In Germany, great attention was given to the effect of beryllium in other metals, such as steel, and we found experimentation going on, with some encouraging features, which might mean that in time we would have better materials than aluminum for aircraft construction.

Another interesting fact was brought out in discussing the qualities of these alloys. They have low surface tension; hence they can be cast with great smoothness and accuracy—almost the accuracy of machine-tooled parts. This showed great possibilities theoretically. However, it was not shown—and probably not known—whether such processes were in use in German industry.

At about that time, however, the Army and Navy were informed—by one of the beryllium companies—in writing, that they were welcome to investigate every detail of the industry; that all facts and information gained to date would be disclosed to them; and that even limited experimental work should be done at the expense of the company, or the material would be supplied if the Government itself desired to carry out tests for military purposes. The Army was shown dozens of uses to which the metal could be put and by the use of which many mechanical devices would be improved, but, while the war clouds were getting blacker every day, no move or evidence of interest was shown by those military gentlemen whom we hold responsible for defending our democracy.

But let us turn for a moment from international problems—even from governmental problems—and review the beryllium industry and its record from the beginning of 1939 to date. For the sake of brevity, I will confine this review to the Beryllium Corporation and its president, Mr. Andrew Gahagan, because from that source our committee obtained its most valuable information, and his knowledge of the subject, as compared to the testimony of others we heard, seemed preeminent.

After being told that a high degree of commercial development was prerequisite to Government military interest, the Beryllium Corporation desisted in any attempt to further interest it in its product. Instead, it confined its activities to commercial applications of beryllium alloys.

As a result its business increased rapidly and is now tenfold greater than in the year 1938.

The demand is greater than present production.

Yet items of greater weight have not been solicited because of lack of facilities for producing same.

When improved types of aircraft required resistance greater than other metals would supply, beryllium was ready to meet the need.

When aviation instruments required greater accuracy in some of their parts, beryllium made this accuracy possible.

When dependability meant safety or security in mechanical equipment, beryllium was there to insure that result.

But hardly a thing that went on aroused a flicker of interest in the eyes of Washington.

Last fall, however, as our preparedness program began to reach its more intensive stage, something stirred the lethargy, just a little, to be sure, but someone learned that indifference and discouragement had not snuffed the light out of this industry, and, as a result the National Research Council was requested to get up a committee to study this metal and report about it to the high authorities in official Washington.

Last fall such a committee was named; last month the report was made available to Members of Congress. I note the report is dated March 17, but it was about the 1st of April before it was available to Members of Congress. I might add that such a date, April Fool's Day, was very appropriate for the arrival of this report.

When I glanced at the personnel of the committee, which is composed of seven members and the chairman, I felt that it was ably headed by Dr. C. W. Mathewson, professor of metallurgy at Yale. On the committee, however, I note four members who to my mind were in an awkward position in such a group. I am referring to those gentlemen connected with firms who might be affected by the nature of this report. I am particularly referring, however, to Mr. John R. Freeman, Jr., technical manager of American Brass Co., and to Dr. C. Baldwin Sawyer, president of Brush Laboratories. If these gentlemen did not possess a voting control of the committee they were at least a dominating factor, as they, more than others, had a knowledge of the business, however limited that knowledge might have been. In my opinion, if they were selected by someone uninformed about the situation, it would have been a gracious and proper act on their part had they declined to serve in such capacity.

Dr. Sawyer, of the Brush Laboratories, is also the president of the Brush Beryllium Co. Dr. Sawyer, as president of the latter company, was a witness before the Temporary National Economic Committee. At that hearing three witnesses connected with the American Brass Co. also appeared.

First, I will explain the background of their appearance:

It developed that the Beryllium Corporation, after learning that small quantities of beryllium—not over 2½ percent—added to copper produced an alloy of phenomenal strength and hardness, presented this information to the American Brass Co., who were astonished and highly pleased with the results the Beryllium Corporation had obtained. They became interested in the production of fabricated materials such as sheets, rods, wire, and tubing, and bought beryllium content ingots from the Beryllium Corporation to supply the requirements for their finished products.

The American Brass Co., so they say, became so keen about beryllium and its possibilities that they concluded they needed a second source of supply for the metal, and the Brush Beryllium Co. was either created for, or at least became, their principal source of supply.

As their knowledge increased they discovered that beryllium alloys could, and to a large extent would, supplant phosphor bronze, which is an important part of their business. There ensued on the part of the American Brass Co. and the Brush Beryllium Co. a series of price jerkings, and so forth, which indicated that somewhere in the group there was a strong inclination to kill the industry entirely or control it for their special benefit.

The fact that I have a keen recollection of this hearing explains my surprise when I read the personnel of the committee named to give this country, in its emergency, a broad, comprehensive, and intelligent report on the beryllium situation as of the present date.

Now, as a further background to the recent report I am discussing, I want to take you back to our hearing in 1939, where it was shown that the beryllium industry faced to barriers. Strange as it may seem, the American barrier became more serious than the German.

After Mr. Gahagen's company had pioneered this business and had invested large sums of money, he found that numerous American patents had been taken out by a German concern which were apparently registered to block development of the beryllium industry in this country. As you know, this is not the only instance of its kind. After going to Germany and working skillfully, a transfer of these patent rights was secured which thus effectively removed all foreign threats.

As just mentioned, the American barrier had to do with the maneuverings of the American Brass Co., who apparently set out to rule or ruin the industry. Without going into detail, I might say it only made the Beryllium Corporation a complete unit so that now it is the outstanding producer of the metal itself, as well as the alloys in finished form. Through the courage and ability of Andrew Gahagan this industry was again saved for the people of the United States.

I urge you, with these few words of warning, to read this report. It is headed "Report of the committee on beryllium of the National Research Council." I wish for a moment to address myself to its substance and I hope you will bear in mind what I have said about it, when you may have occasion to read it.

We are passing through strenuous days where time is short to do those things vital to our future existence. These are times when quick decisions are necessary and, above all, when right decisions are paramount. Andrew Gahagan, president of the Beryllium Corporation, testified before the Temporary National Economic Committee that, after spending tens of thousands of dollars unsuccessfully trying to make an alloy of high beryllium content with aluminum and other metals, he gave it up entirely, as far back as 1933. It was reported that the Aluminum Co. of America spent substantial sums and got no better results.

Now, manifestly, any committee organized at this late date in our war preparations must have been created to get the latest, up-to-the-minute reports on the subject in question. The Committee on Beryllium, in its report, devoted half the

words to the exhuming of that almost forgotten subject, a beryllium-aluminum alloy, and then to its careful reburial.

Whether or not these courageous people who have brought another element into successful use are ever able to make it alloy in any amounts with any light metal is still in the experimental stage.

When it came to the heavier beryllium alloys, that is, beryllium in alloy with copper, steel, or nickel—where the real uses are manifest, and where every month there is substantial consumption for war purposes—no such voluminous attention was given the subject.

It would have been refreshing had this report shown something about the present volume, how it is being used and, incidentally, why large quantities of it are bought each month. All of this, with many more details, could have been obtained in a matter of days instead of months by visiting the principal source of production in this country and by an examination of its orders and official records. As a matter of fact, while this committee was pondering, the backlog of orders for beryllium alloys increased more than 100 percent, a fact which I pass on to the committee.

The committee report accredits beryllium with some importance in the military and economic world, but the tenor of it would, certainly, chill the enthusiasm of anyone with a single dollar in the business and would tend to paralyze those who have invested a few millions. Fortunately, the latter have more reliable data from which they chart their course.

This report, however, does show, in a somewhat vague manner, the possibility that enough beryl ore might be obtained, if sought for aggressively in the world market, to produce over the next 12 months about $35,000,000 in value of serviceable beryllium alloys. It even admits that a little advance in ore prices might increase the world supply and suggests that, out of the 30 or more known substances with beryllium content, new methods of reduction might add to the supply, but in the main I gather this committee wants the Government to think the industry rather unimportant.

One striking point is brought out, indirectly, which refers to the almost negligible quantity of beryl ore produced in the United States. It is a well-known fact that this ore exists in about half the States of the Union—the committee admits its existence in several States—and it reports that substantial tonnage can be had from countries like the Argentine and Brazil, but that nothing has been done by individuals or government tending to create an interest in producing this ore in the United States.

It does not indicate, however, that such practical facts as the question of ore have been gone into with very great thoroughness, all of which convinces me more and more that the Congress should ascertain the facts and foster legislation which will coordinate and compel, if necessary, the rapid development of this industry. Such a procedure would clear up controversial points and insure that those who harness additional elements will not meet and have to overcome the discouragement, obstructions, and handicaps which have beset the beryllium industry.

I am convinced that, to protect ourselves against a shortage of tin, we should see that proper measures are taken to procure for this country the maximum quantity of beryl ore, thus encouraging a new American enterprise, and lessen to whatever degree is feasible the stock piles of tin ore which are being accumulated.

Before closing, I wish to pay a compliment to the President and to his loyal friend and intimate associate, Hon. Leon Henderson.

Mr. Henderson served as the secretary and later as a member of the Temporary National Economic Committee before he became a member of the Advisory Commission to the Council of National Defense. I became an admirer of Mr. Henderson because of the fair and able way in which he performed his duties and, particularly, because of the attention he gave to the subject of beryllium in unraveling both its patent and its practical problems. I am glad his interest has continued, and I infer he has acquainted Mr. Roosevelt with the subject as I learn that the President has recently issued an Executive order putting beryl ore on the strategic and critical list. This makes me feel more certain than ever that it is important in this emergency and I believe, when history is written, the President will review with pride the part he played in the development of the beryllium industry.

Methods of Payment for Lands of the United States

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Thursday, May 8), 1941

MEMORANDUM FROM HON. GUY CORDON, ROSEBURG, OREG.

Mr. McNARY. Mr. President, on March 24, 1941, I introduced Senate bill 1201, to provide for a uniform method of payment to the several States on account of certain lands of the United States.

A day or so ago I received from Hon. Guy Cordon, of Roseburg, Oreg., a memorandum vividly explaining the worthy objectives of the bill. I ask unanimous consent that the memorandum be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Memorandum on S. 1201

The uneven distribution of federally owned, tax-exempt real estate, held for purposes other than purely governmental operations—more in the nature of private proprietorship or for national values rather than for strictly local benefit—has resulted in excessively high tax rates in the localities where such lands are situated; this fact is now generally recognized, both within and without the governmental structure.

Accelerated acquisition of additional acreage by the Federal Government, running into the millions of acres—an acceleration which will unquestionably increase rather than decrease—has brought the resulting tax problems to the attention of a constantly increasing number of citizen taxpayers throughout the Nation.

Congress has long recognized the justice of some sort of contribution in lieu of taxes to local government for these vast Federal holdings, and has provided contributions from time to time, ranging from a percentage of annual receipts, as with regard to national forests, to submission to local taxation, as is done with lands acquired by the Federal lending agencies. The percentage of receipts method of measuring the payments is inadequate and unsatisfactory, for three main reasons, namely: (1) the amount of receipts is wholly dependent upon the wisdom of the agency heads who administer the particular lands, and varies with the judgment of the individual, to a great degree; (2) the payments are restricted to use for specific purposes by the local governmental agencies, thus preventing a general application to level tax reduction; (3) the payments cannot be anticipated in either time or amount so as to be budgeted by local tax-levying bodies and be reflected in a commensurate tax reduction.

S. 1201 provides a uniform method of determining the amount of these Federal contributions, and extends the policy to include Indian reservations, which are not of great extent, nationally viewed, but which present a critical problem to local government where they are situated. The enactment of this bill will result in establishing a level and equal payment on account of these lands, wherever situated, will permit of local tax reduction, and place the counties which are now suffering from the narrow tax base caused by the exemption of these lands from taxation upon the same basis as those counties where all the lands are privately owned and taxable. This result is accomplished by eliminating all percentage of receipts payments and using instead as a basis of contribution a percentage of the fair value of the lands involved.

S. 1201 applies to the following classes of lands owned by the United States: (1) national forests; (2) wildlife refuges; (3) lands administered under the terms of title III of the Bankhead-Jones Farm Tenant Act; (4) Indian reservations and trust lands; (5) Taylor Act grazing lands; (6) lands sold under contract with title reserved; and (7) lands leased for value.

Under present law, contributions are paid upon lands in classes 1, 2, 3, and 5, all upon the basis of receipts, but with varying rates of percentage. Indian reservations and trust lands pay nothing, except such as are within Taylor grazing districts. Lands within classes 6 and 7 are of small area; they are unquestionably included because they are of the type for which contributions should be made.

Section 1 of the bill provides for the annual payment to the several States of a sum equal to 2 percent of the fair value of the lands of the classes named within such State. This payment is uniform in amount in every State having Federal lands of the classes affected, varied only by the fluctuating values of the lands; this makes for equity as between the States and between the various classes of lands. Section 2 limits the amount of annual payments to any county, to be apportioned by the State, to 40 percent of

the total annual expenditures of such county, thus discouraging any tendency to extravagance. Any balance not apportioned by the State is available for general school purposes.

Section 3 provides for the fixing of values on the lands and for the payments to the several States, for apportionment to the counties.

Section 4 authorizes the several departmental heads having administrative jurisdiction of the lands to fix the fair value of such lands, thus leaving with the Government control of the basis of payment; it may be assumed that the values fixed will reflect the values used by the several counties for local tax purposes.

Section 5 excludes from the operation of the bill all lands which are now subject to local taxation, such as those acquired by Federal land banks, etc., all of which remain locally taxable.

Section 6 simply authorizes the appropriation of funds to carry out the purposes of the bill.

Section 7, as amended, repeals the several provisions of law under which the various kinds of contributions are authorized at this time, placing all the lands upon the new uniform basis created by this bill.

Approximately 365,000,000 acres of public lands are affected by this bill—a very small fraction of the area of the continental United States, and an even smaller fraction of the value of the real property of the Nation. Small though the acreage and its value be as compared to the Nation as a whole, it very frequently represents a large part of the acreage and a large part of the real-property value of the counties where it is located; in some sections, notably in the South and West, a preponderantly large percentage of some counties is so held. For instance, in Arizona over 95 percent of one county is Federally owned and of the classes enumerated. So, while of little importance when viewed nationally, the problem is one of real consequence to local government in the areas where the public lands are situated. And it will become of importance to other localities as the Federal acquisition program develops; over 335 counties are now affected by the acquisition of national-forest land alone, without mentioning the many more that have the problem of reserved forest lands. The number swells to huge proportions when we add the various wildlife refuges, the Taylor grazing lands, and the Indian lands.

The translation of this bill into law will, it is submitted, be an act of simple justice to these far-flung communities which have long fought to keep local government going on a fraction of the potential tax base; it will place them upon the same footing as those more fortunate counties which have enjoyed the whole of their tax resources, in private ownership, and which have prospered above their neighbors for that reason.

Dangerous Concentration of Wealth

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. RANKIN of Mississippi. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a short statement from the Washington Evening Star of Thursday, May 8, 1941, showing the enormous salaries drawn by leaders in, or heads of, various monopolies.

You will note that one man, Louis B. Mayer, as manager and director of a motion-picture concern, drew a salary last year of $697,048—or more than nine times the salary of the President of the United States. Another one drew $478,144, another $456,415—more than six times President Roosevelt's salary.

This will come as a distinct shock to the American people at this time, when their boys are being drafted into the Army at $21 a month.

I am sorry this list does not show all the enormous salaries and emoluments drawn by the leaders in the vast utility holding companies with which the American people are now burdened.

Is this democracy? Is this government of, by, and for the people, when a few favored individuals rake down salaries that no human being on earth could legitimately earn?

While we are trying to save democracy, to save our republican form of government, to save our way of life, and preserve those institutions that have made our country great, we ought to begin here, by raising the income and inheritance taxes in the higher brackets, breaking up these vast fortunes as well as these abnormal incomes, and turning them back through the channels of our economic life.

Already less than 5 percent of our people own more than 90 percent of our wealth. At this rate they will soon own it all. That is what breeds communism.

The matter referred to follows:

[From the Washington Evening Star of May 8, 1941]

MAYER KEEPS TOP RANKING WITH SALARY OF $697,048—GRACE IS SECOND WITH $478,144; G. W. HILL, THIRD, GETS $456,415

Louis B. Mayer kept top ranking as America's highest paid executive last year, receiving $697,048 as managing director of production for Loew's, Inc., motion-picture company.

This was brought out today in a study of dozens of annual reports filed by large corporations with the Securities and Exchange Commission.

Mr. Mayer's remuneration from Loew's was $8,677 more than in the previous year. He had no close competition for first place. The second highest on the pay list was Eugene G. Grace, with $478,144 as president of Bethlehem Steel Corporation. George W. Hill received $456,415 as president of the American Tobacco Co., and appeared to be a safe third.

These figures do not represent America's largest incomes, however, since many persons who get only small salaries or no salaries at all have large incomes from investments. The Treasury reported recently that 41 persons paid taxes last year on 1939 incomes of $1,000,000 or more.

OTHER LOEW OFFICIALS INCLUDED

Behind the top three in salaries or other remuneration came Hunt Stromberg, who got $332,267 as supervisor of production for Loew's, and Nicholas M. Schenck, who was paid $318,881 as president.

The $200,000 bracket included:

W. C. Fields, $255,000, and Deanna (Edna Mae) Durbin, $209,833, both paid by Universal Pictures Co., Inc.; Paul M. Hahn and Vincent Riggio, $251,849 each, as vice presidents of American Tobacco Co.; Harry F. Sinclair, $200,930 as executive committee chairman of Consolidated Oil Corporation; Walter S. Gifford, $210,150 as president of American Telephone & Telegraph Co.

Ernest T. Weir, $245,400 as chairman, and George R. Fink, $245,300 as president of National Steel Corporation; Robert C. Stanley, $215,350 as president of International Nickel Co. of Canada, Ltd.; Harry W. Bracy, $206,402 as a branch manager for Kroger Grocery & Baking Co.

BING CROSBY GETS $150,000

Bing Crosby was paid $150,000 by Universal Pictures.

G. W. Vaughan was paid $148,671 as president of Curtiss-Wright Corporation, and B. S. Wright got $72,573 as vice president. National Distillers Products Corporation paid $165,000 to Seton Porter as president and $98,014 to Charles L. Jones as executive vice president.

Walter P. Paepke got $190,243 as president of Container Corporation of America. Bethlehem Steel Corporation listed $179,443 paid both to Quincy Bent and Robert Mackall as directors, and $139,506 paid both to Robert E. McMath and Frederick A. Shick as vice president and controller, respectively.

Other large remunerations disclosed by corporations included:

The Sperry Corporation, New York, $147,243 to Thomas A. Morgan as president, and $155,908 to Harry F. Vickers as president of two subsidiaries; the National Acme Co., Cleveland, $80,000 to F. H. Chapin as president; International Paper Co., New York, $97,674 to R. J. Cullen as president.

ONE HUNDRED AND TWENTY-THREE THOUSAND DOLLARS FOR PATRICK HURLEY

The American Rolling Mill Co., Middletown, Ohio, $106,213 to Charles R. Hook as president; $78,076 to Calvin Verity as general manager, and $74,900 to George M. Verity as chairman; the United Gas Improvement Co., Philadelphia, $90,000 to John E. Zimmerman as president; Consolidated Oil Corporation, New York, $101,040 to E. W. Sinclair as executive vice president; $123,000 to Patrick J. Hurley, of Washington, for legal services.

Crown Cork & Seal Co., Inc., New York, $100,200 to Charles E. McManus as president; American Telephone & Telegraph Co., $101,799 to C. P. Cooper as vice president; Thompson Products Co., Cleveland, $91,254 to F. C. Crawford as president; Borg-Warner Corporation, Chicago, $90,050 to C. S. Davis as president; Jewel Tea Co., Barrington, Ill., $95,352 to M. H. Karker as president; Goodyear Tire & Rubber Co., $100,000 to P. W. Litchfield as president; General Aniline & Film Corporation, New York, $90,550 to D. A. Schmitz as president.

EIGHTY THOUSAND DOLLARS FOR A. W. HAWKES

Cluett, Peabody & Co., Troy, N. Y., $95,000 to C. R. Palmer as president; Radio Corporation of America, $100,900 to David Sarnoff as president, and $60,940 to James G. Harbord as chairman; Congoleum-Nairn, Inc., Kearny, N. J., $80,000 to A. W. Hawkes as president. (Mr. Hawkes was elected president of the United States Chamber of Commerce last week.)

National Biscuit Co., $96,600 to R. E. Tomlinson as president; Libbey-Owens-Ford Glass Co., Toledo, $61,350 to John D. Biggers as president; Standard Oil Co. of Ohio, $90,000 to W. T. Holliday as president; Allied Chemical & Dye Corporation, $125,000 to H. F. Atherton as president; Checker Cab Manufacturing Co., Kalamazoo, Mich., $72,301 to Morris Markin as president.

National Dairy Products Corporation, New York, $150,540 to Thomas H. McInnerney as president; American Woolen Co., New York, $75,750 to Moses Pendleton as president; Tidewater Associated Oil Co., New York, $78,565 to William F. Humphrey as president; Lambert Co., New York, $80,000 to John L. Johnston as president; St. Joseph

Lead Co., New York, $74,000 to Clinton H. Crane as president.

Houdaille-Hershey Corporation, Detroit, $50,000 to Charles Getler, president; $43,666 to Don S. Devor, vice president; $43,216 to Ralph F. Peo, vice president; Air Reduction Co., New York, $112,520 to C. E. Adams as chairman; Burroughs Adding Machine Co., Detroit, $85,150 to both Standish Backus as president and A. J. Doughty as vice president; Cudahy Packing Co., Chicago, $51,022 to E. A. Cudahy, Jr., as president; Swift & Co., Chicago, $65,000 to John Holmes as president.

GENERAL MOTORS SALARIES

General Motors Corporation, $100,670 and 3,782 shares of common stock to Charles E. Wilson, acting president and executive vice president; $100,150 and 3,145 shares of stock to Charles F. Kettering as vice president; and $100,150 and 3,135 shares of stock to Donaldson Brown as vice president and vice chairman of the board.

Otis Elevator Co., New York, $83,803 to Jesse H. Van Alstyne as president; Cities Service Co., New York, $150,300 to W. Alton Jones as president; Consolidated Edison Co. of New York, Inc., $106,410 to F. L. Carlisle as chairman; Union Bag & Paper Corporation, New York, $86,829 to Alexander Calder as president; National Steel Corporation, Pittsburgh, $150,400 to Thomas E. Millsop as director.

Kennecott Copper Corporation, New York, $101,220 to E. T. Stannard as president and $101,530 to D. C. Jackling as director; Liggett & Myers Tobacco Co., $89,582 to J. W. Andrews as president and $79,582 each to Ben Carroll, W. D. Carmichael, B. F. Few, E. H. Thurston, and G. W. Whitaker, all vice presidents.

E. I. du Pont de Nemours & Co., $162,720 to W. S. Carpenter as president, $140,556 to A. B. Echols, as vice president, and $129,813 to J. W. McCoy, as vice president.

International Nickel Co. of Canada, Ltd., $105,300 to John F. Thompson as vice president; Curtis Publishing Co., Philadelphia, $71,036 to W. D. Fuller as president; Kroger Grocery & Baking Co., Cincinnati, $116,875 to Albert H. Morrill as president; Eagle-Picher Lead Co., Cincinnati, $74,000 to George W. Potter as vice president; Safeway Stores, Reno, Nev., $119,666 to L. A. Warren as president; International Harvester Co., $99,399 to Sydney G. McAllister as president; Armour & Co., Chicago, $74,377 to George A. Eastwood as president.

Laclede Steel Co., St. Louis, $35,550 to Thomas R. Akin as president and $24,000 to W. W. Scott, Jr., as vice president; Missouri Portland Cement Co., St. Louis, $23,625 to M. Moss Alexander as president and $14,175 each to C. S. McArdle and R. G. Uhlig as vice presidents; St. Louis Bank Building & Equipment Corporation, $16,080 to J. B. Gander as president; Key Co., East St. Louis, Ill., $15,300 to Robert L. Dutton as president, $15,070 to Elmer A. Key, a salesman, and $9,101 to John C. Wiley, a salesman.

Peonage in California

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE BY GEORGE MEANY

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Meany, which appears in the American Federationist for May 1941:

[From the American Federationist for May 1941]

PEONAGE IN CALIFORNIA

(By George Meany)

Years before the Civil War a talented woman named Harriet Beecher Stowe wrote a book called Uncle Tom's Cabin, which dramatized the evil institution of slavery and lodged a hatred of that inhuman system in the hearts of millions. Miss Stowe's book stirred the emotions of multitudes who had never read a political speech or heard a serious debate on any theme, and in the opinion of historians was one of the prime factors in bringing about the abolition in this country of the ownership of humans of black skin by other humans of white skin. But Harriet Beecher Stowe's novel was published in 1852, and it was not until 13 years later that the thirteenth amendment went into effect.

In our times things are supposed to move more rapidly, as, indeed, they frequently do. Yet in our times another moving book has been written, a great book in the same noble tradition as Uncle Tom's Cabin. This book, exposing a vicious condition which is merely a latter-day version of slavery, has been read by tens of thousands of persons, and its heartbreaking story is familiar to millions who saw it unreeled before them in motion-picture form. The work is The Grapes of Wrath, by John Steinbeck. When the book first came out, and later when the film was made, the Nation was shocked. There were those who could not believe that such appalling conditions could exist. But they did exist, as subsequent Government investigations attested.

But it is some time since The Grapes of Wrath first appeared, and because things are supposed to move with celerity nowadays, and because people are so prone to conclude that all that is necessary to make a national canker disappear is to play the hot light of publicity upon it for a day or a week or at most a month, most Americans believe the state of peonage among the impoverished workers in California's industrialized agriculture was largely eradicated a long time ago.

Most Americans think the feudal exploitations of wage earners on the lowest rung of the economic ladder—the whole shameful pattern of a few miserable pennies for backbreaking toil, of oppressive conditions of labor in the fields and groves, of adults and children huddled together in the most primitive of hovels, of the theft of the workers' earnings by compelling them to trade in unscrupulous company stores—cannot possibly still be operative.

After all, The Grapes of Wrath aroused indignation of mammoth proportions. After all, the President and the First Lady, Senators and Representatives, Governors and mayors, and hundreds of other outstanding personages denounced the conditions and called for their abolition. After all, the newspapers—not all of them, but hundreds nevertheless—and the magazines assailed the existence of peonage. Isn't public opinion a mighty force? Of course, it is. And public opinion was seemingly 99 percent against the misery imposed upon the thousands of agricultural workers employed by "farmers" owning thousands of acres of productive California soil.

All this being true, one can readily understand why millions of Americans are convinced that peonage in California is a thing of the past. Perhaps you, too, have come to the conclusion that the scenes in The Grapes of Wrath that pained your heart and moistened your eyes are no longer enacted in California. If so, don't you believe it. Don't you believe it for 1 minute. Because it just isn't so. It isn't so at all. The same oppression, the same abuses, the same harrowing conditions of work and life—they still exist. They exist—nay, they are rampant—in a part of sunny southern California officially designated as Ventura County.

Ventura County is a place where many millions of lemons are grown annually. Twenty-two thousand acres of Ventura County are devoted to the production of lemons. One family alone, that of a man named Charles Collins Teague, controls, through direct ownership and through holding companies, 3,500 lemon-growing acres. There are 500 little fellows in the county who also raise lemons, but these individual growers cut little ice.

The Teague family and a handful of other big growers, with 9,500 lemon-growing acres among them, hold the lemon industry of Ventura County in the hollows of their hands. It is they who decree that workers shall have $5.30 or $2.94 or even only a few coppers to show for 2 weeks' hard physical labor. And it is they who, with their banking connections and monopolistic growers' association agreements, force the small operator to stay in line.

The workers employed in the lemon industry of Ventura County are divided into two main classes—pickers and packers.

The pickers are the men and women, boys, and girls who toil from early morning at the task of removing the fruit from the trees. They are the workers who labor in the groves.

The packers, as the word indicates, are the workers who fill the boxes and crates with the fruit for shipment to market.

When the time comes for the picking of the lemons, it requires thousands of workers in Ventura County—which lies adjacent to and just northwest of sprawling and fabulous Los Angeles County—to do the huge job.

As already intimated, the conditions of these wage earners constitute a tale of unbelievable misery and exploitation. Now let us be specific. Now let us get away from the generalities of the indictment and down to the particulars.

The lemon pickers of Ventura County are theoretically paid 30 cents an hour—when they work. If a picker is called out on a job, he is likely to find that there is no work to be done that day. He wastes several hours and doesn't receive a dime. Or, even if he is luckier, he will often have to wait a goodly stretch of time before the dew evaporates. Until the dew disappears picking is forbidden, and sometimes the dew stays for a fairly lengthy period. While the picker is patiently waiting for the moment when the overseer will authorize him to start picking, no money is being chalked up to the picker's credit in the company's books.

In the antebellum South, there was slavery, and it was hateful. But the singing cotton pickers were not made up by imaginary novelists. The slaves' lot was not an enviable one, yet they seemed to be enjoying themselves—to some extent anyhow—as they sweated in the fields. The Ventura County lemon pickers, although their employers do not legally own their bodies, lead lives that have been likened to those under slavery. In at least one respect the slaves of the old South were better off.

The Ventura County lemon pickers do not sing as they work. In fact, they do not even speak to one another, except surreptitiously. Unlike the slaves, they do not especially feel like singing, because they don't see anything to sing about, and they couldn't sing if they wanted to, because the employers' rules are that workers must not utter a sound. Violation of the rules means instant dismissal.

With the beautiful sunshine of California warming them, with God's sweet air to breathe, why should these workers be so sad? The answer to that is quite simple.

In the first place, the workers' wages are so microscopic that, even if they received all

that they earned, they could hardly begin to maintain themselves and their families decently.

But, in addition to the meager pay, there are many reasons for the lemon pickers' discontent. They live with their families in tiny, squalid, primeval shacks which have no more conveniences, for the most part, than the log cabins of the pioneers and which are not half so solidly built as were those structures in the woods a century and more ago.

And these dilapidated shacks are company-owned. However, tumbledown and unhealthful and demoralizing these hovels may be, the companies insist upon their rent—and they collect it by deducting it from the worker's wages. In view of the nature of the housing provided, the rents are extortionate.

Another racket conducted by the lemon grove operators is the company store. By this time almost everyone understands how this pernicious system works. The worker is compelled to make his purchases in the company-owned store; that's a condition for retaining his job. The merchandise in the company store is shoddy and criminally overpriced. When a purchase is made the clerk enters a notation in his book. When pay day rolls around, the debts to the store are deducted.

After the rent and company store and other deductions are all made, it's a rare lemon picker who has more than a very few dollars to show for his work. There is the case of one man who was paid only 18 cents for 2 weeks' work. This lemon picker was employed by the benevolent Saticoy Lemon Association of Ventura County.

His earnings were $11.59, but after deductions he was left with only a dime, a nickel, and three pennies—fine pay indeed.

One day late in January some 1,500 of these twentieth century slaves decided to rebel, decided to try to get rid of their shackles, decided to attempt to improve their conditions. These fifteen-hundred-odd Ventura County lemon pickers went out on strike. It was a peaceful strike. No sit-down; no slow-down; no violence. The workers merely ceased picking lemons, donned picket signs, and commenced to parade, in orderly fashion, to advertise that a strike was in progress.

The strikers' ranks were swelled promptly; a week after the walk-out began the strikers numbered 4,500. February went by, March went by—and still the strike continued. April came and April went and now, today, in May, the pickets still march. Their ranks remain unbroken, their morale continues high.

How did the strike come about?

Sick of the oppressive and degrading conditions, the lemon pickers banded together, as other workers had done before. Then they called upon the American Federation of Labor to send someone into their pitiful world to help them.

The American Federation of Labor responded and soon the Agricultural and Citrus Workers' Union, Local 22342, was established. But the A. F. of L. organizers did not want a strike if it could possibly be avoided. They strove to carry out the Federation's policy of winning benefits for workers through peaceful negotiations, rather than through strike action. They had no desire to see thousands of impoverished workers on strike if there was any way of escaping it. But there was no way.

The lemon pickers wanted recognition of their union. They asked the right of collective bargaining. They sought a little better pay. That was all.

And the employers flatly refused even to discuss the situation with the workers' chosen representatives. The lemon magnates said that any of their workers who wanted to see them, as individuals, could do so—if they came in meekly, with their hats in their hands.

"But we won't talk to any unions," bellowed the tycoons. "We won't stand for any unions around here. Unionism in Ventura County is out."

Innumerable attempts were made by the union to find responsible parties to whom they could talk and with whom they could negotiate a settlement of the issues in dispute. But the growers were adamant in their refusal to meet with union spokesmen. The strike, rendered unavoidable by the growers' attitude, began.

The first persons speaking, or claiming to speak, for the growers were the president and secretary of the notorious antilabor California organization misleadingly named the Associated Farmers. These gentlemen quickly dropped out of the picture.

Then Charles Collins Teague, of the California Fruit Growers Exchange, called a meeting of the growers.

"We cannot and must not accede to the union's demands," said he. "It would be better for us to let the fruit now on the trees drop to the ground than to grant their demands."

So the strike went on and the lemons began to rot.

The employers tried to recruit strikebreakers. Obedient servants of the omnipotent operators, the authorities of Ventura Junior College sanctioned a call for students to work as scabs. But this contemptible act failed to accomplish what it was intended to accomplish.

Then E. T. FitzGerald and L. N. Sisley, conciliators of the United States Department of Labor, proposed arbitration of the dispute by a committee of three—one appointed by the Secretary of Labor, one by the Secretary of Agriculture and one by Governor Olson of California. The plan called for the strikers to return to their jobs while arbitration went on. The union accepted the plan, but the secretary of the growers' committee tartly informed the representatives of the Federal Government that there was nothing whatever to discuss, nothing whatever to arbitrate.

Although this seemed to make the attitude of the employers quite clear, the union soon afterward addressed a letter to the secretary of the growers' committee. In this letter the union pointed out that it had been designated by the pickers as their collective bargaining representative and expressed a willingness to call off the strike if only the employers would recognize the principle of collective bargaining. The union did not then ask—nor has it ever asked—for a closed shop. But it did courteously suggest that a committee could be established to consider the industry's ability to pay its workers better.

No reply to this letter was ever received. And the strike continued.

The growers brought in some starving Okies to act as strikebreakers. Lacking skill at the work, the Okies caused extensive damage. And soon even the Okies showed their strong dissatisfaction with the pitiful wages paid them.

Striving to break the strikers' spirit, the employers first had the lights and gas shut off in the workers' miserable little homes. This action was particularly callous because there were young children in almost every striker's family.

Next the labor-hating employers proceeded to have the striking workers evicted from their shacks. The hardships resulting from eviction were counted upon to break the strike at last. But again the employers were disappointed.

Now in its fourth month, the strike is going stronger than ever. The western headquarters of the American Federation of Labor and the American Labor Citizen, official A. F. of L. newspaper published in San Francisco, have done a magnificent job of mustering the support of California labor and the public at large for the strikers' cause. Organizer Meyer L. Lewis, in charge of the western headquarters, has seen to it that the help given the strikers was material as well as moral.

Because the employers' high-handed refusal to sit down around the table with the workers' chosen representatives mocks the sentiments of the American people and because their anachronistic policy has cost each of them a fortune, organized labor is confident that victory will soon be had by the striking lemon pickers—a victory well merited.

But even if they stood entirely alone—which happily they do not—these workers could not be defeated. That was the conclusion I reached after visiting Ventura County. I saw conditions that were barbarous and shocking. But what impressed me most was the indomitable courage of these workers in the face of extreme adversity, their grim determination to carry their strike to a successful termination despite all hardships.

Men and women like these spirited lemon workers deserve to win because they are so clearly in the right. And, in my opinion, win they will—and soon.

The outspoken support of Americans everywhere who believe in simple justice can do much to speed the lemon pickers' day of victory.

How the Timken Roller Bearing Co. Solved the Week-end Black-out

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE FROM THE CANTON (OHIO) REPOSITORY

Mr. THOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following news item published in the Canton Repository, of Canton, Ohio, my home city, setting forth the accomplishment of the Timken Roller Bearing Co., the largest industry in the city, in setting up a 168-hour workweek, and thus keeping its equipment working on defense material every hour of the week.

Announcement from Washington that Sidney Hillman, associate director of the Office of Production Management, is perfecting a plan for a 4-shift, 160-hour production week for vital defense industries, focused attention today on a schedule that has been in operation since August 1939 at the plant of the Timken Roller Bearing Co.

Terming it the "week-end black-out schedule," officials of the Timken Co. 21 months ago inaugurated a system enabling the company to keep its equipment running not 160 but 168 hours (24 hours a day, 7 days a week).

The Timken schedule betters the one proposed by Mr. Hillman by 8 hours a week. This was accomplished by an ingenious scheduling arrangement of shifts and crews whereby each crew works 5 extra 8-hour shifts

over each period of 20 weeks for which overtime is paid. It is through these 5 extra shifts that the Timken schedule reaches the additional 8 hours each week.

The arrangement of shifts has been so carefully worked out that every man works 5 days in a row and then is off at least 48 hours, after which he changes shifts. Over each period of 20 weeks each man has 5 Sundays off. The shift schedule runs 20 weeks and then repeats without change.

The Hillman plan, announced from Washington by United Press, would leave machines in vital defense industries idle only 8 hours a week, from 7 a. m. to 3 p. m. Sundays. This time, Hillman said, could be utilized for repairs and other essential maintenance work.

In his efforts to get general approval of the plan, Mr. Hillman has asked the cooperation of the American Federation of Labor and the Congress of Industrial Organizations.

Msgr. John A. Ryan, a Great Man and a Great American

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE FROM THE TIDINGS BY REV. R. A. McGOWAN

Mr. VOORHIS of California. Mr. Speaker, I consider it an honor to have printed with my remarks the following article by Father R. A. McGowan regarding one of the most truly important books of recent years, the Autobiography of Msgr. John A. Ryan:

THE YARDSTICK—MSGR. JOHN A. RYAN'S AUTOBIOGRAPHY CALLED SOCIAL DOCTRINE IN ACTION

(By Rev. R. A. McGowan)

Monsignor Ryan's autobiography, issued by Harper's under the title, "Social Doctrine in Action," is a book that demanded to be written and that demands being read. The title describes the book accurately. It is the story of a body of the church's doctrine, a body of social doctrine, a body of doctrine on the relations of people in their social and economic life. And it is the story of that doctrine in action—in the varied and powerful activities of the daring pioneer of Catholic social teaching in the United States living during a fateful generation.

Fortunately the book turns out to be still more than an account of an interesting life. It is a history of ideas, or something of their origins, and of the many applications of these ideas to current and shifting facts in a busy life. The book is well printed and there is an ample index to let you go back over it easily and pick out the many parts you want to read again and to consult as matters come up for your decision.

As you read, several impressions grow on you with mounting effect from chapter to chapter. Here is a first-class mind thoroughly at home in American life and having at instant command the eternal principles of human rights and human duties. Here is a warm-hearted man who hates injustices, both because it hurts people and because it offends the order of human relations which God decrees. And here is a humble, completely honest, and a tireless worker. The combination has turned out to be a providential blessing to Catholic life in the United States and to the United States as a whole. Students will be writing Ph. D. theses on this or that phase of his work, and scholars will continue to study him and quote him and annotate his works.

But you shouldn't read the book only to get acquainted with Dr. Ryan, if perhaps you are not yet numbered among his many friends. You should read it to learn how, or learn how better, to think and act in the tragic time in which we live, through knowing how he has thought and acted. The book is a short course in how Catholic social teaching can be your guide.

For example, 4 years ago last October Monsignor Ryan started the formal study which 35 years ago this month resulted in his epoch-making book advocating a living wage by law, and 3 years ago this year he wrote a Minnesota bill for a minimum wage for women. He has been pioneering all along and he is still pioneering. Many things which he has urged he has seen adopted. Many other things which he has wanted have not yet come true.

The story of the things accomplished, of the things to be improved upon and of the things yet to be achieved—for example, wide purchasing power to end unemployment, the democratic organization of the industries and professions to make economic life right, workers' management, profits and ownership sharing, and world organization for justice and peace—will help you think straight and act boldly now. It is really a great book.

The Power to Clip the Coin

REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. SMITH of Ohio. Mr. Speaker, I am opposed to continuing the power of the administration to clip the coin.

Mr. Morgenthau, Secretary of the Treasury, is asking that the political power to clip the coin and produce inflation be continued beyond the present expiration date in June. He wants to continue in operation this power to depreciate the value of our currency and Government bonds. This power now makes it possible to destroy the value of our currency and bonds in the amount of no less than eight or nine billion dollars.

It is remarkable that this request should be made at the present time, when the whole country is becoming apprehensive of the dangers of inflation, when the Federal Reserve authorities see these dangers and are asking for legislation to cope with them, and when the administration itself openly recognizes the dangers of inflation and is trying to head them off by instituting the most drastic and far-reaching measures ever adopted in this country, some of which are:

First. A tax bill to increase our annual taxes three and a half billion dollars, the largest increase in our history.

Second. A price control agency with totalitarian powers to be found only in dictator nations, and to avert inflation the administration has also inaugurated a program to raise a huge amount of money by selling bonds directly to the public.

At this very time, perhaps more than ever before, supreme confidence is needed in money and Government bonds. Yet here is the Secretary of the Treasury asking Congress to extend this most dangerous power to further clip the coin and destroy the future value of our currency and Government securities.

Mr. Morgenthau does not give one single valid reason why this power should be continued. He says it should be extended since it has not been used for 5 years, and since there is—

no present intent whatsoever to devalue the gold content of the dollar.

Certainly such arguments give no assurance whatever of the future value of Government securities, instead they cannot help but produce doubt as to the future intent to use this power.

This power to clip the coin has already been used and more than $600,000,000 of the clippings were used to pay off Government bonds.

The important question is not whether there is any "present intent," or for that matter any future intent to use it further. It is enough to ask, is there a future possibility that this power may be used, which, if it were, it would destroy the value of Government securities. Why do they want this power if they do not think they might possibly wish at some future time to use it?

In my opinion, not only is there a future possibility it might be used, but a strong likelihood it will be.

Consider the experience of some of the nations whose political authorities have had the power to clip their coin ("devaluation" is a term used to deceive the people and to hide from them what is really being done.

In Italy there is this power. At a single stroke, in one instance, her politicians clipped 3.5 billion off the lira (Italian money) and thereby destroyed that much value of currency and Government securities.

The Russian dictator has the power to clip the coin. In one instance he clipped more than $9,000,000,000 off the ruble (Russian money), and thereby destroyed that much value of the currency and Government securities.

The political authority of France had the power to clip the franc (French money). Three times it used this power. During the World War the franc was worth nearly 20 cents. By 1938 the French politicians had it clipped down to where it was worth less than 3 cents. That meant a bond which was worth about $20 during the World War was worth, in 1938, about $3. The peasants of France who had given freely of their savings for Government bonds lost by these clippings about $17 on every $20

worth of bonds they purchased. The United States Government authorities condoned and actually promoted the French clipping of the coin in 1938. See Washington Evening Star, May 5, 1938, and Washington Herald, May 5, 1938.

Is it right that the American middle and working classes should be subjected to even the possibility of such treatment?

It is noteworthy that Mr. Morgenthau in his request for the continuation of the power to clip the coin does not mention a single accomplishment that has been achieved by this power thus far. Of course not, because there has been none. It failed to achieve a single objective for which it was ostensibly created in the first place. Up to now it has had but one effect: it has operated powerfully to undermine and destroy confidence in the future value of the dollar. It is one of the main monetary debauchments that has destroyed long-term investments and the free-enterprise process. This power alone, to clip the coin, has been the cause of keeping millions unemployed. It is one of the main underlying causes that is speedily driving our Nation into totalitarianism.

There is not a single reason why this power should not be abolished. There are innumerable good reasons why it should be abolished.

It is most desirable and important that whatever amount of funds is to be raised by borrowing should be obtained by selling bonds directly to the public. The present scheme of the Treasury in raising funds by simply depositing Government securities in the banking system and then checking against its own paper to pay its bills is a vicious inflation-producing process.

It is the duty of Congress to protect the purchasers of these bonds by providing every possible safeguard against their future depreciation.

Taxes for Defense on Luxuries or Necessities

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. HARRIS of Arkansas. Mr. Speaker, what is a luxury? That is a question that must be answered by Congress in its search for things to tax for the $3,500,000,000 of new revenue annually needed for national defense.

Proceeding on the theory that wealth in the form of luxuries can be taxed with least injury to the public and with least damage to the Nation's economic balance, efforts are being made to weigh carefully the types of wealth that can be subjected to taxation with most facility.

There are three general types of basic wealth in the United States, namely, first, land and its improvements; second, productive wealth, as cattle, machinery, motor-trucks; and third, consumptive wealth, as metal stocks, food supplies, and personal effects.

Real-estate taxes, which are levies on land wealth, by tradition and custom belong chiefly to the local units of government. The Federal Government has never levied a tax on real estate despite the fact that it is one of the chief forms of wealth in the Nation. At one time the States derived their principal revenue by sharing in levies on real estate, but most of the States have relinquished their stake in such taxation, leaving real-estate levies to the local communities.

The luxury theory of taxation is not applied to real estate. A golf course, or an amusement park, is not taxed at a higher rate than are neighboring homes. Nor are luxury taxes ordinarily applied to productive wealth. A farmer with 1,000 head of cattle does not pay a higher rate than does a neighbor with only 50 head on the theory that a large wealth of cattle places the owner in the luxury class.

Luxury taxes are directed at the third type, consumptive wealth. For purposes of taxation, consumption goods generally are divided into two groups—First, necessities; and second luxuries. The staple articles of food, as bread, butter, and milk, are classified as necessities, and probably will not be taxed to any great extent by Congress. Some of the finer types of foods, however, were taxed as luxuries in the United States during the last war. Ordinarily, clothing is a necessity, but an expensive fur coat is regarded as a luxury. Some goods are considered as wholly luxuries, as perfumes, liquors, tobacco, and so forth.

Last year Congress increased the Federal tax on gasoline by 50 percent to provide funds for national defense. Despite the enormous increase, there are proposals for further increases in the rate. Such proposals are perhaps made because of lack of understanding of the true economic function of motor fuel.

Motor fuel definitely is not in the same category with tobacco, liquor, perfumes, expensive furs, and other luxuries. Approximately 25 percent of all gasoline consumed in the United States is used by trucks in transporting goods from producer to consumer. Of the motor fuel used in passenger cars, more than half is used in connection with earning a livelihood, according to the United States Public Roads Administration. Thus two-thirds of all the gasoline consumed in the United States is in connection with people earning a livelihood. The use of passenger cars in bringing men and jobs together has increased enormously by the national-defense program. Millions of persons engaged in national-defense work get to and from their jobs by motor vehicle.

Most of the gasoline consumed in the United States, therefore, cannot be considered even in the most remote sense as a product to be subject to luxury taxation. Motor fuel used in going to church, in transporting children to school, or giving the family a few hours' recreation, contributes much in elevating social values in the Nation. Inexpensive gasoline is the greatest leveler of class in all history. In the horse-and-buggy days only the well-to-do owned horses and buggies. Today, more than half of the car-owning families in the United States operate inexpensive used cars on incomes averaging less than $30 a week.

Clearly motor fuel is not a luxury in the United States. Only a relatively small part of the gasoline consumed in the United States is used for recreational purposes by families with incomes of more than $30 a week. If the wealth of such persons is to be taxed, such would be accomplished more effectively by other forms of taxation. Gasoline is not a suitable base for such taxation, for it definitely is not a luxury.

GASOLINE INDISPENSABLE TO NATIONAL DEFENSE

Finally any increase in the Federal gasoline tax would burden directly the workers who now are engaged actively in defense work. The workers employed in construction of Army barracks and other such facilities, for example, usually cannot live on the premises, so they must drive back and forth to their work. Then, too, because of the unusual volume of work involved, workers on such projects oftentimes have been attracted from other parts, and they depend upon their cars to go home for the week end to visit their wives and their families. Similar considerations apply to workers in munitions plants.

On such defense projects, it is shown in studies by the Automobile Manufacturers Association, between 70 percent and 80 percent of the workers depend upon their own automobiles or those of fellow workers in traveling to and from their work. The significance of the automobile as a means of transportation for such workers is emphasized even further when it is appreciated that two-thirds of all the communities in this country with a population of more than 2,500 possess no system of mass transportation whatever, that is, trolley or bus lines.

Gasoline consumed in motor trucking also is of vital importance to satisfactory completion of the defense program. This factor is especially significant in some States because more than 40 percent of the communities are not served by the railroads. Hence their residents must depend wholly upon truck transportation for their contact with the outside world. This point is most important in consideration of the possible effect of an increased Federal gasoline tax on the defense effort because of the desire to disperse plants engaged in defense contracts away from railroad terminals and other similar centers of communication for strategic military purposes.

We Should Take Heed

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

RESOLUTION OF BOARD OF SUPERVISORS, WAUPACA COUNTY, WIS.

Mr. MURRAY. Mr. Speaker, the Board of Supervisors of Waupaca County, Wis., have sent me their Resolution No. 8, in which they call attention to the fact that they, as a body, are opposed to measures leading this country into war and, furthermore, are opposed to excessive nondefense expenditures which are needlessly increasing our national debt.

If millions upon millions of dollars of the Federal funds appropriated annually were allocated back to the States and counties, they would be more efficiently administered and large sums of money could be saved by these county boards, which are the foundation of our Republic. If the will of the people is the law of the land, we should pay more attention to the voices of the people themselves.

The letter of transmittal and resolution is as follows:

WAUPACA COUNTY CLERK,
Waupaca, Wis., May 8, 1941.

Mr. REID F. MURRAY,
Room 423, House Office Building,
Washington, D. C.

DEAR SIR: Enclosed you will find a copy of Resolution No. 8 which was passed by the Waupaca County board on May 7, 1941.

Very truly yours,
L. J. STEIGER, *County Clerk.*

Resolution No. 8

To the Honorable County Board of Supervisors:

GENTLEMEN: The board of supervisors of the County of Waupaca, State of Wisconsin, representing a population of over 34,000 persons, prides itself in conducting the affairs of Waupaca County with a balanced budget and holding expenditures under income, and seriously objecting to expenditures which would force Waupaca County into debt.

We likewise know that a tremendous large majority of the citizens of Waupaca County, all a pesce-loving people who abhor war but nevertheless are loyal patriotic citizens who would fight to their last drop of blood for the defense of our beloved country.

We believe in the United States of America, with life, liberty, and the pursuit of happiness; and

Whereas our national administration apparently has little regard for excessive expenditures of increased national debts by spending billions upon billions of dollars, and by increasing the national debt of billions more, which, if continued, will surely mean disaster; and

Whereas acts now taking place at Washington, D. C., appear to be leading our country into a war which would take our young men to foreign lands to fight, bleed, and die: Now therefore be it

Resolved, That the board of supervisors of the county of Waupaca, State of Wisconsin, representing a population of 34,576 persons, hereby protests against the tremendous expenditure and exorbitant debt increases by the national administration and also protests against involvement in any war which will take our young men to a foreign land to fight, bleed, and die; and be it further

Resolved, That a copy of this resolution be sent to Congressman Reid F. Murray, Senator Robert M. La Follette, Jr., Senator Alexander Wiley, and the President of the United States, Franklin D. Roosevelt, so that our protests may be made known to them.

Dated at Waupaca, Wis., May 7, 1941.

Approved and passed at the regular session of the board on May 7, 1941.

STATE OF WISCONSIN,
County of Waupaca, ss:

I, L. J. Steiger, county clerk of Waupaca, certify that on the 7th day of May 1941, the above Resolution No. 8 was passed by the Waupaca County Board, and the above is a true and correct copy of the resolution.

L. J. STEIGER, *County Clerk.*

Strike—While the Iron Is Cold?

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

EDITORIAL FROM THE ROXBURY (N. Y.) TIMES

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Roxbury (N. Y.) Times of May 10, 1941:

[From the Roxbury (N. Y.) Times, May 10, 1941]

STRIKE—WHILE THE IRON IS COLD?

We have had a lot of talk about whether or not strikes were causing much havoc in the defense program, but until recently we haven't had very much in the way of calm and authoritative figures. Now, the National Association of Manufacturers has issued some statistics on defense and other strikes that should sweep a number of unsupported declarations into the discard.

The N. A. M. study shows that total number of man-days lost from strikes in the first 3 months of this year were more that three times as great as for the same period in 1940. In all, 3,022,918 man-days were lost in January, February, and March of this year; and of this total, 1,578,000 man-days were directly in defense industries.

The time lost in those industries would have been enough to equip about 1,402,480 American soldiers with the latest Garand rifles, or to provide more than 5,000,000,000 rounds of ammunition for those rifles. Seen in those terms—or in any others—the harm done can hardly be minimized.

The great danger lies in the attitude of some who continue to claim, in the face of the evidence, that the number or result of strikes in defense is really not very important. The figures knock that complacency galley-west.

Defense is either vital or it isn't. The American people think that it is, and will be paying billions in taxes to support their belief. In the light of that stand, there is an all-important need to work out solutions for any problems that arise without recourse to strikes that cripple our all-out effort for national defense.

Strikes in Defense Industries

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. LELAND M. FORD. Mr. Speaker, I rise again to talk on what I think is the greatest danger to our defense program, that is, the number of strikes that are now in process, or contemplated, that affect this program.

Listed in yesterday's Washington Post, and this morning's Post, there are strikes in 11 shipyards working on $500,000,000 worth of Navy contracts. This is an outlawed strike; an $11,000,000 order in the bag-loading plant at Pulaski, Va., affecting the $44,000,000 Hercules powder plant near Radford, Va.; $30,000,000 of work at the Boston Navy Yard; $9,000,000 in New Mexico. These are the amounts given. In addition to this, 6,000 workers were to strike in the Chrysler Corporation in Detroit; a strike is threatened in the Brotherhood of Railway and Steamship Clerks, freight handlers, express and station employees, and four midwestern railroads; 160,000 workers in General Motors are contemplating striking; C. I. O. strike in the United Engineering & Foundry Co., at Vandergrift, Pa.; thousands of workers were ordered on strike in 60 California canneries. This is the peak of the season. A proposed strike at the Murphy Body Corporation.

There, no doubt, are many others that are not listed here, but when one stops to contemplate the ramifications of these strikes, he knows that at least $594,000,000 of our war orders will be affected, as outlined above, with a possibility of the strikes affecting some $5,000,000,000, when consideration is given to all of the ramifications affected.

These strikes, in nearly every instance, are carried on by destructive labor leaders, who have not the interest of the rank and file of their workers at heart, nor the interest of the country at heart, but who are motivated purely by hopes of selfish gain regardless of whether they destroy their country or not. In some instances these strikes are outlawed. This is indicated by the statements of William Green, of the American Federation of Labor, in speaking of the strike at the shipyards in San Francisco. In all fairness, I believe that Mr. Green should be commended for his attitude and his statement that there should be no strikes in his unions, and wherever they do occur in his union they are outlawed and beyond his control.

Contrast this constructive attitude with the destructive attitude of the C. I. O. The C. I. O. leader is highly trained by

Communists and subversive interests to hit the strategic places where they may do the most damage, and therefore make the greatest threat to our defense program. As proof of this, they pick the shipyards, the powder plants, and have even not overlooked going away out on the desert in California and Nevada and striking at the borax works, which certainly produces strategic products that affect many industries. These communistically trained traitors and expert saboteurs certainly know where to strike an industry so that many others will be either slowed down or shut down, while all of these boards, Cabinet officers, and organizations set up to care for these things appear to be spineless and lack the intestinal fortitude to really stand up and stand out and represent the real interests of the great United States of America.

It appears to me that every time a showdown has come these weak representatives of United States of America have retreated. I say this because I am counting the results, and it is a reflection on the weak-kneed, mealymouthed policy of the United States Government representatives who have not had the guts to do the things they ought to have done for our defense program. Where has strong leadership gone? Where has patriotism gone? Where have real honest-to-God men gone, that this country can not obtain men in key positions who will put the interest of this country above any other interest? Has it come to a point where a man, in order to qualify for any position in this country, must be Russian-trained; must be Russian-born; must be a Russian revolutionist? It certainly appears so because every key position we have is filled by one of these or by one who, it is necessary to explain, is "no longer a Communist," or "no longer a fellow traveler," or "no longer a subversive interest." It is admitted that these people have been these things, and now they are admitted into the very heart of our Government to carry on their propaganda if they so choose.

As further evidence of this, take our so-called Secretary of Labor. I say so-called, because Madam Perkins has been the greatest failure that the country has ever known, and if there ever was a time when our country needed leadership in its Labor Department it is now. Every person in the United States knows the Perkins communistic, socialistic attitude, with her leaning to the left, and I think her statement on strikes exemplifies what she is when she says, "The right of the C. I. O. to strike is paramount to the right of the United States to have a defense program."

If God were good to this country, the greatest thing He could do today would be to send us some strong leaders who had no fear of anybody when the interest of the United States Government and this whole country were at stake. He would take away some of these mealymouthed defenders who are always friends of the Communists and subversive interests in court.

Why will representatives of the United States of America stoop to even talk to the Russian-trained Walter P. Reuther, who the record of this Congress shows to have gone to Russia and come home to carry out the Communist idea of government, and here and now we find him not only dictating to hundreds of thousands of men as to what they should do, but we find weak-kneed, mealymouthed, hypocritical, socialistic excuses of men as Government representatives dealing with these Communists and dignifying them in labor.

There is the Russian-born, foreign, Russian revolutionist Hillman. There are many others who could be named.

This is a fair question. Out of the 130,000,000 people in the United States, are there not enough tried and proven American patriots, whose loyalty and devotion to their country is unquestioned, to be placed in these key positions and to get rid of every questionable character in government? I still think there are, and I further state that if this country is going to continue as an American Government, these subversive interests will have to be thrown out, and honest-to-God, proven and trusted Americans placed in charge of our program.

I think this whole plan of mediation on labor has been a tremendous failure. Let us look at it. Have they settled anything? I say they have not. Every time these bandits, jackals, highjackers, communistic, revolutionary labor leaders have made a demand, what has happened? The answer is that the mealymouthed, weak-kneed, unpatriotic, cowardly representation of the United States Government has given in to the traitorous leaders who cut the throat of this Government's defense program. They have been a bunch of "yes" men, and in every instance have given in to every demand. They then say, "Look what we have done." Thank God, a few of us can see what they have actually done. Their sentiment reminds me of a bandit meeting a man on the street and sticking a .45 revolver into his belt and saying, "Give me your money." The victim forks over his money. That is the kind of compromise that our weak-kneed, mealymouthed Government representatives have made in their defense program.

That is the kind of conduct that is going to destroy this Nation unless the representatives of this Government change their attitude and show some intelligent strength where strength ought to be shown, or not only this armament program is going down, but the Nation itself is going down with it. I think this matter has been muddled along with long enough, and with Cabinet officials and others, with the consent of the administration, shouting "War," I think the situation is extremely dangerous.

I think the first step would be to get Madam Perkins out of the Cabinet, and I expect to lay on the Speaker's desk a petition to the President asking for her retirement. I would appreciate every Member in this House signing this petition in order that the President may really know what the country in general thinks of this labor situation.

I think the patriotic young manhood who have acquiesced in their service to government and who are serving for $21 a month, should be protected, and that these officials should bear in mind that when they cave in on these unjust demands of labor racketeers they are not only paying them many, many times as much as our young men receive for being drafted, but they are adding an additional burden to those who may be survivors of this young manhood, in the taxes they will have to pay in the future. Our young manhood are not blind to this, and while they are serving in training camps they are relying upon their officials and Congress to protect them, and I hope that these officials and Congress will not violate what amounts to a trust and not give these young men the fullest protection by turning these jackals back. If these men can lay down their lives to fight, then the least that high Government officials can do is to do their duty along their respective lines.

This Government has drafted these men, who know no hours and practically no freedom of action, and I say to you, therefore, that if these men accept that in the American spirit in which they have, no individual racketeer, nor any group of racketeers, has any right to strike at any place, at any time, against the defense program of the United States.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. BUTLER. Mr. Speaker, in the course of a visit last week end in the Forty-second New York District, which I have the honor to represent, I encountered an alarming and widely circulated rumor that advocates of the proposed St. Lawrence seaway are hatching an undercover plot to gain congressional approval of this economic monstrosity by trickery. It is reported that our visionary friends backing the seaway project are preparing to attempt to inveigle the Congress into perfunctory authorization of the seaway by slipping through a casual amendment to some vitally necessary defense measure. In view of the subterfuge already resorted to by the administration to evade constitutional provisions respecting ratification of treaties with foreign nations, I have no doubt that such a conspiracy is in the making. That seaway advocates will succeed in their strategy is inconceivable because of the economic havoc which the proposed St. Lawrence channel to the ocean would impose upon the United States. But it is none the less timely that those of us who are everlastingly opposed to perpetration of this national folly should take warning and be on guard against parliamentary sleight of hand.

Moreover, I want to incorporate in the record that the people of New York, where the seaway fallacy is well understood, are overwhelmingly opposed to this

development and deeply resent the effort of the administration to propagandize the St. Lawrence project as a defense measure, which it is not from whatever angle we approach it. If the proposition were submitted to vote of the people in New York State, which, by the way, is the only 1 of the 48 States bordering on the St. Lawrence River, it could be predicted with confidence that less than 10 percent of the electorate would favor the seaway. I am sure less than 10 percent of the New York Members of the Congress would dare to vote approval of the project.

Seven years ago the Senate refused to ratify a treaty with Canada authorizing the seaway. And that Senate roll call indicated plainly that such a treaty never would be ratified.

Now the administration stoops to evasion of the Constitution. It is proposed to "jimmy" the proposition through as an executive agreement, thus dodging the procedure for treaties defined by the Constitution. This smacks too much of the methods pursued by Hitler and Stalin. In effect, if the American Constitution raises obstacles to realization of executive dreams—detour the Constitution. Of course, the next step would be abrogation of the Constitution and full-fledged dictatorship. The American people want national unity, but not at the expense of the Constitution and the Bill of Rights.

The contention of the President and his close advisers that the seaway is essential to defense is a preposterous imposition on American common sense. To begin with, the seaway could not be completed before 1947 or thereafter. This fact alone would disqualify the seaway as a defense measure in the present emergency.

Diversion of manpower, material, and money to seaway construction at this critical stage of world-wide emergency would seriously—yes, probably criminally—obstruct and impair national preparedness. Defense industries and agriculture are now facing a shortage of personnel. The outlook will grow much worse before it is better. The American people are confronted with a heart-breaking tax burden. We cannot afford to waste manpower and money to chase an economic will-o'-the-wisp for gratification of an Executive whim.

Even if the seaway had merit otherwise, it would be ice-bound nearly half of each year.

A defense measure that only works in the summer months would not afford much security.

Spanning the international boundary—the Niagara River—at Buffalo is the Peace Bridge, so named as a symbol of a century of unarmed peace between the United States and Canada. The seaway would make it imperative for both the United States and Canada to maintain armed fleets on the Great Lakes and extensive fortifications from the mouth of the St. Lawrence River to Duluth on the upper Lakes. It is not contended that an unbroken line of forts halfway across the continent and armed fleets on the Great Lakes would lead to breach of peace between the United States and our friendly neighbor over the border, but the inspiring ideal of peace without armament would no longer enthuse the peoples of the two nations.

Seaway sponsors lately have tried to catch the gullible by urging the project so that the Great Lakes' shipbuilding facilities could be employed in building warships. Already smaller fighting ships are being built on the Lakes and will find their way to the ocean in due time through the existing channel. The Government has not yet scratched the surface of possibilities in construction of smaller types of war vessels at inland yards. But to imply that battleships and cruisers could ever be built along the Great Lakes is pure buncombe. The projected channel of the seaway would not accommodate big fighting ships, and even if the channel were to be much deeper it would not be practical to construct heavier fighting ships on the Lakes. The seaway would be wide open to sabotage. One well-directed bomb would close the seaway to traffic, and all shipping within the Great Lakes would become landlocked indefinitely. Thus, this latest propaganda bubble "We need the seaway for defense" bursts of its own flimsiness. The seaway would obstruct national defense through misdirection of national energies and resources. It would become a defense liability.

Unbiased surveys repeatedly have exposed the seaway as an economic fallacy. It was because the seaway would be wasteful, impractical, and an economic boomerang that the United States Senate rejected the treaty in 1934.

The seaway would not provide new transportation where none exists. At best it would only afford surplus transportation in competition with established facilities for about 6 months of each year. The dislocation of established industry and transportation would be disastrous. Staggering property loss and widespread unemployment would result. The seaway would place the prosperous Great Lakes region at the mercy of tramp steamers from all points of the compass. These tramp steamers would flood the Middle West with cheap products from Europe the Orient, and South America. Labor and agriculture of our country would be forced into ruinous competition with the peon and regimented populations abroad. Our wage scales would be broken down and American living standards would be undermined.

The main support of the seaway project since it first became a question of national debate some 30 years ago has come from the Middle West, which has been lured by the counterfeit picture that Chicago, Milwaukee, Duluth, and other inland ports would be transformed into centers of commercial shipping like New York, Boston, Liverpool, Seattle, San Francisco, and other ocean-fronting cities. It is proposed to bring about this transformation with a 2,300-mile channel drawing 27 feet. Well, these inland ports would become havens for tramp steamers, but the *Queen Mary* would never dock at Chicago. The long, narrow, winding channel would be too costly and too slow for substantial merchantmen. Operation would be too hazardous. It has been estimated that scarcely more than 5 percent of the shipping of American registry would use the seaway, while the route would be wide open for the tramps. Certainly there is no encouragement in this proposition for development of a profitable American merchant marine.

Our country and Canada are good neighbors. A brotherly feeling exists on both sides of the border. But is it wise to invest upward of a billion and a half American dollars in an international waterway which our country cannot control? For, after all, the first 1,000 miles of the proposed seaway up the St. Lawrence River would be entirely in Canada. Also the Welland Canal—key to passage into the Middle West—is owned and operated by Canada on Canadian soil. American shipping always would be subject to charges and regulation by Canada.

The welfare of American labor, industry, agriculture, and transportation demands that this crackpot project be shelved for all time. Its construction would imperil national defense, impose serious economic dislocation, and disrupt national unity.

Anniversary of the Labor Encyclicals

EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

RADIO ADDRESSES OF REV. JOHN A. RYAN, HON. JOSEPH P. O'MAHONEY, OF MONTANA, AND HON. ARTHUR D. HEALEY, OF MASSACHUSETTS

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses:

ADDRESS OF RT. REV. MSGR. JOHN A. RYAN, D. D., DIRECTOR, NATIONAL CATHOLIC WELFARE CONFERENCE

On May 15, 1891, Pope Leo XIII issued his famous encyclical letter On the Condition of Labor, the Latin title of which is Rerum Novarum. Exactly 40 years later Pope Pius XI issued his encyclical On Reconstruction the Social Order, the Latin title being Quadragesimo Anno. This brief broadcast by Senator JOSEPH O'MAHONEY, Representative ARTHUR HEALEY, and myself is intended to commemorate the fiftieth anniversay of the first, and the tenth anniversary of the second of these great Papal documents.

Concerning the bad distribution of wealth and income, Pope Pius XI says: "The immense number of propertyless wage earners on the one hand and the superabundant riches of the fortunate few on the other is an unanswerable argument that the earthly goods, so abundantly produced in this age of industrialism, are far from rightly distributed and equitably shared among the various classes of men. Every effort, therefore, must be made that, at least in future, a just share only of the fruits of production be permitted to accumulate in the hands of

the wealthy and that an ample sufficiency be supplied to the workingmen."

What is ample sufficiency? Pope Pius defines it in the following terms: "The laborer's wages must be sufficient for the support of himself and of his family; sufficient to meet adequately ordinary domestic needs; sufficient to enable him to bear the family burden with greater ease and security; sufficient to free him from hand-to-mouth uncertainty; sufficient to support life's changing fortunes; sufficient to make some little provision for those who remain after him; sufficient to acquire a certain moderate ownership."

These specifications show that Pope Pius demanded something more than a bare living wage, something more than the minimum means of day-to-day livelihood. At least one-third of American workers are still living below this Papal standard.

How should the product be divided between capital and labor? In the words of Pope Pius XI, "The distribution of created goods must be brought into conformity with the demands of the common good and social justice." This is the Pope's answer to the question "How much of the product should go to the capitalist?" Only as much as is required by the common good. Therefore, if an interest rate of 2 percent, or even 1 percent, will induce men to provide all the capital that the community needs, the capitalist has no right to claim more than 2 percent. Therefore the recent plea of the steel industry for a rise in the price of their product, which would enable them to get higher profits than their 2-percent average during the last 10 years, is lacking in persuasiveness.

Lower interest rates are likewise required in order to bring justice to the workers. Labor cannot obtain a larger share of the product unless capital receives a smaller share. The only way to reduce the share of capital is by reducing the rate of interest. A considerable reduction in the interest charges upon industry would make possible at least five beneficent changes in our economy: First, higher wages for labor; second, lower prices to consumers; third, increased demand for goods; fourth, a decreased capacity for oversaving and excessive investment by the well-to-do and the rich; and, fifth, a reduction in our intolerable burden of mortgages and all other kinds of debts. All these benefits and reforms are implicit in the Pope's principle that capital's share of the product must be brought into conformity with the demands of the common good and social justice.

Concerning labor unions, Pope Leo XIII declared, "speaking summarily we say lay it down as a general and perpetual law that workmen's associations should be so organized and governed as to furnish the best and most suitable means for attaining what is aimed at; that is to say, for helping each individual member to better his condition to the utmost, in body, mind, and property." This comprehensive principle implicitly condemns the company union, the nonunion shop, and all the other devious devices by which labor is deprived of the opportunity to organize effectively, and to bargain collectively; it implicitly approves the National Labor Relations Act. The first step toward industrial peace and industrial justice is adequate cooperation between capital and labor. Unless employees have their own independent unions they cannot cooperate intelligently or effectively with the representatives of the employers.

The last statement that I shall present deals specifically with this matter of employer and employee cooperation. When employers are really unable to pay decent wages they should, says Pius XI, in Quadragesimo Anno join forces with their employees "to overcome all difficulties and obstacles, and let them be aided in this wholesome endeavor by the wise measures of public authority."

The five statements that I have quoted from the encyclicals are at once a comprehensive description of our economic maladies, and an indication of the way to complete business recovery. We must have a better distribution of the product, ample living wages for all workers, a smaller return to capital, effective organization of labor, and adequate cooperation between business, labor, and the Government.

STATEMENT OF SENATOR JOSEPH C. O'MAHONEY, OF WYOMING, TO THE CATHOLIC CONFERENCE ON INDUSTRIAL PROBLEMS ON MAY 10, 1941

May I first say that I recognize and appreciate the honor which has been extended to me today in being permitted to participate with Monsignor Ryan in this broadcast, commemorating the anniversary of the great labor encyclicals of Pope Leo XIII and Pope Pius XI. The great services for labor and the common man which Monsignor Ryan has performed during a long and fruitful life are well known to all students of our economic and industrial life. He has been a faithful spokesman of the principles of common justice laid down by two far-seeing pontiffs, and it is a real distinction to be permitted to share a broadcast with him.

If one wonders how it happens that a religious teacher in Rome 50 years ago called the attention of the whole world to the need of solving the labor problem, and how a successor 40 years later pointed an unerring finger to the need of a reconstructed social order, the explanation will, I think, be found in the fact that both of these great pontiffs based their teachings upon the principle of human freedom and the dignity of the individual. It was for the improvement of the condition of each individual "in body, mind, and property" that Pope Leo issued the encyclical of May 15, 1891, and it was to summon the world to a reconstructed social order based upon the right of property that Pius XI in 1931 made his plea to mankind.

It seems to me that the significance of this occasion would be wholly lost if we should fail to note the contrast between the ideals and principles enunciated by the popes and the doctrines which are today being enunciated by the leaders of the totalitarian world. The conflict which threatens to engulf all civilization is a conflict between two diametrically opposing philosophies, one of which, preached by the dictators of Germany, Italy, and Russia, completely denies the right of the individual to either political freedom or private property and makes him the serf of the State, while the other, cherished for centuries in the hearts of the people of this country and their progenitors, proclaims that the State and all other human organizations are created by men and must be controlled by men for the cultivation of their material and spiritual welfare.

The social justice which the popes preach, the social justice which is the ideal of American democracy, is that which is wrought by men working together in equality for the common good.

To me this seems to be a summons to perceive that men are, in fact, as the American Declaration of Independence has it, created equal and that equality of opportunity and of right, both economically and politically, must be maintained just as in the sight of Heaven all men are also equal.

The attainment of the goal of an improved status for labor and the establishment of social justice is not, I take it, to be effected by any development of what we call class consciousness, nor by the waging of a class war out of which either a proletarian or a Fascist dictatorship may emerge. The conflict between labor and capital is only a passing phase resulting from the fact that there has been an undue concentration of property in the hands of some. If labor has the right, as we must acknowledge, to possess the fruit of its toil, that is to say, to become endowed with property, then the worker has the right to become the capitalist. There is no real antagonism between the worker and the capitalist. A just social order will protect the rights of both and neither will find it necessary to prosper at the expense of the other.

To me it has always seemed an utterly mistaken belief that capital may prosper only by the exploitation of labor, or that labor may improve its status only by depriving capital of something that it properly enjoys. That is the tragic mistake which has been the cause of so many bitter and bloody wars. Providence has placed us in a world which produces more by far than the imagination of man has yet been able to learn how to use.

There is enough for all, and our problem is to learn how to distribute it among all by that cooperation of business, labor, and government of which Monsignor Ryan has spoken.

Man's progress in the arts and sciences has been marked by a steady increase in his capacity to produce. Instead, therefore, of attempting to reduce production and then quarreling with one another over the distribution of an artificial scarcity, our thoughts should be focused, as the popes have so wisely advised, upon a more equitable distribution of an ever-expanding abundance.

In commemorating today the memorable encyclicals of 1891 and 1931 which emphasize the right of the individual thus to share in the production of society, it is appropriate to take note of the fact that the present pontiff, reasserting the principle enunciated by his predecessor, has again in a memorable encyclical proclaimed the sovereignty of the individual. Pius XII, in his encyclical of 1929, quoted the declaration of Leo XIII that the state exists to govern the commonwealth according to immutable law which recognizes the spiritual dignity of the individual.

He declared that when the state does recognize that principle, as this Republic always has, "it will help the individual human being to achieve his own perfection in the present world in all that concerns his physical, mental, and moral well-being and so promote the attainment of his supernatural end." In this and numerous other eloquent pronouncements the popes have always emphasized a fundamental principle of Americanism that the individual is superior to all organizations which he creates for his material and political advancement.

STATEMENT OF HON. ARTHUR D. HEALEY, OF MASSACHUSETTS, SATURDAY, MAY 10, 1941

Briefly and with characteristic penetration, Monsignor Ryan has disclosed the great vision and revelation of the Encyclical, Rerum Novarum, of Pope Leo XIII and its clarification and amplification by the encyclical, Quadragesimo Anno, of Pope Pius XI.

Promulgated 50 years ago today, the encyclical of Pope Leo XIII conclusively repudiated the extreme and conflicting claims of socialism on the one hand and archconservatism on the other, enunciating the sound Christian and democratic doctrine that has served as a blueprint for the attainment of social progress and justice for half a century.

Had the minds and souls of men and nations been less dwarfed by self-seeking, there might have been built on these solid teachings of the holy fathers a world-wide social and economic order which could have averted the terrible disaster which threatens to destroy a large part of the civilized world.

As Monsignor Ryan has pointed out, these documents both diagnosed the ills and prescribed the remedies of our social system, not

in obscure and equivocal language, but in clear and unmistakable terms.

It is entirely fitting that in this Nation of freedom and democracy we should commemorate with reverence and gratitude the anniversaries of these two great papal encyclicals. Here in America we have made great social gains—gains which fit squarely into the pattern suggested by the holy fathers. The American way of life has been the principal beneficiary of the inspired Christian teachings of those documents.

The majesty and dignity of the individual is respected and protected as never before in history. While individuals in other lands have been regimented and reduced to the status of mere chattels of the state, Americans are assured of personal liberties unrivaled in any other nation or period of history.

We have passed through a decade of great stress and emergency. Yet we have emerged with our liberties augmented and enhanced. In more abundant measure than ever before, we enjoy freedom of speech, press, religion, assemblage, and the other great privileges that make up our precious heritage.

No autocratic hand has torn the child from the bosom of his family for indoctrination in false precepts; nor sought to stifle the minds and souls of our citizens. The individual is the custodian of his own soul and may fearlessly worship his God according to the dictates of his conscience.

The 50 years that have elapsed since Pope Leo XIII's great pronouncement have witnessed the accelerating growth of a new phase of democracy—industrial and economic democracy. The condition of the great masses of workers has been greatly improved and labor has risen to new dignity and responsibility. This growth has been achieved principally through the development of the organized labor movement and the instrument of collective bargaining. It has accorded squarely with the methods suggested in Rerum Novarum and confirmed in the Quadragesimo Anno.

Today, in the stress of national emergency, there are many who advocate abandonment of social gains and curtailment of labor's freely won rights. No persuasive case has been made out for the necessity of such a retreat from our social objectives, and in the absence of such a case, we cannot safely overlook the fact that the social gains we have achieved have become integral parts of the great American heritage and tradition which we are determined to defend. We cannot preserve that heritage if we despoil it of its substance.

The great masses of Americans who have benefited by these social advances are no less patriotic than other groups. They are willing to make any sacrifices that the national good may require but will resent compulsion. Democracy has flourished because it is founded on voluntary cooperation and inspires the individual to the highest efforts. The adoption of coercive legislation will impair the very mainsprings of democratic action and will serve neither the defense nor the cause of democracy.

The immediate need is national unity * * * in the factory, office, shop, and every other branch of our far-flung economy. We shall have that unity only so long as the great body of Americans have faith in our form of government and are inspired, not intimidated, to defend it. In the faith that our Government is dedicated to the promotion of the general welfare and the attainment of social justice lies the source of our national unity and the strength of America. We cannot afford to impair that faith for less than sound and compelling reasons.

Half a century of flux and change, punctuated by emergency and crisis, has demonstrated the solidity and truth of the teachings of these great encyclicals. In the troubled days that are ahead, they can serve as unshakable beacons to guide us safely to the attainment of an order based on Christian principles of social justice. In the words of Pope Pius XI:

"In order that what has been well begun may be rendered stable, that what has not yet been accomplished may now be achieved, and that still richer and brighter blessings may descend upon mankind, two things are particularly necessary: The reform of the social order and the correction of morals."

"Wings Over Jordan"

EXTENSION OF REMARKS

OF

HON. JEANNETTE RANKIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Miss RANKIN of Montana. Mr. Speaker, I think the people of America will be interested in reading the beautiful tribute to motherhood which was delivered in Cleveland, Sunday, May 11, 1941, by the gentlewoman from the Twenty-second Ohio District, FRANCES P. BOLTON. Following some very beautiful spirituals sung by the Wings Over Jordan chorus under the direction of Mr. Worth Kramer, the Reverend Mr. Settle introduced Mrs. BOLTON, who delivered the following address, which was broadcast on a national radio hook-up:

Thank you, Reverend Settle, for your gracious introduction and for the privilege of being a part of your devotions on this particular Sunday.

Every Sunday you reach the hearts of many people. Every Sunday the beauty of your music, the sincerity of your ministry draws thousands upon thousands of us a little nearer together, and a little nearer to a consciousness of God's need of us and our ever increasingly deep need of Him.

And on this May Sunday this is especially true, for it is Mother's Day!

Mother's Day! A day on which everywhere in this great land of ours, mothers are especially remembered and honored, and all our people stop for a moment to do homage to those through whom they received the great gift of life.

Just for these few minutes let us draw close together. Let us quiet our hearts. Let us stop the mad whirling of our anxious minds. Let us take ourselves away from war, from hate, from misunderstanding. Let us be still, deep down within ourselves so that we may indeed hear the "Wings" that are, and have been, and always will be "Over Jordan." Let us be still and know that He is God.

Yes; this is the 11th of May, the day that has been set apart from other days so we may pause and honor motherhood.

Everywhere in these United States, today, as yesterday in Mexico, mothers are being especially remembered. Meetings are being held in their name and flowers and messages are being sent and received. Let us who are drawn together through this wonderful medium of radio pause and think about all mothers, for they are the reason for the day. And, as we pause, let us send out a message of love and understanding to the mothers who have no one remembering them, to the mothers whose hearts are filled with sadness, disappointment, regret, misunderstandings, loneliness, agony, and fear. Let us reach out to them.

And let us consider motherhood a moment. Did man have anything to do with making mothers? No; God did that, and He made them universal—an experience that every race shares with every other race. For everyone that ever lived on this earth had a mother, and everyone who ever will live on this earth will have a mother, and every girl and every women dreams sometime in her life of motherhood; just as every boy and man dreams of the mother who bore him and of the mother of his children. So we who reach out to each other on this Mother's Day, reach out and touch a deep universal experience that should bring us very close together, that for today at least should break down the walls of misunderstanding that have grown up through the centuries.

Does God say to one part of mankind you shall not have mothers? No—rather, He says: Remember that no soul can come to life on earth except a woman goes down to the depths, to the very gateway of death—alone—to open that gate so that life may flow through her, into another human being. Have you thought of that?

And have you ever thought how many women have known only fear and desolation in their motherhood, yes, since the very beginning of time? Can we not promise each other as we join together on this beautiful May morning, that we will find ways to change this in tomorrow's world?

Today when there is so much cruel destruction, so much ruthless waste of life, let us stop and remember the cost of giving life, the courage, the fear, the agony, and the glory of it all.

As a nation we are confused but if we remember these things we shall stand firm against the pressures hammering us on every side that try to force us to accept war as the only solution for the problems of today. If we remember, we shall insist that America be made strong and impregnable, that America preserve the freedom that still is hers, so that when the fury of this carnage dies the light of hope may be rekindled from her torch and a new world be born.

Mothers of this Republic, let us be true to one another, and to the mothers of tomorrow's world. God gave us the task of giving life not death.

Let us not fail Him.

Federal Reclamation Program Stabilizing Influence to All

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

STATEMENT BY HON. HARRY B. COFFEE OF NEBRASKA

Mr. COFFEE of Nebraska. Mr. Speaker, under permission granted by the House, I am inserting herewith my statement in support of the Federal reclamation program before the House subcommittee on the Department of the Interior appropriation bill. The statement follows:

Coming as I do from a district in Nebraska which contains the greater part of the North Platte Federal reclamation project, I can testify to the stabilizing influence of this

program on agriculture as well as on the cities, towns, and surrounding range land which that agriculture supports. Members of this committee may know the comparisons which have been made between Scotts Bluff County, dominated for more than 30 years by this Federal irrigation development, and other counties in the State, as well as other arid regions, which do not have the advantages of water conservation. I would like to summarize a few as material evidence in point:

In 1900, Scotts Bluff County had 2,552 inhabitants, and was almost wholly dependent upon dry farming and cattle raising. Construction of the North Platte project began in 1905, and by 1910 the population had increased to 8,355. By 1920, the number of inhabitants was 20,710 and by 1930, 28,644. From 1930 to 1940, this county again increased its population, reaching 33,875.

While the State of Nebraska as a whole lost population at the rate of 4.7 percent from 1930 to 1940, Scotts Bluff County's population increased 18.3 percent. The city of Scottsbluff, which has expanded as the county has become stabilized, showed a gain in population of 41.5 percent.

When you consider this remarkable increase, coupled with the fact that 77 of Nebraska's 93 counties showed a decrease in population from 1930 to 1940, you get the full significance of what a Federal reclamation development contributes to the stabilization of agriculture and cities and towns dependent on it.

There is another type of irrigation development in my district which I desire to call to your attention. The Mirage Flats project, authorized and being built under the water conservation and utilization program, will serve a double purpose. It will stabilize an area where there have been frequent crop failures due to drought, and it will enable this section to support a larger population, which otherwise would be dislodged and forced to join the trek of migrants westward or in some other direction.

The Mirage Flats project, which will irrigate 12,000 acres, according to Farm Security Administration estimates, will provide for the settlement of 150 families on farms where they will be self-sustaining. Through land-use readjustments in the area and the winter feed that will be provided for livestock, the project will directly benefit another 120 families.

Work which has just gotten under way will provide employment for 4 years for 200 W. P. A. employees and for 400 Civilian Conservation Corps enrollees, who otherwise might be engaged in less permanent construction activities.

The construction of the Mirage Flats project, which will cost in all $2,560,000, will require only $985,000 directly from the general Treasury and that will be reimbursed by water users. The remainder, represented by W. P. A. and C. C. C. labor, will be a contribution by the Federal Government to the stabilization of an area where relief expenditures have been unduly heavy due to circumstances beyond the control or remedy of the local citizens. I recommend the decided benefits to the National Government through putting W. P. A. and C. C. C. expenditures into this permanent conservation work.

These observations show the results that have already accrued from an established Federal reclamation project and what may be expected from continuance, and I trust expansion, of the water conservation and utilization program, especially in the Great Plains.

The appropriation proposed for the water conservation and utility projects of $3,500,000 is not enough to expedite construction of new undertakings of this type. It should be at least $5,000,000.

The Bureau of Reclamation should have adequate funds to carry on its investigations of the water supplies of the West. The $500,000 proposed in this bill should be increased. There are many proposed irrigation projects in western Nebraska as well as in the other Western States that merit investigation by the Bureau of Reclamation. Adequate funds for investigation would tend to bring about the development of the most worth-while projects.

20 Questions America Must Not Dodge

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. LANDIS. Mr. Speaker, in the past 2 years I have listened to many warmongers beating the tom-toms. My pledges in the past elections were not mere campaign oratory. I have made an honest effort to make all of them come true. My pledge to the people of my district was to keep our American boys out of foreign struggles unless we were attacked. I have voted against every step which I believe would lead to war. As a veteran of the first World War, I fervently believe that we should never again soak Europe's soil with American blood.

We are at the crossroads of America. On the decisions now made by our people and their leaders may depend our national welfare for years to come.

The minds of the American people are confused. The issues must be presented to the American people openly, honestly, and squarely. I respect the views of honest Americans no matter how opposed they may be to my own.

In order to avoid further confusion, the following questions should be given conscientious consideration and study:

1. Should candidates for high public offices keep their campaign pledges?
2. If we were actually in the war, do you believe we would send more airplanes and war materials to England than we are now sending?
3. Do you believe this is our war?
4. Do you believe we made a mistake in entering the first World War?
5. Do you believe we should sell oil to Japan?
6. Do you not believe that interventionists could aid England more if they spent more time in helping to increase production of airplanes and war materials?
7. Should we raise a crop of boys every 20 years to be slaughtered in Europe?
8. Do you believe convoying would lead us into actual war?
9. Would we be willing to maintain standing armies abroad and battleships in foreign ports to enforce peace after the war is over?
10. America eliminated the cash feature from the Neutrality Act. Must we eliminate the carry feature by using convoys?
11. What could America write into a peace treaty which would preserve peace and promote justice in Europe?
12. Do we want to create a new generation of Gold Star Mothers?
13. Would you be willing to risk the lives of at least 6,000,000 American boys and $200,000,000,000 in a struggle across the seas?
14. Do you believe it would be easy to transport and land millions of American boys on unfriendly soil?
15. Are we to rush arms and the cream of the American Navy, Army, Marines, and air force every time Europe is in trouble?
16. Would you be willing to neglect our own defense by sending most of our war equipment to foreign lands?
17. Do you believe Hitler could make a successful invasion of the United States if we have the proper defense?
18. Do you believe foreign trade will amount to much, after this war is over, unless we furnish the money to other countries to buy our goods?
19. Do you not believe that right ideals can move eastward from this continent to Europe as readily as wrong ideals can move westward from Europe over here?
20. Would we be willing to support the four freedoms everywhere, by sending American sons to rot and die on foreign fighting grounds, battling for a peace no man has yet been bold enough to define or wise enough to propound?

I challenge the proponents of war to answer these questions honestly and fairly.

We Must Face a Grim Future

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE BY ROBERT L. NORTON

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert L. Norton from the Boston Post of yesterday:

[From the Boston Sunday Post of May 11, 1941]

WE MUST FACE A GRIM FUTURE—STARTING WITH TERRIFIC DEBT, NATION SPEEDS INTO AN ORGY OF SPENDING WITH ECONOMIES IGNORED

(By Robert L. Norton)

In facing the grim realities of the future it is just as well to accommodate ourselves to the fact that instead of "guns and butter," the prospect is for guns and short rations.

As a nation and as individuals we are shortly to be called upon to pay the piper. The Federal deficits, totaling $45,000,000,000 since 1931, are hanging like a millstone around the necks of our people and, in addition, we are facing colossal defense expenditures and the possibility of a war effort which will employ our total resources.

On another like crisis in our history, Patrick Henry said: "This is no time for ceremony. The question before the House is one of awful moment to this country. It is natural to indulge in the illusions of hope. * * * Are we disposed to be of the number of those, who having eyes, see not, and having ears, hear not, the things which so nearly concern their temporal salvation?

"For my part, whatever the anguish of spirit it may cost, I am willing to know the whole truth—to know the worst and to provide for it."

MUST REALIZE TASK

It is quite as dangerous for us in 1941 to shroud reality with illusions of hope as it would have been for our forefathers, had they done so, 165 years ago.

It should be perfectly clear that if we are to cope with our present gigantic task and those which are in front of us there should be a comprehension of the size and character of our undertaking.

At the outset it should be obvious that we cannot step up our production with men and materials and meet the demands of the defense program and at the same time maintain our normal regime.

Except that we are committed to the greatest war effort in our history, the size and the limits of this effort are not yet apparent, although our present occupation is startling enough in its implications. We have not declared but our policy of aid to Britain as represented by an initial contribution of $8,000,000,000 is joined with the purpose of seeing the war through to the finish and until the Axis nations are defeated.

What this will mean in the finality surpasses any effort of the imagination and defies rational prognostication. We are quickly edging into total war through successive steps taken in Washington and against the unquestioned will of the majority of the people.

Mr. Roosevelt has failed to deal frankly with such questions as to whether or not his determination to achieve victory means an invasion of Europe by an armed force, the preservation of British autonomy in Asia by going to war with Japan, and whether we shall pursue the war to establish "four freedoms" in the world, in case England should fall.

All of these questions are of vital concern but in lieu of a definite statement of war aims we, too, are blundering through in the much vaunted English fashion and without giving the cold consideration to our own best interests which common sense should require. The plain fact is that we have undertaken to vanquish the greatest combination of military power and armed force that the world has ever seen.

SELLING WAR HERE

Demands from Great Britain will increase, and today, while still theoretically at peace, we are witnessing the unique spectacle of the British Ambassador, Lord Halifax, campaigning through our Middle West trying to arouse the war spirit in that section.

Britain is not to be blamed, since her own salvation is at stake. But in America we would seem to be giving minor consideration to the matter of how far we can go without destroying our own national solvency and winding up by adopting the same totalitarian methods which we profess to despise and which we are willing to risk everything to vanquish.

It is all well enough to call for voluntary sacrifice in this hour of national peril, but people generally do not relinquish their advantages except under the spur of stern necessity. Whether we like it or not these sacrifices will be enforced by reason of gigantic public expenditures and staggering taxes.

In his Budget message Mr. Roosevelt said: "We cannot yet conceive the complete measure of extraordinary taxes which are necessary to pay off the cost of emergency defense and to aid in avoiding inflationary price rises which may occur when full capacity is approached."

The size of this tax levy is emphasized when we recall that this is nearly twice as much as were the peak collections for the last World War, when $6,500,000,000 were collected in 1920. The Treasury has asked for tax legislation to provide $3,500,000,000 in new tax collections. This is to be added to the existing tax levies which are at present yielding $9,000,000,000, making a total levy of $12,500,000,000 to be paid by the American taxpayers to the Federal Government alone in the coming year.

TAXES TO TAX US

But this is not by any means all that the taxpayers must pay in the form of taxes in the coming year. To these billions must be added $4,000,000,000 of State taxes and another $5,500,000,000 of local taxes.

So next year we, the American taxpayers, must pay our proportionate share of tax bills aggregating $22,000,000,000. This is one-fourth of all the wages, the earnings of corporations, the dividends, royalties, rents, interest, and the individual gross incomes of all our citizens * * * one-fourth of all the elements of the national income.

In the face of these astounding figures and despite the President's promise to cut nondefense costs, the Federal Government is not decreasing its nondefense spending but is continuing to spend in the same reckless and extravagant way, which is responsible for our huge public debt and which now constitutes a first mortgage on every family in the land.

Every baby born in the United States begins life with a public-debt charge of $502 against his future earnings. Every couple that marries starts housekeeping with a public debt of $1,004, in addition to what they may owe on the furniture. Every family with three children is carrying the equivalent of a mortgage of $2,510, or enough to pay for a modest home.

When the citizen must give up his job and go into the Army, or may be required to close his factory for lack of materials, or to turn over to the tax collector earnings which he expected to apply to his needs, if these and numerous other sacrifices must be made by the citizens who carry the burden, there should be no question that the agents and agencies of government should be likewise required to curtail nonessential activities and expenditures.

STILL SPENDTHRIFT

There is the same complacency now with regard to ever-increasing and accumulating deficits as prevailed before the emergency. The administration has not even made a beginning at the reduction of these expenditures despite the talk of a cut of $1,000,000,000.

Under the President's Budget, for example, $1,478,000,000 will be spent for unemployment relief during the next year, spent during a year when reemployment will soon reach a goal, as predicted by Chairman Knudsen, where "there will be no unemployment in this country next fall." Yet the Budget recommends nearly $1,500,000,000 for unemployment relief, which is four times as much as was spent for relief in 1933, the low ebb of the depression.

Mr. Roosevelt has come forward with recommendations for the expenditure of many millions for such projects as the St. Lawrence seaway and a highway to the Panama Canal, while at the same time blasting Members of Congress and pressure groups who are seeking appropriations under the guise of national defense. Certainly for the time of the emergency we might do without any of these projects.

To ask citizens to sacrifice while permitting Government agents to spend unnecessarily is inconsistent. It also savors of discrimination to offer no resistance to strikes for higher wages while taxing away earnings on capital and decreeing that prices shall not be advanced.

It should be emphasized that no one group or the Nation as a whole should fail to grasp the fact that we cannot profit out of a world calamity. And neither can we use our entire industrial machine for making the things of war, rather than the things of peace, without making a sacrifice in our standard of living.

Much is heard of the dangers of inflation these days and the Government is taking steps through the imposition of heavy taxes and the sale of "baby bonds" to decrease the consumer purchasing power. This will be easy enough in the field of middle-class incomes which are to be most heavily taxed. Persons in this class will naturally economize, perforce of necessity. But the greater purchasing power is centered in the earners of small incomes and the check here is less certain.

MUST PRESERVE SELVES

With all of our present difficulties, thought must be given to what will come after the war. It is all well enough to talk about enforcing democracy upon the world but in doing this it should not be forgotten that the objective is the freedom and the institutions of the present and the future citizens of the United States. Democracy must be saved without destroying it in the process.

Care should be taken that in the role of missionary to the world for the establishment of the "four freedoms" that we do not fail to sustain the Republic at home. We may be making promises that we cannot fulfill and exhausting resources which will be sadly needed, when and if we are called upon to fight for our own lives.

And we might finally take warning from that part of the Reynaud-Daladier report when France was facing not dissimilar problems with those of our own Nation, immediately before the war. The report said:

"Actually that part of the French population which creates wealth, which labors for the future, is continually diminishing, while that part which, directly or indirectly, lives on the state is constantly growing. There is a steady fall in the number of Frenchmen who are ready to bear the risks of enterprise and creation."

Farm Homes for Tenant Farmers

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

RESOLUTION BY THE OKLAHOMA STATE LEGISLATURE

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the House of Representatives of the State of Oklahoma:

House Resolution 51

Resolution memorializing the Congress of the United States of America to enact appropriate legislation to increase the purchase of farm homes for tenant farmers in the State of Oklahoma by the Federal Farm Security Administration under the tenant-purchase program

Whereas the experience of the Federal Farm Security Administration in purchasing farms for tenant farmers in the State of Oklahoma under the tenant-purchase plan establishes that no loss would be sustained in purchasing

farms for the many worthy and industrious tenant farmers within the State of Oklahoma; and

Whereas the purchase of farms for tenant farmers under said plan has established that ownership of farms by actual farmers results in more careful tilling and conservation of the soil; and

Whereas the purchase of farms for tenant farmers in the State of Oklahoma by the Federal Security Administration has resulted in improving the social and economic welfare of the State and Nation; and

Whereas the future welfare of the State of Oklahoma and the United States of America is greatly dependent upon the conservation of the soil and the maintenance of thrifty and prosperous home-owning farmers; and

Whereas the purchase of farm homes for worthy and industrious tenant farmers will result in improving the social and economic welfare of the State and Nation: Now, therefore, be it

Resolved by the House of Representatives of the eighteenth session of the Oklahoma Legislature:

SECTION 1. That it is the sense of the membership of the House of Representatives of the eighteenth session of the Oklahoma Legislature that the farm tenant-purchase program being carried on by the Federal Farm Security Administration should be expanded and the purchase of farm homes for tenant farmers in the State of Oklahoma should be increased and that the Congress of the United States of America be and it is hereby requested to enact appropriate legislation expanding the farm tenant-purchase program in the State of Oklahoma and increasing the number of farms purchased by the Farm Security Administration for worthy tenant farmers in this State.

SEC. 2. *Be it further resolved,* That copies of this resolution, suitably engrossed and authenticated, be transmitted to the members of the Oklahoma Delegation in the Congress of the United States, and that copies of this resolution be also transmitted to the Speaker of the House of Representatives and the Presiding Officer of the Senate of the Congress of the United States.

Adopted by the House of Representatives the 6th day of May 1941.

E. BLUMENHAYEN,
Speaker of the House of Representatives.

A Capable and Sincere Congressman

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ARTICLE BY HON. PHILIP A. BENNETT OF MISSOURI

Mr. PLOESER. Mr. Speaker, I extend in the RECORD, an article from the Republican magazine of April 1941, by my colleague from Missouri, Hon. PHILIP A. BENNETT.

It is to be hoped that every Member of the House will read the article in question because it is from the pen of one of the most capable and sincere Members of this body—a man who understands that while two strong political parties are necessary for preservation of the Republic, our loyalty must be first to our country and second to our party.

The article follows:

[From the Republican Magazine of April 1941]

KIND OF LEADERSHIP G. O. P. NEEDS

(By Hon. Phil A. Bennett)

First of all, the G. O. P. needs leadership that is true to American ideals as they were before they were tainted and weakened by New Deal propaganda.

Second, the G. O. P. needs leadership big enough to understand that the best way for leaders to serve the Republican Party is to serve the Nation.

Third, the G. O. P. needs leadership that is well-informed; that realizes it is useless to fight Hitlerism while encouraging the Communists and labor racketeers at home; that understands New Dealism must be relentlessly exposed as the enemy of the American way of life.

Fourth, the G. O. P. needs leadership that is capable of understanding that bankruptcy calls for receivership; that a national receiver is called a dictator; that the citadel of American liberty is being undermined by clever and carefully thought out plans and that the wreckers must be removed before repairs can begin.

Fifth, the G. O. P. needs leadership that has always been true to the party and that will take advantage of knowledge possessed by leaders in various lines of endeavor and by Republican Members of Congress whose whole attention is given to national affairs; who have watched the growth of the New Deal from its infancy and understand its clever methods of propaganda.

Sixth, the G. O. P. needs leadership that it not puffed up with its own importance; that is blind to factionalism; that is alert to danger; that realizes its first duty is to save liberty and second to win elections.

Seventh, lastly, the G. O. P. needs leadership with sufficient courage to back its convictions.

PHIL A. BENNETT,
United States House of Representatives,

This Is Not America's War

EXTENSION OF REMARKS

OF

HON. JEANNETTE RANKIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ADDRESS BY DR. CHARLES CLAYTON MORRISON

Miss RANKIN of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address at America First rally, in the Arena, Chicago, April 27, 1941, by Dr. Charles Clayton Morrison, editor of the Christian Century:

Before discussing the issue that is before us, I wish on your behalf to pay a word of tribute to the gallant American whose message we are about to hear, Senator BURTON K. WHEELER, of Montana. With patriotic zeal he has thrown himself into this crusade to rescue our country from the catastrophe of a war which is not America's war. The odds against him and those of us who stand with him have been and are tremendous. The facilities of action and of propaganda, and the weight of official prestige are on the side of the President and the administration. Our leaders have pursued a policy of forcing the Nation inch by inch into war while assuring us that war was the farthest from their thoughts. But their true thoughts are no longer concealed. Senator WHEELER has gone across the country like a modern Paul Revere, wakening the people to their danger and giving them courage to resist those who are leading them into it. We welcome him today on the last leg of a patriotic tour which the future may record as a historic turning point in America's destiny.

You would, I am sure, wish me also to pay a tribute to the organization, America First, under whose auspices we have gathered and to the patriotic and far-visioned men and women who, months ago, took up what then looked like a forlorn cause. They believed in the capacity of the American people to see the tragic predicament into which their Government was leading them, and by their courage they have put courage in us all. We salute you, Mrs. Fairbank, and General Wood, and all your brave and distinguished colleagues, and we rejoice to be soldiers in your army of peace for America.

All my thoughts about America's relation to the present conflict begin with the unshaken conviction that this is not America's war. The burden of proof rests upon those who declare that it is America's war. So far this proof has not been forthcoming. Such proof as has been advanced is highly fantastic and speculative. The proponents of our participation in the war seem to me to know too much. They know so much that their knowledge excites my skepticism. Let us look at some of the things they claim to know. They claim to know that this country can be easily invaded. They claim to know that Hitler purposes to invade and conquer it. They claim to know that if we are attacked we cannot effectively defend ourselves. They claim to know that if we go into the war now we can crush Hitler and save Britain. They claim to know that if we save the British Empire and crush Hitler we shall be able to live with Britain happily forever after, politically and economically. They claim to know that Britain and America together can establish order in the continent of Europe, and they claim to know that America will be able and willing to send and keep large military forces in Europe and other lands to police the chaos which will surely follow the war.

I say the proponents of the doctrine that this is America's war know too much. I do not wish to say that some of the things they know may not be true. But their vast knowledge when analyzed and carefully examined is seen to be hardly more than a tissue of fantasy and speculation and hypotheses. This kind of knowledge is too flimsy to justify the thesis that this is America's war. I am unwilling to see this country plunged into a war whose justification can be stated only in terms of fantasy and speculation and a chain of hypothetical possibilities, even though we cherish deep sentiments of partisanship for the side which would draw us into it.

I do not think, however, that we should impatiently throw into the discard the superhuman knowledge which our interventionists claim to possess. There is a sufficient possibility of truth in it to call for action on our part. The question is, What kind of action does this speculative and hypothetical outlook upon the future call for? If it is not sufficient to make this America's war, it is sufficient, you and I will agree, to require that the United States make herself strong enough within her own boundaries to defend the treasures of her civilization against an incalculable future. We can agree that the future is incalculable. No man knows enough to envisage the shape of

things to come. It therefore behooves the United States to be ready with as strong a navy as we can build, as great an air force as we can develop and as competent an army as we need to defend the independence of this Nation should the hour come when we must do so.

In a word, we ought to be prepared for America's war when and if such a war is thrust upon us. Preparedness against an incalculable future is a reasonable policy, but the plunging of this Nation into a war which is not our war, when we are not able to calculate even the consequences of victory, to say nothing of the consequences of defeat, is an irrational if not a suicidal policy. I adopt as my own the slogan of the committee whose call has drawn us together today: Defend America first.

How has it come about that the idea got itself established in many American minds that this war is America's war, that it is our duty to defy a nation that has not defied us, that it is our duty to enter the second time into the bloody arena of Europe's ancient struggles for empire and save the British Empire from defeat? One might have supposed that our experience in the last war and the disillusionment which followed it had effectively cured us of the sentimentalism which actuated us then. Certainly we thought we were cured. "Never again!"—this for 20 years has been the hearty resolution on the lips of all our people, Legionnaires, civilians, and statesmen alike.

What, I now ask, has happened to break down this resolution in the minds of so many of our citizens? My answer must be very frank. My answer is that the President of the United States, through a long series of utterances, and a cumulative series of deeds, has put the Nation in a position where public opinion is no longer free to express its deepest conviction against participation in this war. The Nation has been committed, step by step, to a war policy, steadily and stealthily committed, through a period of 3 years of official propaganda and official action until now the desperate and climactic argument for war is that we have already gone too far in to back out. This was the argument which the Secretary of the Navy made last Thursday night.

Yet the American people do not believe that this is their war. The succession of polls of public opinion reveal a constant overwhelming majority against our participation. These polls also reveal the paradoxical state of the American mind. While they show a vast opposition to war, they have consistently disclosed roughly a 50–50 division on the specific actions taken or proposed by the administration—such as the revision of the neutrality law, the transfer of the 50 destroyers to Britain, the lend-lease bill, and now the convoying of ships to the war zone—each of which registers a distinct further step toward war. How shall we interpret a public opinion which says overwhelmingly that it is opposed to participation in the war and yet weakens to a relatively even division on specific measures which carry the Nation further and further to the verge of war?

I do not think the interpretation of this paradox is difficult. The paradox in the people's mind is the reflection of the paradox in their President's policy. The American people trust their President. This spirit of trust in our leaders is of the essence of our democracy. The people are against entering the war, and they trust the President's solemn pledge that he will not take the country into it. Yet a large section of public opinion has tolerated the successive steps toward war because each step has seemed logically inevitable after the steps previously taken.

No explanation of this paradox in public opinion is possible except that the administration and its interventionist committees and supporters have deliberately exploited the trustful spirit of the electorate to produce a situation which will overwhelm America's overwhelming opposition to war by making war at last seem inevitable. This policy has been as clear as day at every step we have taken since the neutrality law was amended. It is illustrated afresh in the present convoy issue. During the debate on the lend-lease bill Senator WHEELER and his opposition colleagues repeatedly warned Congress and the country that the enactment of that bill into law would call for the convoying of ships to Britain. This was denied by the most responsible Senators representing the administration. President Roosevelt himself denied it, saying that "convoys mean shooting, and shooting means war," the implication being that the President was opposed to any act that would spell war. Thus reassured, Congress passed the bill. But now the logic of leasing and lending appears in the demand of Secretaries Knox and Hull that the United States shall guarantee the delivery of the materials which we are making great efforts to manufacture. Said Secretary Knox: "We cannot allow our goods to be sunk in the Atlantic; we shall be beaten if we do." We must find a way, declared Secretary Hull, "by which such aid may find its destination in the shortest time and in maximum quantity."

I am discussing the question I raised a moment ago: How has it come about that the idea got itself established in a large body of our public opinion that this is America's war? I have indicated the basis on which this question is to be answered. The idea has been established in public opinion, and the administration leaders now make bold to avow it, because the President of the United States, under cover of reassuring words and solemn pledges, has followed a policy of action which has involved the United States so deeply in the conflict that it is now plausible to claim that this is America's war. These progressive and cumulative commitments are now appealed to as the logic of our next step, the convoying of war materials, at the risk—I might say the certain risk—of involving us in what the President last January called the "shooting war."

What is the relevant deduction which we are bound to make from this policy of forcing public opinion? The deduction seems to me inescapable: This is not America's war; it is the President's war. By this I do not, of course, mean the war that is now raging in Europe. I am not making the charge that that is the President's war, despite the fact that there is trustworthy evidence to prove that our ambassadors, whom the President calls "my ambassadors," did give some kind of assurance that America could be counted on for help. When I say this is the President's war I mean that aspect of the war in which the United States has become involved.

The President began to wage this war long ago, perhaps at the dedication of the Chicago bridge not many yards from the spot where we have gathered today. A step at a time he has advanced his war into the consciousness of the American people by committing them to one action after another whose cumulative implications spelled ultimate and unreserved involvement. Today the Nation is awakening to the fact that its freedom to decide on the merits of the issue has been vitally impaired. Lulled by the President's assurances and pledges, America now finds itself caught in an acute and tragic dilemma. Either we must go on in a course which involves the hazard of national suicide, or turn back with humiliation for the Nation and its President. If we turn back, we call down upon our heads the execration of the British people who accepted the commitments of the President and his ambassadors and plunged all Europe into war on the assurance that the logic of our commitments guaranteed that the United States would eventually join up as a belligerent.

I dare not trust myself to characterize the moral implications of the ambiguous course which the President has followed in forcing his war upon a people whose fundamental decision not to go again into a European war remains unchanged. Again and again the President has demonstrated that no law can bind him, that he can circumvent any law that stands in the way of his determination to put the Nation into war. One by one the restrictive laws which reflect the public will have been cunningly emasculated—the Neutrality Act, the Johnson Act, and the constitutional provision that only Congress can declare war.

The President himself has already in effect declared war. He has designated the enemy and he talks in terms of victory. He has tied Congress to his war chariot, so that Congress no longer represents the people but represents the President. It does his bidding with hardly less subservience than Hitler's reichstag, which meets when he calls it together to rubber stamp the dictator's decrees.

I said a moment ago that the Nation has been forced into a tragic dilemma between going full length into the war and backing out. Secretary Knox says we cannot back out. But I say that the dilemma does not require that we take either of these two horns. We need not go on, and we need not back out. A third course is possible. We can stop in our tracks. We have already gone as far as our commitments require, which is all aid to Great Britain short of war. We can continue to fulfill those commitments. But while the people still have the power to do so, they must tell the President that he cannot take them further on the road to war. We can tell him that if he makes further commitments he will have behind him a reluctant and perhaps divided, but certainly a resentful, people.

Not since President Polk launched the unpopular and unrighteous Mexican War has any President risked war with a divided nation behind him. Behind Lincoln stood a virtually united North. Behind McKinley stood a united nation which actually pushed him into the war with Spain. Behind Wilson stood a united people convinced—albeit too easily convinced—that America should go gallantly forth to save democracy. But the Nation in its heart is not behind the President in the present war. He has the power to force the issue; he can bring about a situation which will spell war, and he has the power to plunge the Nation into the conflict by intensifying the present dilemma to the point where patriotic resistance will be outlawed. But when the President does that, it will be a tragic day for our country.

The interventionists are demanding national unity. By this they mean the shelving of all personal convictions and the rallying of all citizens to the uncritical and unreserved support of whatever course the President proposes. They tell us that the time has come when our patriotism is to be measured and tested by our loyalty to the President. I, for one, am willing to accept that test. I, too, wish to support the President; and I am here today to support him. But I have to choose which President it is I intend to support.

We have two Presidents. One President is for war. The other President is against war. I choose to support the President who is against taking America into this war. I choose to support the President who showed as long ago as 1936 how a President could take the Nation into war even against the constitutional provision which invests in Congress alone the power to declare war. By his day-to-day decisions, this President then said, he

could bring about a situation which would necessitate war or which would obviate it. He then asked our votes because he hated war and presented himself to us as one who could be trusted to make the day-to-day decisions which would keep us out of war. This was in 1936, and for this, among other reasons, he won my vote for a second term in the Presidency.

This is the President I now choose to support. I choose to support the President who, after this war came upon Europe, distinctly limited the aid which he asked for Britain as aid "short of war." I choose to support the President who in the 1940 election campaign solemnly and repeatedly declared to the mothers of America that their sons would not be sent to fight in any foreign war. I want to support that President. In giving him my loyal support I am compelled to resist the other President who has forgotten the words "short of war" and whose course since the election leads irresistibly to the breaking of the repeated pledges given to the electorate in soliciting the unprecedented honor of a third term. Mr. Roosevelt could not have been elected had he even hinted at the possibility of a lend-lease bill or of guaranteeing the delivery to Britain of the materials we were manufacturing for her.

I want to support the President, and I intend to do so. But the President I intend to support is the President we elected last November. He is our true President. He commands our loyalty. In his name our patriotism resists the other President who has risen up to displace him. I am bound to resist the President who frivolously talked nearly a year ago about 50,000 airplanes a year as America's contribution. I resist the President who lightly promised Jugoslavia help which he knew could not be delivered and led her to a cruel slaughter like that to which a similar promise by Great Britain led Poland. I am bound, in supporting our true President, to resist the President who manipulates words with such cunning cleverness as to make a "patrol" mean something essentially different from a "convoy," denying this intention to do the one while announcing the fact that he is already doing the other. In support of our true President I am compelled to resist the other President whose Cabinet members are now talking with his approval about an army and navy prepared to fight not only in this hemisphere but "in other regions," anywhere in the world. And in supporting our true President I am bound to resist the other President who degrades his exalted office by stigmatizing the name of a patriotic American like Colonel Lindbergh with the odious epithet of "copperhead" because, forsooth, he insists with great courage and candor that the President keep his pledges to the American people.

You and I are Americans. We believe in America's independence. Some of us are isolationists. I am not an isolationist. I am a noninterventionist in this war. But we are agreed on this: We are all for defending America first. We concede to no group of fellow citizens a loyalty to our country or to our President more wholehearted than our own. But we cannot support our two Presidents any more than a man can ride two horses going in opposite directions. We must choose between them. For myself, I choose to support the President who gave his solemn pledge that he would keep the country out of this war. We shall not achieve unity for our Nation so long as dissension and contradiction obtain between the words and the deeds of the head of the Nation. The purpose of our meeting today, as I see it, is to support the true President of the United States, the President whom the people reelected to his high office last November. With loyal hearts we pray: God save the President! God bless America!

State Supervision and Control of Public Schools

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. BLACKNEY. Mr. Speaker, I am vitally interested in H. R. 4545, a bill introduced by the gentleman from Texas [Mr. LANHAM], providing for the acquisition and equipment of public works made necessary by the defense program.

When this bill was first introduced, I was very skeptical as to its wisdom, particularly with reference to the sections of the bill dealing with education and with hospitals. As this bill was discussed in its early stages, there was clearly an intent that the Federal Government should have some supervisory control, at least, over the schools, but as the discussion of the bill continued, the wisdom and the good judgment of the Committee on Public Buildings and Grounds clearly maintained the old historic standard of education in America, namely, that the States should have full and complete jurisdiction thereof.

The paragraph defining this is section 203 (b), which states:

(b) No department or agency of the United States shall exercise any supervision or control over any school with respect to which any funds have been or may be expended pursuant to this title, nor shall any term or condition of any agreement under this title relating to, or any lease, grant, loan, or contribution made under this title to or on behalf of, any such school, prescribe or affect its administration, personnel, curriculum, instruction, methods of instruction, or materials for instruction.

A similar restriction was placed against Federal supervision and control of hospitals benefited under this bill in section 203 (c) thereof.

I want to congratulate the chairman and the Committee of Public Buildings and Grounds for their definite stand on the principle enunciated above. During the last few years we have seen altogether too much interference by the National Government in the internal affairs of the States until today Federal bureaus and Federal bureaucrats have greatly encroached upon the rights of every State in the Union.

One principle, however, has remained fairly intact. That is the principle that the State should have the supervision and control over the educational system of the State and should not be subject to the dictation and whims of a Federal bureaucrat. From the inception of the American Government it became a settled rule that the States should control education. This principle has been followed for years, and has produced a fine system of education in these United States.

This American policy of not interfering in the State's control of education differed widely from the European system.

During the time that our Nation was forming, England still kept her universities and public schools far removed from the commonalty, as centers for gentlemen who either intended to manage paternal estates or enter the church, the Army, the Navy, or civil service, giving the poor almost nothing except bare rudiments, offered in sectarian charity schools grudgingly aided by government doles. France under Napoleon had subjected education to the domination of the Nation. Prussia had also established a program of class education controlled by the nation.

Our forefathers, during the early growth of our country, wisely said that the proper place for the operation and control of our educational system was in the State and not the Nation.

Take my own State of Michigan as an illustration, which has been one of the pioneering leaders of education throughout the United States.

In 1817 the Legislature of the Territory of Michigan sketched in detail on paper a full program of education from the primary schools to the universities.

In 1827 the Legislature of the Territory of Michigan actually laid the foundation for our common schools.

In 1837 our State legislature, after the admission of Michigan to the Union, created our great university with its then four departments—literature, science, and the arts, law, and medicine. This was pioneer work in many respects for all the world. Other States had established fragments of such a system, but none had constructed it on so profound a basis. Nothing remained for Michigan to do in education except to elaborate the details and enlarge the structure of our educational system.

Therefore, in 1848, the Legislature of the State of Michigan, realizing that handicapped children were not receiving proper education in our State, created an institution for the instruction of the deaf, dumb, and blind.

In 1855, the Legislature of the State of Michigan organized an agricultural and industrial college, one of the first pioneering agricultural colleges in the United States.

And then to cap the climax, in 1870, the Legislature of the State of Michigan opened the doors of our university to women, thereby completing the education system of Michigan and establishing the thorough democracy of the educational scheme.

I am particularly proud of the stand that Michigan has taken on education. Therefore, when H. R. 4545 came before the House, I was especially anxious that no supervision or control of our educational system should be assumed by the Federal Government. It is my considered judgment that each State knows its educational problems better than the National Government could possibly hope to know them.

In my own State, the superintendent of public instruction and the entire school personnel of the State, superin-

tendents, principals, and all grades of teachers have demonstrated their love and zeal and efficiency for our public-school system.

Therefore, under H. R. 4545 any appropriations that may be made for any schools in areas congested because of national defense, will be administered, supervised and controlled under State jurisdiction, free from Federal interference. This is a wise principle, and I congratulate the Committee on Public Buildings and Grounds for maintaining the old historic right of the State to supervise and control its own educational system.

The Country Newspapers Are Being Imposed Upon

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

AN OPEN LETTER FROM WILL M. MAUPIN, EDITOR OF THE CLAY COUNTY (NEBR.) SUN

Mr. CURTIS. Mr. Speaker, there is no group in the United States with more patriotism and with a greater spirit of community helpfulness than the editors of our country newspapers. Yet I find that literally tons and tons of material are being sent to these editors from the city of Washington with an implied request that they publish it without charge.

An editor friend of mine kept track of all the publicity that came to him from Washington during the last week in March. This editor measured up this publicity and carefully figured the total composition. The publicity sent to him from Washington in one week, if set in 8-point type, would have required 31 pages of newspaper print to hold it.

This mean 31 pages of printing for which the editor furnishes the paper, the ink, the machinery, and pays for the highly skilled labor required in printing it. Is it right that we expect these country papers to build up a morale for the defense of this country, assist in the selling of defense bonds, and the countless other things that must be done, on any basis other than the basis upon which all other work is done in our defense program?

Mr. Speaker, I wish to further extend my remarks by including an open letter to me from Will M. Maupin, editor of the Clay County Sun, at Clay Center, Nebr. I have no quarrel with this editor. I agree with him. I do submit it to this House for such consideration as it merits and I hope that many of the publicity bureaus in Washington will take due notice of the same.

AN OPEN LETTER TO REPRESENTATIVE CARL CURTIS

Hon. CARL T. CURTIS, *Member of Congress, Washington, D. C.*

MY DEAR CARL: After a rather extensive investigation of a large number—a darned large number—of Government agencies, I have made the startling discovery that there is one essential industry that not only has not been receiving Government support but has been the target of a "helluva lot of moochers" already on either the Government pay roll or on some relief roll. We have the ever-normal granary, parity payment for agriculture, payment for crops not produced, old-age pensions, knuckling to strikers in war preparedness plants, huge salaries to propaganda writers in a thousand and one Government departments, emissaries of the food-stamp plan drawing good salaries, and so many others that it would fill the pages of the Clay County Sun to enumerate them all.

But, my dear CARL, nowhere can I find a blooming thing calculated to promote, by Federal aid or subsidy the country newspapers, of which the Clay County Sun is one. Oh, yes; the country newspaper is supposed to be aided by a so-called free-postage concession, but all the advantage it is to most of us we could put in an eye and never wink a wink.

Now, my dear Carl, I ask you and your official associates what the heck good it would do to have a small army of propaganda writers living in luxury in Washington, and at the expense of the taxpayers, if the country newspapers refused to print the stuff? How far would all this agricultural relief program get if the country newspapers refused to give the program and progress space in their columns? How far would Uncle Sam get in his efforts to promote the sale of thrift stamps and baby bonds for the financing of the preparedness program if the country newspapers closed their columns to that patriotic program? Yet, my dear Carl, everybody but the country publisher is paid, and he is expected, and usually does, to spend his money for composition, paper, ink, presswork, and postage to get the program across to the public. While doing this the country publisher is paying his share of the taxes and often more than his share in comparison with many others. Your Federal propaganda artist can have his stuff printed for nothing in the Government Printing Office and can mail it free under a frank. But we country publishers must pay for having the stuff set up in type and then pay postage on the newspaper in which it is printed. The propaganda writer gets his fat Government check every month, often twice a month, while the average country publisher just don't. He gets his if, as, and when he can.

Now we country publishers claim to be and are as patriotic as any man or woman on the pay roll as manager or employee of the many Federal spending agencies. But there is a financial limitation to the country publisher's ability to demonstrate his patriotism. Paper houses insist on being paid for their wares; printers must be paid on the dot. The presses stand idle when the pressman is unpaid. And, strange as it seems, the editor and publisher and their families must eat, and there is a law against appearing nude in public.

In view of all this, my dear Carl, don't you and your colleagues think it is about time to give some consideration to the country newspapers while all this Government promotion work is going on? We are not asking for relief, merely asking that we be given a break.

It might be possible to dispense with the services of about nine-tenths of the propaganda writers now on the Federal pay roll, thus saving their salaries and expense accounts, and the cost of getting their editorial sheets printed at the Government Printing Office, and spend the huge sum thus saved in paying the country publishers a little for the space they give to the promotion of the preparedness plan?

As for the Clay County Sun, one of the humble country newspapers of the Nation, it will gladly give up a major part of its columns to Federal promotion, free and without price, just as soon as the rest of them give their services to the Nation free and without price. Until then the editorial wastebasket yawns, and does not yawn in vain.

With highest personal regards and best wishes, my dear Carl, this country newspaper remains, as ever.

Yours sincerely,

THE CLAY COUNTY SUN,
Clay Center, Nebr.

A World Divided

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of today:

[From the Washington Times-Herald of May 12, 1941]

A WORLD DIVIDED

Sometimes we wonder whether Abraham Lincoln may not have done posterity a disservice when, in a speech delivered June 16, 1858, he said, "I believe this Government cannot endure permanently half slave and half free." He made that remark as a capper to the Biblical saying: "If a house be divided against itself, that house cannot stand" (Mark 3: 25).

What worries us is that the idea is now being applied to the world situation. Practically all administration spokesmen, from the President down, are using it as an argument for more and more United States participation in Europe's newest war.

Wendell L. Willkie, for example, put it this way at the interventionist rally in New York City a few nights ago:

"There is no compromise—the world will be dominated by free men or it will be dominated by enslaved men. We cannot appease the forces of evil * * *. Totalitarianism is a ruthless philosophy which cannot survive in a world where freedom exists."

In fewer words, "The world cannot exist half slave and half free."

The fact is that the world always has existed as a house divided.

There have been eras when all nations were slave nations; others when some were slave nations and some comparatively free and democratic nations. The United States in its short history has managed to live along in the world with various sorts of government functioning elsewhere.

We lived along with Czarist Russia, a black tyranny, for generations. President Lincoln himself, though ardently desiring democracy in his own country, was not above accepting Russian help in the Civil War, when Britain and France were helping the Confederacy.

We existed normally all the time Abdul (the Damned) Hamid II (1842–1918) as Sultan of Turkey was oppressing, robbing, massacring and torturing assorted peoples, including some of his own people. Democratic Great Britain, incidentally, kept Abdul's toehold in Europe secure because Britain didn't want Russia to get the Dardanelles.

Yet we are told now that our death knell as a nation will sound if tyranny isn't wiped out of all the world. The President, in his first message to Congress after his third inauguration, said we could and should bring to the whole world in this generation the "four freedoms"—of thought and religion, from want and fear.

The only trouble with the argument that the world cannot exist half slave and half free is that it simply is not true. It is the exact opposite of the truth.

The President is an excellent phrasemaker. We quote again an excellent set of phrases which he put together at Boston last October 30:

"And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars."

House of Representatives Is Opposed to Convoys—Some Solemn Thoughts at the Brink of War

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. LUDLOW. Mr. Speaker, we are at the brink of war. It is time for sober thinking and plain speaking. A powerful group headed by interventionists, war promoters and columnists is bringing terrific pressure to bear to get us into war through the convoy route. Congress is not reacting favorably to this pressure. I am informed that a poll has been taken of the House of Representatives which shows that if a resolution authorizing the use of convoys were voted on now it would be defeated by about 100 majority. It is on the White House that convoy pressure is beating most fiercely. The war promoters have a theory that Congress can safely be ignored and that the President can direct the use of convoys without regard to Congress. The way they are trying to force the President to take this last fatal step into war is one of the major scandals of our time. The effrontery of the pressure group stands out in bold relief when put side by side with the statement made by the President at Boston on October 30, 1940, just before the recent election. I quote from his statement made on that occasion:

> And while I am talking to you fathers and mothers I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars.

The war promoters are trying to compel the President to repudiate his solemn promise, well knowing that his word is pledged not only in that speech but in many similar speeches last year, when he assured and reassured the American people that their sons will not be sent into foreign wars.

I am receiving a heavy mail on the convoy question, in which all shades of opinion are expressed. I know of no reason why there should be any doubt of my attitude.

I made a pledge before election. In display advertisements which I inserted in all of the Indianapolis newspapers I said that I would do everything I could to keep America out of war unless our country is attacked. To my mind that was a solemn covenant. I stand today on that pledge, and I shall continue to stand on it in the future, come what may.

The President is said to have made the statement that "convoys mean shooting, and shooting means war," and with that statement I agree absolutely. My pledge being to help to keep the country out of war I could not, of course, vote for convoys, which would plunge the country into war. The issue is clean cut and unmistakable and I shall keep my promise. When I voted against the lease-lend bill I visualized exactly the situation that has now arisen. It did not require any gift of vaticination to foresee that ultimately there would be a demand for convoys to see that the goods we manufacture get to the various parts of the world. Why manufacture those goods if they are to be sent to the bottom of the ocean? is the question now raised. My answer is that I would rather see the bottom of the ocean strewn with cannon than with the bodies of our precious American boys.

I AM AN AMERICAN

I am an American. My intention and purpose is to vote as an American on all of the great issues that are burgeoning forth so numerously and so rapidly in these tragic times. If we in Congress will keep in mind what is best for our own country, to protect the integrity and the perpetuity of its matchless Government and the maintenance of its high Christian ideals, we will be doing the very best we can for humanity, for our country, and our God.

Let me outline briefly some of the cardinal features of an American policy which I think should have the loyal support of every Member of Congress, as follows:

First. To vote for national defense is an American vote. We must build up our national defense to the highest point of perfection, so that no conscienceless dictator, obsessed by fanciful dreams of world dominion, would ever dare to attack us.

Second. To vote whatever aid to Britain and the other democracies that will not weaken our home defense or entangle us in foreign wars is an American vote.

Third. To vote against any proposal whatsoever to send our American boys overseas to die in the shambles of foreign wars unless America is attacked is an American vote. Our hospitals are already full of the wrecks of human lives from the last World War. We can best serve democracy by saving our fine young men for the protection of our own shores.

Fourth. A vote against any attempts to black out the rights of labor and industry and the civil liberties of individuals is an American vote. Under the pressure of war excitement I shall never vote totalitarian measures into the law of the land.

I sincerely hope that out of the psychosis of war through which the world is now passing all of the constitutional rights of our free people may emerge unimpaired.

NATIONAL CREDIT AS IMPORTANT AS BATTALIONS

Fifth. To vote for a drastic cut in nondefense expenditures is to vote American. We are right up against the time when this matter of Government extravagance must be given consideration in order to avoid a financial debacle and the evils of printing-press money. Secretary Morgenthau talks about saving a billion dollars on nondefense appropriations but the estimates that come to Congress from the Budget Bureau are constantly for more and more money, piling debt on top of debt. We now have in sight a debt of $90,000,000,000, equal to between one-fourth and one-third of the Nation's entire wealth. One cardinal fact which should never be overlooked is that national solvency is as important to national defense as battleships and battalions. We cannot win a war with a bankrupt Treasury. We had better forget such impossible spendthrift projects as the St. Lawrence seaway, the fantastic scheme to harness the tides, and the grandiose idea of bisecting the State of Florida with a ship canal, for such drains on our Treasury would sap and weaken our financial strength to a point where it would be incapable of standing the strain of war. I applaud Secretary Morgenthau for his suggestion of a billion-dollar cut in nondefense expenditures, but I think he was too conservative. In view of the extreme urgency of bolstering our financial position I would suggest a cut of a billion and a half or two billion dollars. That would be a severe cut, indeed, and it would break the hearts of the spenders, but in the face of the gravity of the existing situation, lip service for economy means nothing and something worth while must be done.

INDIANA'S SANITY IN THE MIDST OF HYSTERIA

In this solemn hour, when war fever along the seaboards is running high and many of our citizens in those sections are thinking and acting irrationally, it seems to me, from all I see and hear, that Indiana is about the sanest spot in the Nation. Our Indiana people despise Hitlerism and all the hateful reactionary policies it stands for, but they wonder what we would be getting into if we take over and try to fight a war against three, and possibly four, of the most highly mechanized military powers of the world—a war we did not start. If I can discern their thinking processes, they are thinking of America and all it means to them, the land of homes, of freedom of speech and worship, the land of opportunities where every boy and girl has a chance to grow and bloom, and they do not want this lovely picture spoiled by any foreign entanglements. They are thinking of America, the world's most outstanding Christian and good neighbor, and they are thinking of America first.

Taxation and Spending

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

WEEKLY NEWS LETTER OF THE AMERICAN FEDERATION OF INVESTORS, APRIL 26, 1941

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks, I include the following discussion of the tax question as appearing in the Weekly News Letter of the American Federation of Investors:

LID BLOWN OFF THE TAX "JACK-IN-THE-BOX"

DEAR FELLOW INVESTORS: With open hearings begun this week before the House Ways and Means Committee, the worrying tax question exploded with reverberations throughout the Nation. Published reports of the effect of Treasury recommendations on the pocketbooks of wage earners and the devastating inroads on the salaries of the large group of business and professional men with incomes between $10,000 and $50,000 stirred millions of hitherto complacent citizens out of their comparative indifference, and brought home to them at last the inescapable truth that they will have to help pay now, in a period of national emergency, for the improvident and wasteful policies of the Federal administration during the past 8 years.

TAX EMERGENCY "NOW" DUE TO WASTEFUL SPENDING OF RECENT YEARS

The present need for imposing three and one-half billion dollars in taxes on top of an already crushing tax burden is not due primarily to our national-defense program and our vast expenditures for aid to Britain. It is due wholly to the visionary and extravagant policies of an administration bent on concentrating all political and economic power in a central bureaucracy, with the Chief Executive a virtual dictator. Under the guise of social reform, with subsidies and bribes to various groups of voting citizens, billions upon billions of dollars have been doled out in recent years, and only a fraction of these billions was raised in taxes. The balance—some twenty-five or thirty billion dollars—was borrowed.

PUBLIC MISLEAD BY FEDERAL SPENDERS

The Government's deliberate policy of deficit financing, naively referred to as "spending our way to prosperity," has resulted in a Federal debt of more than $47,000,000,000 (exclusive of about five billion additional Government-guaranteed obligations). Objectors to this ruinous program were branded by radical leaders in the administration as Tories and economic royalists, and the people were repeatedly assured that there was no danger to the United States Treasury's solvency, as we were merely "borrowing from ourselves." The people were further pacified with fairy tales about big business and rich men paying the bulk of the taxes. The abundant life was just around the corner. And so the spenders perpetuated themselves in office and in power. Now the day of reckoning is at hand.

PLACING THE BLAME WHERE IT BELONGS

Under the circumstances, the administration today occupies an unenviable position before the American people. It will not be easy to escape responsibility for having led the Nation into a financial crisis in the face of a rapidly developing foreign-relations crisis. For national defense all worth-while Americans will willingly make any sacrifices necessary, but when they review the record of this administration they cannot be fooled into believing that the financial sacrifices now demanded are due to the national-defense emergency. If our Federal financial policies had been sound these last few years and our Treasury unburdened by the heaviest debt in history, the billions now needed for defense preparedness and for aid to Britain would not have precipitated a financial crisis of such proportions as to threaten our standards of living and even our system of government.

PATRIOTIC COURAGE ESSENTIAL IN CONGRESS

But there is no denying that this Nation is in a financial mess, and that only by adopting the soundest fiscal policies can grave consequences be averted. The alternative to practically confiscatory taxes is eventual inflation that would wreck our national economy and destroy our system of free private enterprise and individual initiative. The Treasury's theory of spreading the tax burden, even until it brings the small wage earner into its scope, seems justified under the circumstances, although it is impossible at this time to pass judgment on its full program, as the details remain to be revealed It is doubtful, however, whether Congress will have the courage to spread the income tax to the extent recommended by the Treasury. Members of the House must go before the electorate every 2 years, and they just do not consider it good politics to enact legislation that takes tax dollars out of the pockets of the mass of their constituents. In this emergency, however, patriotic courage must prevail over any selfish interests.

UNNECESSARY NONDEFENSE EXPENDITURES MUST BE CUT OFF

Until Congress manifests an interest in cutting out unnecessary nondefense expenditures, it cannot face the taxpayers—and voters—with clean hands. Members who vote additional taxes, and at the same time condone the squandering of Federal funds on unessential projects or subsidies, deserve repudiation at the hands of their constituents. Secretary Morgenthau, appearing Thursday before the House Ways and Means Committee, suggested that at least $1,000,000,000 could be cut from nondefense expenditures. Everyone familiar with the fiscal affairs of the Government knows that Mr. Morgenthau's estimate of possible savings (without sacrificing the relief or old-age programs) is conservative. In fact, Congress could reduce ordinary expenditures by at least $2,000,000,000 a year, thus relieving the pressure on taxpayers and at the same time expediting the defense program.

Mrs. Roosevelt Mistaken

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

EDITORIAL FROM THE HOLLAND (MICH.) EVENING SENTINEL

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Holland (Mich.) Evening Sentinel of May 10, 1941:

[From the Holland (Mich.) Evening Sentinel of May 10, 1941]

MRS. ROOSEVELT MISTAKEN

In Los Angeles a member of Mrs. Roosevelt's audience asked the question: "Do you think the President will keep his promise and keep us out of war?" The First Lady's answer was: "He hasn't made any such promise."

Now, that is about the most remarkable remark that has been made in a whole year of remarkable remarks. Regardless of whether the United States should go to war or not, fact remains fact and a matter of record remains a matter of record. If Mrs. Roosevelt is correct in her remarkable statement, then millions of normal Americans are mistaken. For millions of Americans (among them probably many of those who read this editorial) are ready to swear that they heard the President promise just that, with their own ears. Are we then mistaken for believing the testimony of our ears as over against the casuistry of the President's wife?

In one of the last speeches of the campaign last November this is what President Roosevelt said—millions heard it over the radio, and some of them copied the words down on the spot because of an instinctive feeling that they might be repudiated or ignored after the election. Here are the words, a matter of record:

"Your President says this country is not going to war."

If a promise to keep the Nation out of war can be made more positively and unequivocally than that, how must it be worded? The issue at the moment is not whether going to war is the right policy or not, it is merely the issue of who is mistaken. Are the American people to lie down humbly and let themselves be stepped on? It is a question of who is right, and the humblest citizen has as much right to demand respect for the evidence of his own ears as has the most exalted lady in the land.

The First Lady says: "He hasn't made any such promise." Then what do the President's words, "Your President says this country is not going to war," mean? Or don't they mean anything? Or were they mere campaign fodder? Did the President suppose that they would be forgotten as soon as the election was in the bag?

Mother's Day

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ADDRESS BY HON. RAYMOND S. SPRINGER, OF INDIANA

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address made by my colleague, Hon. RAYMOND S. SPRINGER, of Indiana, in the Amphitheater, at the Tomb of the Unknown Soldier, at Arlington Cemetery, on Mother's Day, May 11, 1941. His address follows:

Madam National President of the American War Mothers, distinguished guests, it is

a happy privilege to address every war mother, and every mother, everywhere, in this hour of universal sacrifice in our Nation. This is a beautiful occasion. Communing with us are many mothers from many American republics in the Western Hemisphere. It is a most happy privilege to greet the mothers today. This is your day—Mothers' Day!

We meet within the shadow of this tomb, and the sacredness of this spot reflects the solace and the beauty of peace. We are sheltered by the dome of heaven, temporarily safe from the destructive forces from without. The last resting place of our unknown soldier—known but to God—marks the place of our communion. This unknown son, of an unknown mother, sleeps while the war-torn world shudders before the threat and the mental distress of another conflict. For him all wars have ended. He sleeps in yon sarcophagus where kings and queens, men and women—the common people of nations—do him honor. May he rest in peace!

In the spirit of Mothers' Day we reflect upon both the beauty and the pathos of that annual event in our national life. Many may express their joy and pride because their mother is still with them. She is the guiding star of the destiny of men. For many of us mother is a hallowed memory. Her hands touch us only in our dreams. Blessed are those that still have the benediction of the fading eyes and the caress of her trembling lips: For our mother's love is the nearest approach to divine love that God grants to men. In our fervent memory of her we witness the gathered tears—for mother.

The very name signifies all that is sacred, all that is loyal, all that is sincere, all that is honorable. Her universal kindness throughout the years causes us to kneel at the shrine of sacred memories, where we honor her—mother.

When we speak the name there is that something which is eternal and immortal, that which inspires. They have been the torch bearers, they have blazed the trail, and no race has risen above the exalted ideals of its mothers.

Today we pause and reflect, because we recognize that the finest sentiment in life is woven about the home. The keystone of the home is mother. It is my firm belief that of all the sentiments which cling to the end of life and touch with mellowness the memories of the early years as they recede, the finest is the one enshrining mother. To pay a tribute to them is but to recognize the most unselfish emotion to which the human soul is capable.

Her love is more than instinct. It continues as long as life endures. Her fervent love for her child is the greatest force in the world today, because it endures through time, it is stronger than disaster, deeper than eternity, and remains imperishable before the storms and vicissitudes of life.

Mother.

The very mention of her name promotes a stern realization that she is the foundation of civilization because she has inspired achievement and established goodness; she has enriched and ennobled the souls of men and nations. She is the one ideal that remains after every other has been banished by disillusionment. There is no force which can destroy that picture of her protection or the memory of her prayers.

We speak of her again:

Mother.

There can be no higher privilege today than to offer thanks to that Divinity who so planned the universe as to give mothers to men. This tribute is universal. This day is dedicated to motherhood. For a mother's love there is no substitute. This thought has been so beautifully expressed in these words of tribute: "If there be truth in religion, then this holy sentiment was planted in woman's heart by the hand of God. It has made life possible. It is in truth the very source of life itself. When all other passions are dead it survives. It will pass through the furnace of disgrace and yet live. It will endure the scorching breath of contumely with unwavering fidelity." The spirit of this day makes ours a nobler Nation. The songs and poems inspired by love we hear, the eloquent sermons delivered in eulogy of mother; the flowers we wear in honor of her, the planting of trees in her memory, the unfurling of our flags—all these are our tribute and the expression of our fervent thoughts as we honor and revere our mothers. These are the symbols of our love and devotion—our humble, yet solemn, rededication of our faith in mother.

These are ominous days in our country. The souls of men are sorely tried. While we meet in this atmosphere of calm and sober reflection we are conscious that we are yet spared from assaults coming from without. We can express our thanks unto God that the Western Hemisphere remains at peace. May it ever be so. We shudder as we know the Eastern Hemisphere is aflame with war; that death, destruction, and devastation may be found on every hand and where weeping mothers pray that this tragic war may soon be ended; yet the war lords continue to pursue their daily task of war and death. The curse of mastery, the unalterable desire of acquisition, and the unthinkable purpose of satisfying a selfish desire—all of these elements, spurred on by the lash of personal domination and individual dictation, cause this cruel war to continue.

As we witness these sad and very serious days we realize that nations have been invaded and that men have fallen. The destiny of those nations is yet unknown, and their future is dark. The demands upon those people is yet in secret contemplation. What tomorrow will bring to their untold suffering we do not know. The future is shrouded in mystery.

There are other people in Europe whose outstanding bravery stands as a shining example of their faith to all other nations. They are yet holding fast. Our prayers go forth unto God that they may be victorious. The nightly raids of bombing planes, which come with the certainty of the darkness, do not deter them in their defense. Fathers, mothers, and children, with a morale as firm as if made of bands of steel, face each rising sun with a prayer upon their lips that "the war will soon end and their country may be saved."

What a tragedy to behold. Their country—their native land—may be destroyed or taken. Their homes may be lost. Their lives are in the balance. They face the untold cruelty of war and the ravages of the dictator who seeks to dominate. The anguish of those mothers today certainly exceeds all human comprehension. I know their prayers are constant and fervent. They embrace the song and sentiment of life.

Thus we view the present. The mothers over there have met the crisis with an unfaltering trust and with an indomitable faith. They are steadfast in their belief that an all-wise God will direct the cause of right and victory.

The wisdom of the guiding hand of mother will lead aright the stalwart men of the Americas. Before us are the myriad thoughts of our mothers humbly beseeching the God of men to restore to the world a universal peace. They pray that the destructive forces of nations may be transformed into constructive forces for good. They would that the savagery of those who seek to conquer other nations, that a new philosophy of life may be designed throughout the world, may be quickly changed into the promotion of peace. The creed of our mothers, inspired by the goodness of their souls, now carved in matchless script upon that tablet which endures throughout the endless space of time, speaks to us: "Let us have peace."

They know the path which leads to war is a false path to liberty and freedom. Our mothers, with their enduring affection, revere our liberty and freedom. These they would perpetuate. In this presence of peace and in the exalted presence of our mothers, in the shadow of the tomb of him who gave his life that liberty and freedom may prevail in our country and that our American way of life may forever continue in paths of unmolested peace, may we offer our prayers, with the fervency of our mothers, that this war may soon end and that peace may prevail throughout the world.

Throughout the Western Hemisphere our mothers are united. Their fondest hopes, their exalted desires, and their earnest prayers are entirely kindred. They pray alone, yet their utterances express the same desire. They sing "God Bless America" with the same fervent wish and the same high hope. The mothers' love and the mothers' prayers claim the same exacting influence, because they hope for peace in the Western Hemisphere. Their boys, and our boys, face the same threat in a world which is shadowed by war. The loss of opportunity to children is identical, one with the other. The fate of the one is the common fate of all. Today, the mothers of the pan-American countries meet here—meet with our mothers—they meet with the common aspiration and purpose that a universal peace may forever reign throughout the Western Hemisphere. May this sacred bond of human friendship, which now exists among all mothers in the Americas, become more closely fixed and more completely consolidated as the years roll by. The threat of war brings us closer as a people. Adversity establishes a common level for all. The love of all mothers for those finer and better elements of life constitute a stabilizing influence for the common good.

We cannot pass this hour without reflection upon the valor and the fortitude of our war mothers. They have stood the test of human suffering, yet their faith has remained untarnished. When the lowering clouds of grim and determined war came—when their sons responded to their countries' call—they met the crisis with an undoubted response of unalterable faith in God. Yes, their tears were shed—they were shed when they were alone—alone with God! They have never doubted, even when the path was rugged, that the endless destruction of human life would not long continue. They witnessed the consummation of their unerring faith when the war was over. Our war mothers have ever been happy to live in the paths of peace; their mission throughout the years has been to establish a lasting peace—an enduring peace. Their exalted influence in the Americas has materially aided in the development of that sturdy patriotism which is undimmed by time. They have builded so well in our nations. We place at their feet that perpetual wreath of love and sweet memories.

As we contemplate the sacred influence of this day may I say that it is quite unusual that in all history no nation had united to honor its mothers until our own country held its first Nation-wide tribute to our mothers on May 10, 1925. In passing may I pay a tribute to the Honorable Frank E. Hering, of Indiana, teacher, orator, and humanitarian, who made the first plea for a Nation-wide observance of Mother's Day. To him our Nation owes a debt of gratitude.

Then comes the tomorrow. No one can contemplate what it will bring. We will meet it. We will never falter. The war mothers of our Nation, our mothers throughout this hemisphere, will continue their earthly work. Their voices will be heard and we will witness their smiles as their inspiring counsel comes to us. In these days of human trials, when strong men need earthly

and heavenly guidance, and when it seems that we falter when we face our task, the cheery word of inspiration from our mothers sends us forward, undaunted, to meet the future. Whatever it may be, we will face it with the victor's smile guided by that eternal light emanating from the golden voice of mother.

We are inspired by our mother's love, because it has produced, fondled, reared, inspired, and glorified all of the shadowy hosts who have passed across the "mark of time" since man first raised his eyes to heaven. The word "mother" is, indeed, that golden cord which binds the earth to God.

War mothers of our Nation, you have served so well. Your inspiration ever guides our steps aright. While we linger in your presence, as we solemnly meditate in the sacred memory of our mothers, both living and dead—yet, with uncovered heads we stand in the presence of the Tomb of the Unknown Soldier, which inspires our unalterable course: You speak—a grateful Nation listens.

We speak her name again, Mother!
And we know,
"Behind the dim unknown
Standeth God, within the shadow,
Keeping watch above His own!"

Livestock and National Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

ADDRESS BY G. B. THORNE, OF WILSON & CO., CHICAGO, ILL.

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by G. B. Thorne, of Wilson & Co., Chicago, at Livestock Feeders' Day, University of Missouri, Columbia, Mo., April 10, 1941:

The subject I have been asked to talk about today is, Livestock and National Defense. While I have considerable misgivings as to my ability to handle this subject, it is an appropriate one, for it would be difficult indeed to talk about the livestock business from the market standpoint at the present time without giving considerable attention to the effects of the war and the national-defense program.

The national program of preparedness and aid to Britain is affecting the economic life of the entire Nation. Even though our country is not at war, we are rapidly approaching a war economy. Each week our Government is taking additional steps in governing the production, marketing, and prices of commodities in order to remove bottlenecks and greatly step up production of war materials.

Whether you are concerned with the market for livestock or with the market for any other commodity, new factors must now be taken into account which until recently were of no importance or nonexistent. These developments are occurring so rapidly that it is difficult to keep abreast with what has happened, to say nothing of the extremely difficult task of trying to foresee what is ahead.

This great national effort is affecting the livestock and meat industry in many ways. However, I shall confine my discussion largely to three major influences.

First, and perhaps the most important, is the effect of the national-defense effort upon the domestic demand for meats. One of the basic economic principles in the livestock industry is that the demand for meat is governed by the ability of consumers to buy the product. Consumers normally spend around 5 percent of their income for the purchase of meats. This means that when industrial activity and employment increase there is a corresponding increase in the demand for meat. Industrial activity has increased sharply during the past year and especially in recent months. Production of industrial goods is now at the highest level on record. Industrial employment has increased by more than 2,000,000 persons in the last year, and this does not take into account the increase in the armed forces. This gain in employment is not surprising when we realize that there have been authorized or are pending, national-defense contracts amounting to $45,000,000,000. Only about one-eighth of this huge total has been completed.

We already have seen considerable improvement in the demand for meats as a result of increased employment. To illustrate, the price of beef steers at Chicago now averages about $2 higher than a year ago in the face of larger slaughter supplies. The explanation is greater consumer buying power as a result of increased employment.

As more people are put to work, a further increase in domestic demand for meats may be expected.

It looks now as though it will be increasingly difficult for consumers to obtain durable goods, such as automobiles, washing machines, refrigerators, and similar articles, because of a diversion of raw materials and plant facilities from the manufacturing of these products to the production of war equipment. Thus not only will people have more total money to spend but they also probably will be willing to spend a larger share of it for foods.

Another important factor is the increased demand for meat products for the armed forces. Prior to the present program of expansion, the United States Army included only 187,000 men. In contrast to this, the War Department expects to have about 1,400,000 men in Army camps by June 15. The Navy also is expanding, although not to the same extent.

For a long time the United States has had a reputation of having the best-fed army in the world. This, of course, calls for liberal rations of meat. The office of the Surgeon General of the Army announced recently that our soldiers eat meat at the rate of more than 300 pounds per man per year. This compares with the present civilian per capita consumption of about 141 pounds. These figures are not strictly comparable, however, since the average of 141 pounds per capita for the country as a whole is an average for all persons of all ages, including infants. Nevertheless, it is safe to say that the average soldier eats considerably more meat than he would eat in normal civilian life. As a general rule, the soldier gets meat at 17 of his 21 weekly meals and liberal portions are served. In planning the diet for soldiers meat is considered to be of prime importance not only because they like it and it sticks to the ribs, but because it contains so many essential elements for the well-balanced diet including proteins, vitamins, and minerals.

The Army is buying all classes of meat, beef, veal, pork, and lamb. In buying its meats from month to month the Army plans to give greatest emphasis in its buying to those meats which are in relatively greatest supply. In this way, Army purchases should serve as a stabilizing influence on livestock markets and also provide the Army with meats at the most reasonable cost.

Beef constitutes a large share of the Army meat ration. The bulk of the beef bought by the Army is from cattle that grade medium and low good, according to the United States Government grading standards. These are cattle that, as a rule, at this time of year would have a limited feeding of grain. During the summer and fall it would include some of the grass cattle. This beef is somewhat above the average quality of beef consumed in the United States. While the majority of the Army beef is bought in carcass form, some beef cuts are purchased, principally rounds and chucks. The minimum carcass weight is 450 pounds, which is equivalent to 800 to 850 pounds, live weight, but the Army's preference is for heavy carcasses. Purchases are confined to steer beef except when boneless frozen beef is bought, in which case heifer beef of proper quality also is acceptable. The Army expects to use large quantities of the boneless frozen beef in connection with their field maneuvers.

The bulk of the Army demand for pork products is for bacon, hams, and loins. Army officials have indicated that they intend to buy a considerable quantity of spiced pork, packed in cans. This product will keep indefinitely without refrigeration and is made mostly from pork-shoulder meat.

Upon investigation we found that vegetable shortening was being used almost entirely by the Army for frying and baking and practically no lard was being used. However, Army officials have indicated a willingness to use more lard in the future. The National Livestock and Meat Board in cooperation with the packers is making an intensive survey of the Army's shortening requirements, in order that specifications may be prepared that will assure the Army of getting the kind and quality of lard that will meet its needs. The meat board also will cooperate closely with the Army by furnishing the camps and the Army's bakers' and cooks' schools with educational material on the proper use of lard and its superior qualities as a shortening. Lt. Col. Paul Logan, in charge of subsistence of the Army, and his associates are giving the livestock and meat industry excellent cooperation in matters of this kind. In turn, Mr. Pollock of the National Livestock and Meat Board, is giving the full time of his entire merchandising staff to the job of helping the Army train its cooks and their personnel in the proper handling, cutting, and cooking of meats and approved methods of using lard.

Supplying meats to the Army on such an expanded scale is a vast undertaking. We feel that it is of great importance to the livestock industry that the job be done efficiently and with maximum satisfaction to the armed forces. The importance of this job is one of the reasons why the meat-packing industry ranks high among the essential industries in the defense program, and we are leaving no stones unturned to satisfy the Army's requirements for meats in every way.

The third important influence of the war and the national-defense program on the livestock industry is its effect on the export demand for meats. One of the first effects of the war was to further curtail the exports of meat products which already were at a low level. Great Britain established what practically amounted to an embargo on pork and lard from the United States in the early part of 1940. This was done primarily to conserve dollar exchange for the purchase of war munitions. Large quantities of beef were available in Argentina at low prices, and with the enforcement of a rigid rationing system it was the view of the British Government that adequate pork supplies could be obtained from Denmark, Canada, and from home production. The supply from Denmark, of course, was shut off when that country was taken over by Germany. This still did not prove too serious to Great Britain from the standpoint of pork, since hog supplies had been greatly increased in Canada, and

a program for further expansion of Canadian hog production was under way. However, in more recent months with British production decreasing because of the lack of feed, and with losses due to bombings and to the sinking of ships in transit, meat supplies in Great Britain apparently have been much smaller than desired and reserve stocks are low.

When it became evident that the lease-lend bill would be enacted into law, giving aid to Britain by supplying all types of essential materials, the British Government indicated to our Government that substantial quantities of food were greatly needed. Consequently, our Government is making plans to supply the British with large quantities of food products under the Lease-Lend Act, and a considerable share of the food to be furnished apparently will be pork and lard. The purchases are to be made by the United States Department of Agriculture. The Department already has purchased, since the middle of March, forty-six and one-half million pounds of lard and six and one-half million pounds of pork for this purpose. The British Government has indicated an interest in obtaining a liberal supply of sterile, nonperishable pork meat in cans. This apparently is needed to hold in reserve for emergencies, when because of bombings or sinking of ships, the regular flow of perishable meats is seriously disrupted.

It is apparent, therefore, that three major influences, namely, increased employment in this country, increased meat requirements for the Army, and larger quantities needed for shipping abroad all point to a further substantial improvement in the demand for meat products during the remainder of the year if the war continues. Furthermore, it is likely that these factors will cause the improved demand to be well maintained for the duration of the war and of our national-defense activity.

Now let us look at the supply side of the market. The cattle population of the United States has been increasing steadily since 1938. The greatest yearly increase was in 1940 when cattle numbers increased nearly 3,000,000 head, bringing the national total to 71,666,000 head.

Missouri has shared in this expansion in cattle production. Numbers on farms in Missouri the first of the year were the largest in 23 years. Present indications are that farmers are continuing to hold back breeding stock, and it is very likely that by the first of next year the cattle population of the United States will be at or near the highest level on record as established in 1934. This expansion, which got under way in 1938, is just now beginning to be reflected in market supplies. Inspected cattle slaughter so far this year has been running larger than a year earlier, and there are more cattle on feed than a year ago.

Sheep production in the United States has not changed greatly during the last 10 years although there has been a slight upward trend since 1935. The number of stock sheep and lambs on farms on January 1 was 2 percent larger than a year earlier, and market supplies of sheep and lambs in 1941 probably will be a little larger than in the previous year.

Hog slaughter last year reached normal levels for the first time since before the droughts, but due to an unfavorable hog-corn ratio the pig crop of 1940 was reduced. Indications are that the spring pig crop this year also will be somewhat under the spring crop of 1940. Hog slaughter during the remainder of the year, therefore, is expected to be somewhat under last year.

Since the first of the year, however, the hog-corn ratio has been favorable, which, no doubt, has caused producers to make plans for expanding their breeding operations. A further decided stimulus to expanded hog production occurred last week when the Secretary of Agriculture announced that the Government will make purchases of pork products in the open market to support a long-term price for hogs of $9 per hundredweight (Chicago basis). It was announced that in pursuing this policy seasonal price variations would be taken into account, and the prices would be subject to customary market differentials for market grades and qualities. The Secretary stated that the policy of supporting prices at levels remunerative to producers will be extended over the period to June 30, 1943. The apparent purpose of this Government action was to give producers sufficient price assurance to cause them to step up production promptly, and thereby more adequately provide for the rapidly growing demand at home and abroad. The Department of Agriculture also has indicated that the reserve supplies of pork products that they intend to buy and accumulate also may be used to prevent excessive speculative price increases by releasing supplies to the domestic trade if prices get to unwarranted levels. Thus it is the intention of the Government to use their pork- and lard-buying operations not only to support prices up to a certain level but also to give stability to the market.

It is certainly important to national defense and the program to aid Britain as well as to the livestock industry that prices be maintained at levels that will be remunerative to producers and will encourage production. But it is equally important that we avoid if possible the experiences of the last war when prices of livestock and other commodities skyrocketed to unreasonable levels. The announcement made by Secretary Wickard last week that purchases of meats and lard for Britain and other nations resisting aggression would be used, not only to support prices, but to help stabilize them, should go a long way toward bringing about the desired objective.

The large numbers of cattle and sheep on farms and ranches in the United States and the abundant supplies of feed that are on hand place the livestock industry in a good position to supply the increasing requirements for meat at home and abroad. Hog supplies can, and no doubt will, be expanded materially within a short time. The industry, therefore, is well prepared to do its share for national defense.

I am sure livestock producers also are doing a lot of serious thinking these days about the problems that may confront the industry after the war is ended. This no doubt is especially true of those who underwent the hardships following the last World War. Meeting present emergencies is the first order of business, but it is not too early to think about and plan for what may be ahead.

There is a distinct possibility that following the war, especially if Britain wins, large supplies of meat from the United States may be needed in Great Britain and in Europe until such time as the livestock industry in those countries can be rehabilitated. Nevertheless, based on our past experience, it would be most unwise for us to assume that the wartime demand for meat will continue indefinitely after the war is over. Some major adjustments are inevitable.

One of the best safeguards we can take against severe post-war adjustments is not to neglect our domestic market during the period of the emergency. During the last war very little attention was given to this problem, and we suffered the consequences during the post-war period. The promotion of meat substitutes and the inauguration of meatless days during that period developed consumer resistance against meat which, even to this day, probably has not been completely overcome. This time the industry is in a position to supply adequate meats for all requirements and such harsh measures should not be necessary. Instead we should continue to tell the American public the virtues of meat and its importance in a well-balanced diet.

There is an urgent need, both from the producers' and consumers' standpoint, for greater consumption of meat in the United States. It is needed from the producers' standpoint because of the increasing abundance of feed crops in all sections of the country, which can only be marketed through livestock. It is needed from the consumer standpoint in order to improve the health and vigor of our people. Scientific facts are now available which show that many of the human ailments are due to deficiencies in the diet, and meat is one of man's most valuable foods from the nutritional standpoint.

People eat meat because they like it and because it satisfies them, but they do not always attach the rightful importance to meat as an essential part of the diet. Meat does not rank as high as it should in the public mind as an important source of vitamins, and consumers consider its protein content as unimportant. There are still many people who think that meat is not good for them, that it is hard to digest, that it is fattening, and is the cause of many diseases.

In contrast to these consumer beliefs, there is scientific evidence to show that meat ranks high in vitamins, especially in the so-called B vitamins, which we hear so much about these days. We know that meat is not hard to digest, that it can be used either as a reducing or a gaining diet, and that it is unexcelled as a source of essential proteins.

We in the meat industry are convinced that the domestic market for meats can be greatly expanded through a continuous program of consumer education, such as the one under way. It fits in well with the present program of national defense, an important part of which is to improve the health and vigor of the American people.

A Mother's Appeal

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter which I have received this morning, and which I am pleased to entitle "A Mother's Appeal." I shall not elaborate on the text of the letter, except to observe that it is the heartfelt plea of an American mother whose sentiments are indicative of the feelings of countless millions of mothers in this great Nation of ours. I urge that each of my colleagues direct their attention to this message:

MAY 8, 1941.

Hon. BEN F. JENSEN,
Member of Congress, Washington, D. C.

DEAR SIR: This letter is in regard to this country's entering the war.

My sentiment is this: If our Congressmen and Representatives give in to put this country into another war which is not our war, I think it is high time we have a different form of government.

I want to inform you of the feeling of the people in this neighborhood. Some

are talking of getting up petitions to impeach the President, and telling our boys to rebel and not be sent across the waters. So you see revolution could be started very easy if this country enters that war. It is nobody's fault but you fellows sitting down there in Washington, D. C., supposing to be representing the people.

It does seem that us mothers are not given much consideration only when you want our votes.

I have raised my son up to be a perfect picture of manhood and to be a law-abiding citizen. I have sat at his sick bed many, many nights and prayed to God that his life might be spared, and now you have him in Camp Claiborne, La., preparing to go out to war to be shot down like a rat or to shoot some other poor mother's son; someone that if we were to meet him on the street anytime but wartime would greet him with a smile.

I pray that all you white-collared fellows in Washington would pick up your Bibles and be more concerned in what it contains than being so concerned in another man's war. We are promised a hell of brimstone and fire in the hereafter for man's deceitfulness and unjustness.

Men do not know what us mothers do sacrifice to keep up the race. I hope, Mr. Jensen, you take no offense at this letter and that you will use all the prestige you have on this matter.

Mr. Speaker, in answer to this letter I sent this typical American mother the following poem, which I composed last week and which I read into the RECORD of May 6, the words of which express my innermost feelings:

RIGHT MAKES MIGHT

Give us men today, oh Saviour,
Men who dare to do the right.
In this world of war-torn nations,
Pity those who make man fight.

If there be such ones among us,
Give them courage to turn back,
While the heavenly gods yet bless them,
Holding off that shroud of black.

Let them not from others pattern.
God is good, He made the sea!
Then he blessed us with America,
Where he willed we should be free.

Dare you then to other peoples
Dictate what they all must be?
Cross that ocean? Slay your brethren?
Who have not been blessed like thee?

Nay! I hear my comrades calling,
Send them bread to stop that fight.
Trusting God to save the peoples,
Who would learn that right makes might.

—Ben Franklin Jensen.

A Scheme to Nationalize Agriculture

EXTENSION OF REMARKS

OF

HON. PHILIP A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. BENNETT. Mr. Speaker, I desire to call attention of Members of the House to a plan now being pushed by a group here in Washington to nationalize agriculture. This group appears to be violating provisions of the Hatch Act in its determination to regiment the farmers of America.

In this connection I desire to quote a letter which I received recently from Mr. F. V. Heinkel, president of the Missouri Farmers' Association:

MISSOURI FARMERS ASSOCIATION, INC.,
COLUMBIA, MO., *May 9, 1941.*

Hon. PHIL BENNETT,
House Office Building, Washington, D. C.

DEAR MR. BENNETT: In the belief that owing to the stress of the times in Washington you may not have had opportunity to acquaint yourself with the flagrant attempt of the Soil Conservation Service to foist upon an unwilling agriculture of Missouri the State soil conservation districts plan, I am taking the liberty to write you about it; also, in the name of the organized farmers of this State, as well as the thousands more who will have no opportunity to be heard on the subject, to register with you a vigorous protest.

You will doubtless recall that in 1936, at the behest of the Secretary of Agriculture, the standard State soil conservation districts law, identified at Jefferson City as S. B. 170, was defeated by the State legislature because of its obnoxious features and bald objectives, and this despite the fact that an attorney came out from Washington to put it over.

In 1938 it was introduced as H. B. 156, though in slightly modified form, and was again defeated. Not long ago it was introduced in this session of the State legislature as H. B. 289, and was killed in committee on the grounds that Missouri is already doing a better job of conserving the soil than any other State, and, therefore, such a law would be "superfluous and an added expense." A few days ago, in the same session of the legislature, "the cat came back" as H. B. 565—but this time employees of the Soil Conservation Service had gone about over the State and rounded up some 150 farmers in 25 counties to testify in favor of the bill before the House committee, and the bill was reported out.

We are prompted to inquire: Why this persistence? Does the Hatch Act apply to employees of the Soil Conservation Service, one of whom spent many days lobbying for the State soil-districts bill at Jefferson City? Since Missouri is already doing a better job of conserving the soil than any other State in the Union, with eight of its fifteen million crop acres planted to legumes, why center all of this fire on us here in Missouri?

Nowhere in the country do farmers more strongly believe in soil conservation than in Missouri, and certainly this is true of members of the Missouri Farmers' Association. We cite these figures as proof: In 1940 Missouri farmers used 87,000 tons of phosphate fertilizer, spread 1,381,774 tons of lime, used mechanical control measures on 450,000 acres of land, and, as mentioned, grew 8,000,000 acres of legumes! This fine record was accomplished through the cooperation of farmers, voluntarily, with the Extension Department and other governmental agencies. Moreover, according to the Soil Conservation Service, Missouri has built more reservoirs than any State west of Pennsylvania except California, where water is used for irrigation purposes. In addition, we are making rapid strides in wildlife conservation through our own State agency, of which we are very proud. No other State, we maintain, can boast of such a record.

We contend that 90 percent of Missouri farmers do not want the State soil-conservation districts law. Were this not true, would the State legislature have turned it down three times in succession? We charge that three interests want this law passed in Missouri. They are:

First and foremost, the hired technicians of the Soil Conservation Service. They want it in order to hold their jobs, and as a pressure group to demand more money from Congress so that the power of this new Federal Bureau, the Soil Conservation Service, can be enhanced. This Bureau has already pressured Congress into appropriating $5,000,000 more with which to hire more technicians for these districts, and this at a time when the war situation calls for billions more in taxes, and when agriculture is selling products at less than cost of production. These officials and employees of this Bureau are bending every effort to foist this act upon the people of this State, and this in the face of the Hatch Act.

Second, in support of this bill are various local chambers of commerce, such as the one at Bethany. They ostensibly expect to get the business of a new flock of Federal payroll riders.

The third group is constituted by a small number of farmers who have enjoyed the privilege of having their land terraced at public expense, of having brush cut and fences built by C. C. C. boys who are now needed for the Nation's defense. Some of these farmers and a few others who have witnessed such operations are inclined to seek further assistance along this line. However, the facts are they will not receive such assistance under the districts law as the Federal funds are intended for payment of salaries of technicians.

The real directing hand, of course, is located in Washington, D. C. Certain people there apparently intend to use this new vehicle as a means of nationalizing agriculture when the war ends. They propose to direct from Washington every move that farmers make when the A. A. A. and its dole are made impossible by our post-war-straitened circumstances, and with our colleges of agriculture relegated to pure research activities. These are the charges we make of this undemocratic proposal, and we hold that this must account for the persistence behind it, since it is a fact that Missouri already excels all other States in soil conservation.

As proof of our contention that this is a bold intent to nationalize agriculture, your attention is respectfully directed to a very recent publication relative to State legislation for better land use, which is a special report by an interbureau committee of the United States Department of Agriculture. Chapter 111, page 36, reads, in part: "Practically all land in particular watersheds must be brought under uniform control. Arbitrary boundary lines should be ignored and programs formulated over naturally bounded areas."

This means that eventually every farmer will have to comply with ordinances passed by soil districts committees whether he wants to or not, with all lines, such as county and boundary lines of the farm, superseded by new district lines. The same special report states, "Machinery should be provided whereby a majority of the farmers can * * * compel a minority to comply."

In other words, according to the statement of the Soil Conservation Service itself, this latest proposed law, like its three predecessors that were killed at Jefferson City, is simply to prepare a way for an amended law that will compel all farmers within a given district to handle their land the way they are told to do it from Washington, or to have the work done on their farm and charged against them and stand as a lien against their land with provisions to sell that farm if need be to meet the costs. These provisions were set forth in the original standard law which was proposed in 1936, and are still in the minds of the Soil Conservation Service officials at this time, as witness their report issued within the past 30 days.

We do not believe that, understanding the situation, you will approve of the undemocratic intent behind the State soil-conservation districts law; nor of the use of Soil Conservation Service officials and employees in

creating a demand for such a law in Missouri, where the pace in soil conservation has been set for all other States. We see in this program most sinister possibilities, and want you to know that we of the Missouri Farmers' Association most heartily disapprove of them.

Sincerely yours,

P. V. HEINKEL,
President, Missouri Farmers' Association.

Mr. Speaker, the Missouri Farmers' Association is one of the strongest, most helpful, and best managed farm organizations in the Nation. I hope that the House will pay some heed to the statements made by Mr. Heinkel and that the Justice Department will look into alleged violations of the Hatch Act.

Under pretense of helping the farmers, many foolish and expensive things are being done. Billions of dollars have been spent by the "hot-dog" boys, and in spite of this, the plight of our farmers is worse today than it was in that terrible year of 1932.

As an example of waste and mismanagement, I quote from an article by Pearson and Allen, in the Washington Times-Herald of April 20, 1941:

MARYLAND MERRY-GO-ROUND

(By Drew Pearson and Robert S. Allen)

SOIL "CONSERVATION"

If Federal investigators really go into the Soil Conservation Service in Washington County, they will find plenty of things to worry about. How some of the inefficiencies have escaped the attention of Washington thus far is hard to understand.

For instance, Ed Conklin, a farmer not far from Hagerstown, owns about 70 acres with a value of around $3,000. Ed signed up for the Government's conservation program on his farm, and before the Government finished, it had spent around $6,000 on Ed's $3,000 acreage.

The job of terracing Conklin's acres was supervised by C. A. Frye, who is now chief engineer of the northeastern region. All during the winters of 1935 and 1936, C. C. C. labor crews hauled dirt to patch up the terraces, but the terraces did not hold. Finally, the trouble was corrected by the efforts of two low-ranking technicians.

But, in the end, Ed Conklin decided that terracing his farm was not particularly good for conservation, and 3 years later the terraces were entirely plowed down and obliterated. It has been said that a doctor's mistakes are buried, but an engineer's mistakes become a monument to his ignorance. Fortunately for the Soil Conservation Service this particular monument has been destroyed by Ed Conklin's plow.

FARMING BY THEORY

Another Washington County farmer is Don Easterday, who had about 24 acres treated for soil erosion at a cost of about $2,700 to the Government and a cost of about $80 to him. Then there is also the case of Frank Mullendore who had 22 acres treated by the Government at a cost of $3,800 to the Government and about $60 to him.

Chief result of soil conservation tactics in this area has been a complete loss of public confidence. This is partly due to the rather high-handed tactics of various soil administration officials. Instead of attempting to apply methods which would fit the local picture, officials apparently tried to fit the local situation into their own preconceived ideas on theoretical farming. Sources of local information, such as the county agricultural agent and local farm organizations, were ignored.

When some of the officials from Washington were looking into the situation last winter they were astounded at the utter lack of supervision and inspection done by line officials. In other words, the men who met the public as representatives of the Soil Conservation Service had practically no guidance from superiors, and the superiors knew nothing of the progress or lack of it in the field.

Principal measurement of accomplishment was the number of agreements signed with farmers to carry on soil-conservation practices. Emphasis was on the large number of agreements signed, and there was little or no effort to learn what these documents involved. This looseness of supervision and inspection within the organization may explain why people voted "thumbs down" on some proposed soil-conservation districts in several neighboring States in the northeastern region, including Pennsylvania, headquarters of regional chief mogul, John P. Jones.

BUREAU ILL WILL

A few of the men in the ranks of the service are struggling to maintain good public relations and render public service, but they are finding the back drag of administrative inefficiency a serious handicap. Some of the field technicians welcome constructive suggestions from supervisors with a practical conception of farming, but they have little regard for the impractical puppets of the various Soil Conservation offices.

Another difficulty with the Service is jealousy against subordinate officials who make good. For instance, one of the employees of the Hagerstown Soil Conservation Service project, J. C. Tignor, was furloughed because he was given a low efficiency rating. This man's immediate superior, B. D. Gilbert, area conservationist, who made the rating, refused to discuss with Tignor the reasons for this low rating, and he was furloughed.

Tignor's associates claim that he had an excellent record and was one of the most capable men ever stationed at the Hagerstown office.

Mr. Speaker, if the administration will quit importing competitive farm products, reduce the interest rate on farm loans to 3½ percent, cease coddling those groups that add so much to the cost of everything the farmer buys, and then leave the farmer alone he will get out of the red much sooner than the New Deal does. One trouble is a major part of funds appropriated in the name of agriculture are paid out to a few big operators and corporations. Such payments might well be limited to $1,000 to any one individual, and restricted to those who make their living by cultivating the soil.

In Missouri we have been doing a fine job of soil conservation through our agricultural college and county agents. We do not want dictation from Washington. We are opposed to regimentation—we want to preserve freedom in America.

National Defense Instructors Association of Buffalo

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL DEFENSE INSTRUCTORS ASSOCIATION OF BUFFALO.

HON. WALTER G. ANDREWS.
House of Representatives,
Washington, D. C.

HONORABLE SIR: On March 1, 1941, a copy of the bylaws and regulations of the National Defense Instructors Association of Buffalo was mailed to your office. Since that time much progress has been reported by the various committees and untold good has been accomplished. Men of importance in national-defense capacities have been interviewed and their opinions obtained and complied with. Key men of industry have been contacted with a view toward closer cooperation, and many excursions through their respective plants have been conducted.

County welfare and W. P. A. rolls have been reduced, and State employment service has been augmented by individual members, through their contacts and acquaintances throughout industrial plants and many placements have resulted. Trainees have been subjected to competition in these plants against nontrainees and have emphatically demonstrated the advantages and results of their schooling. Home study and attendance on their own time to teacher-training classes have fortified the members with additional directive and administrative abilities, thereby promoting a smooth, uninterrupted flow of graduates through the national-defense training classes.

To men of the caliber embodied in this association, this is nothing extraordinary. Each a craftsman in his own right by many years of study and service in industry, and in many cases through years of directive experience as foreman, shop superintendent, and master mechanic, it demanded only self-initiative to select the proper program and put it into operation. Men with less experience and ability might well have been confused if suddenly drawn from their daily routine and given a mass of bewildered, untrained, and unequipped manpower to whip into the semblance of mechanics in the short period of 10 weeks.

It is not the purpose of this association to exploit the abilities of its respective members. Each is master of his own destiny at this crucial time when industry throughout the Nation is pleading for skilled craftsmen. Each realizes his own potential ability and worth in a way best known to himself. In this land of freedom and liberty each has the prerogative of deciding how he may best serve his country in this hour of need, and just what sacrifices he cares to make and what reward he shall demand.

Because of these circumstances and the fact that certain conditions are changing rapidly, it is the consensus of opinion among members of this association that the following matters be brought to your attention. This association considers these matters worthy of careful consideration; when properly adjusted, they should enhance the position of the individual member to a plane consistent with his abilities, demanded efforts, and prestige.

For instance, permanence; throughout industry, men with seniority rights have been rapidly advancing to better positions and better pay with the assurance that as long as there is work to do their job is secure. Many national-defense instructors have left their positions and jeopardized their seniority rights to act as instructors but can get no assurance from any source as to the permanency of their positions or the opportunity to continue in this work for any definite period longer than 10 weeks.

Because they have no certificate to teach in public schools, national-defense instructors are informed that they can in no way enjoy the privileges or benefits of regular teachers. That they are not eligible for pension, for sick leaves, or vacations, or leaves of absence. National-defense instructors are humans, on a par at least with regular teachers. They are under longer, more intense mental strain

than most teachers. They work mostly all night, and since nighttime is the time for social affairs and family reunion, it becomes necessary for them to eliminate all such indulgences. No man will tolerate such a condition too long.

Existing laws and regulations place the national-defense instructors on the Federal pay roll, while they are obliged to seek guidance and redress from local authorities. Local authorities demand obeisance, but assume no responsibility for assurance or security, such as insurance, old-age pensions, or social security. This protection should be afforded national-defense instructors.

The rate of pay for Buffalo for national-defense instructors is $1.50 per hour for all night work. In many trades and vocations this is on par with regular day-rate schedules. Part-time instructors receive a higher rate for teaching afternoons, in addition to regular salaries which they enjoy. Comparable with industrial rates in industry, $1.50 per hour for all-night work is low. National-defense instructors receive no consideration for all-night work and have no opportunity to work overtime or to earn better wages.

In the copy of the by-laws which you receive, the purpose of this association is clearly defined. Members have both individually and collectively endeavored to carry out this purpose and that it has been achieved, is clearly shown on the records of industry. Because the members of this association intend to continue this policy and to improve on it wherever possible, it appears consistent with good policy that the above matter be given important consideration. It is clearly apparent that these matters were overlooked in the hurried set-up for national-defense instructors but it is earnestly desired that you will have the opportunity to reflect upon them and to exert your full influence in the effort to correct these improvident circumstances.

With cordial regards, I remain

Very truly yours,

PETER C. SUTTON,
Secretary.

All of Wall Street Is Not for War

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

EDITORIAL FROM THE WALL STREET JOURNAL

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am printing in the RECORD herewith a challenging and a clear-cut editorial from the Wall Street Journal for April 21, 1941. It offers a compelling argument against the use of convoys and points out the constitutional barriers prohibiting the President from ordering the use of convoys without first securing the sanction of Congress. It effectively answers the pleas of those who urge the President to usurp a power which he does not have and to strip the last vestiges of self-government from this country by taking unto himself the war-making powers of a free republic.

Mr. Speaker, I call attention to this editorial not only because of its thought-provoking qualities but because it offers encouraging evidence that the persistent clamor for war coming from Thomas Lamont, the House of Morgan, and a few other international banking houses on the Street is not the universal pattern of thinking on Wall Street. While it may be true, as so frequently charged, that most of the bankers and attorneys engaged in the great game of international finances and the plucking of big and easy profits from foreign trade are financing and promoting the war propaganda now sweeping America, it is stimulating to note that the Wall Street Journal retains its sense of balance, its primary loyalty to the United States, and its courage to oppose the international bankers by insisting that it is the duty and function of Congress to vote on the subject of convoys or any other step which will finally determine whether America goes to war or remains at peace.

The editorial follows:

[From the Wall Street Journal of April 21, 1941]

NO SUBTERFUGE

One of the arguments for using American naval vessels as convoys is that the action is necessary to make the lease-lend law policy effective. It does not make sense, say sponsors of the plan, to allow material for Britain to pile up on docks or to be sunk by submarines after we have manufactured it. We should ship it in American vessels and convoy those vessels.

When the lease-lend bill was before Congress some of its opponents envisaged this situation. They predicted that the next step would be a demand for convoys. Most of the advocates of the measure denied that the question of convoys was implied in any of its provisions.

We are recalling that, not for the purpose of raking among the ashes of arguments about things settled, but the course of the past may very well indicate the future.

Suppose we can get the ships to haul material to Britain. Suppose we can safely convoy those ships. Then are we likely to hear something like this:

"Getting a lot of materials to the British is useless unless she has the men to make use of those materials. Planes need men to fly them; guns, men to fire them. So let's send troops."

We have heard that Britain does not need men. So far as defense of the British Isles is concerned, that is probably true. Current developments do not indicate that it is true in Africa or in the Balkans.

Long ago we insisted that this country cannot be half in and half out of a war. Either we are all the way in, or we are not in. Despite statements to the contrary, we are not now in. The sentiment of the majority is for not going in.

No one seriously denies that convoys will be the first actual war step. Once it is taken there is no drawing back. And once in the war there is no choice except to go in with all we have.

We have said and we intend to repeat:

"Only by constitutional methods—that is, by enactment of Congress—should this country initiate a state of war.

"It follows that only by act of Congress should this country take steps which will cause another nation to attack it and thus force war."

And any other course is the course of subterfuge.

Elmer Lewis

REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. HOBBS. Mr. Speaker, too often we take our other blessings as we do sunshine and rain, without thought or any expression of gratitude.

But we have here in the Capitol of this Nation and in the service of Congress, a man who is a blessing and as to whom many are the expressions of gratitude. He is the remembered man, not "the forgotten man." To him, our sitting encyclopedia, we go with our daily problems concerning legislation, past, present, or proposed. He knows the answers and gives them so quickly that he seems to have anticipated and briefed every question in advance of the asking.

I refer to the distinguished officer presiding over our Document Room, Hon. Elmer Lewis, whose indefatigable and highly efficient service we appreciate tremendously!

This official, who serves so cheerfully, so faithfully, and so efficiently, cannot be given the full meed of praise which he has earned, but I ask unanimous consent to insert in the RECORD an article which appeared in yesterday's Star, by Will Kennedy, which pays a part of the interest on our mounting debt to him.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

The article follows:

CAPITAL SIDELIGHTS

(By Will P. Kennedy)

The absorbing interest of "Americans all" in national defense, tax and labor legislation is shown daily in a small office in the Capitol, just off Statuary Hall, tucked away behind a circular staircase. There sits Elmer Lewis, superintendent of the House document room, with a photostatic memory and a card-index mind, backed by 22 years of experience, consulted daily by Members of Congress, officials in all departments, bureaus and agencies of the Government, the legal profession, business executives and the general public of the entire Western Hemisphere.

Elmer keeps track of more than 22,000 bills per Congress, and those who have had experience with him consider it a bad wager to get against his knowledge of any measure presented to Congress. Upward of 1,000,000 bills have been filed under his supervision. He has such a remarkable memory that "he can give you more information about any measure than most anyone on Capitol Hill," as leaders frequently have remarked. Members of Congress take visitors from back home to meet Elmer as one of the institutions and challenge them to ask any question about legislation that he cannot answer promptly. He keeps a card index on all measures but merely for a permanent record and to confirm his memory. He has been called by one recent Speaker "the unofficial secretary on legislation."

It is not only his ability to help locate information wanted instantly and accurately

that has endeared Mr. Lewis to a wide governmental, legal, professional, and business constituency, but his zeal to be of service. To thousands who have not met him personally his pleasant telephone voice is familiar. Not only is he known as an "information authority" to those in the Capital City, but throughout the entire United States. He comes from Stoughton, Wis., and retains his official residence there. A student in the University of Wisconsin when the first World War started, he quit to join the Navy, was attached to the American mine fleet in the North Sea, and helped in the German blockade. In the document room he served his apprenticeship under the late Joel Grayson, whom both Speakers "Uncle Joe" Cannon and Champ Clark pointed out as a "walking encyclopedia." He was considered an "indispensable man," but he devoted several years to training Elmer "to do this job better than anyone else ever did."

The Responsibility of the Radio

EXTENSION OF REMARKS
OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ADDRESS BY THE VICE PRESIDENT

Mr. HATCH. Mr. President, at 2:30 o'clock this afternoon the Vice President of the United States delivered a very able address at the convention of the National Association of Broadcasters on the subject The Responsibility of the Radio. I ask unanimous consent that this informative address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In talking to the radio broadcasters, I wish first to express my high appreciation of all that you who work in radio have done. You have carried the love of good music to millions. To the lonely and sick you have brought messages of goodwill, and have made it possible for them to enjoy church services on Sunday. Today you are building goodwill in Latin America by means of a two-way radio bridge, carrying across the skyways programs which will better enable us to appreciate the culture and music of Latin America, while at the same time our good neighbors are learning through the radio to know us better. You are proving that the Latin culture of the South and the Anglo-Saxon culture of the North are fundamentally alike, because both are founded on belief in democracy and freedom. So many of the broadcasters have had an awareness of the public interest in many fields that it gives me an unusual pleasure to be here today to greet the National Association of Broadcasters.

The radio-listening audience demands of the broadcasters a great responsibility. They expect of you the wisdom, the decency, the goodwill, and the enterprise which are the heritage of America. They appreciate the way in which you have kept them up to the minute in world events. But now, in this most critical year of the world, we who use the airways find our work hard and dangerous as never before because there is an organized effort by the agents of the Nazi Government to confuse the minds of the American people and to promote ill-will and dissension among us. In spite of this evil interference continually distorting the news and spreading lies and confusion, we have to go on steadily with the democratic process of free discussion as best we can. We must defend the spirit of America in our own words and actions against the poisonous influences that are attacking us day by day. Radio has an especially deep interest in the freedom of discussion which permeates the very spirit of democracy.

When, in the year 1791, our ancestors adopted the Bill of Rights, political democracy as we understand it was a new thing in the world. The foundations of political liberty had to be laid down in freedom of speech, freedom of the press, freedom of worship, and freedom of assembly. That foundation was well and truly laid. We have not yet achieved perfection in the building of our political democracy, but we have made progress, and we are determined to hold the gains we have made and not to slip back to the savage tyranny that the Nazis threaten to impose on all freemen.

But political democracy was not enough to maintain the liberty and decency that we Americans hold as our ideal for human life. We found we must also have economic democracy, and we began to establish in law and custom the rights of economic freedom. Especially since the first World War, in the feverish prosperity and the shattering depression that followed, the need of economic democracy became more and more clear. After 1929, as the unemployment deepened, men were saying in every town in America: "What good is the vote without a job?"

We had to establish the right of every man in good health to have a job at fair wages, and the right of those who were aged or sick to have help, the right of youth to a fair chance for education and opportunity, and the right of all the people to proper food and medical care. Here also we have not achieved perfection, but we have made encouraging progress. We are determined to go on and build an economic democracy that is fit for a free people, and not to let the Nazis solve all our problems for us by reducing us to slavery.

But while we were building a political and economic democracy to protect our rights, we found we must go further and build into our customs and laws, and above all into our personal lives, a democracy of responsibility for the general welfare. The threat of war brings powerfully to our attention that we have duties no less than rights. And when the danger of war is past, if we are to succeed this time in establishing a true peace at home and abroad, we shall establish that true peace only by carrying on the full duties that are the strength and support of democracy.

We know now that the failure of peace after the first World War was partly the result of our own mistakes. We did our duty in the war, and we won all that any war can give—the right to make the terms of the peace. But when we had won the right to make the peace we were tired of facing hard responsibilities; and peace is a hard responsibility, at home and abroad. So we quit. We decided to go in for isolation, to mind our own business and let the world go where it would. The world has gone there.

Now we have a second chance to take up the responsibilities of a great nation in a world that desperately needs our help. This time our responsibility is greater than it was 25 years ago. This war will decide whether the Nazi tyranny shall impose its new order on the world, or whether the free peoples have another chance. This time, when we are called upon to play our part with the other free nations, to build and, year after year, to maintain a fair and democratic peace, we dare not shirk our responsibility.

To us here, who are not workers in what is called defense industry, it is clear that the duties of citizens go far beyond military defense. Total defense has no front line and no rear—where is the front in England? Are the front-line defenders of England the sailors who man the merchant steamers in the battle of the Atlantic? Or the Australians fighting in the desert of Libya? Or the night flyers fighting 30,000 feet above the streets of London? Or are they the women who tend the wounded where the bombs are falling, or who sit through long hours listening to the short-wave broadcasts of the enemy to decode his strategy from the pattern of his lies?

In our own country, too, there are many different services for our defense, but all are important. Some of our young men must serve in the armed forces. Many more, young and older, must give their time to building planes and ships and all the equipment for a military force. But the vast majority of the people must serve on the home-defense front, and home defense goes far beyond the material job of supplying food and clothing and houses. The home front includes every kind of service, and high on the list is the service of entertainment, information, and inspiration that is provided by the radio.

I hope to see the radio more and more reflecting the unbeatable spirit which is America in such a way as to make us genuinely proud of our defense effort and eager to go ahead producing with every atom of our strength. Our new Army camps are 90 percent complete. The Army air fields, including the overseas bases, are fully half done. Many of our big defense projects are ahead of schedule. We have worked hard, we are working hard, but we still are not working hard enough. The speed of our production, the magnitude of our defense effort during the next 6 months may easily make the entire difference between peace and war for the United States. The women must not only work themselves but stand back of the men, whether they be in management, in labor, or in agriculture, so that all of us will put our heads, our hearts, and our hands to the task. The job which we do in the next 6 months, turning out war materials in ever-increasing quantities, may easily make the difference between freedom and slavery for our children's grandchildren. Never has a generation of people had thrust on it such a responsibility as that which is ours.

Whatever opinions we may hold as to the American policy in the war, we are all of one opinion as to the need of building up the strength of America at home. We can use our talents and opportunities to help the American people meet the demands of the day with courage and confidence. We can help the people to understand what is going on, and where their service is most needed, and how they can find the greatest satisfaction in the responsibilities of citizenship.

For instance, if you are operating a local station, you can play a great part in home defense by calling attention to all the constructive things that are done to improve your community. Your neighbors want to be useful. They want to belong to the community and the Nation. What can they do? We can't do all the planning and organizing in Washington, and we have no desire to centralize all the planning there. Most of the organization for strengthening the life of each community will be done by local people who are self-starters and who know what the community needs. The other people who are good workers but are not able to start the work need to be told what is going on. The

radio can help the people find their places by telling the facts about organizations that serve the public welfare, as well as by spreading the official information about defense jobs.

In addition, you can do a great service by spreading widely the news of any community activity that has been tried and found successful. There will be some among your hearers who will take up the idea and use it in their own towns. Let me give you an example.

In Ohio, several farmers and their wives were asked to invite a dozen neighbors to spend the evening first in a discussion of farm problems, and second in refreshments and sociability. These groups of neighbors began meeting once a month at different houses, and a remarkable thing happened. Almost everyone came and kept on coming to the meetings. The idea began to spread. Now I am told there are over 100 of these monthly meetings in Ohio, and the system is spreading to other States. It seems a simple thing, hardly worth telling about. But this simple story of neighborhood meetings is worth its share of time on a national hook-up here and now, because these meetings fill a real need. Too many Americans are lonesome because the old-fashioned neighborhood has disappeared and has left them not belonging to anything. People can enjoy the movies, but they can't belong to a movie. These farmers in Ohio have built themselves a neighborhood to belong to, and there is new life in them. This story is an illustration of what you can do to help people find out how to take hold in their own communities. And, of course, when you have told them what is being done, you will tell them where to get exact information. Exact information about farmers' neighborhood meetings in Ohio can be obtained by writing to the Farm Security Administration at Washington.

But I cannot tell you all the stories, nor work out all the methods that you know so much better than I. All I can do is to urge you to use your own imagination. The people are important, each one in his place, but sometimes they don't know how important they are, and so they are discouraged. Tell them, and let them know how to get the feeling of belonging to the team.

You know that a man working in a powder plant is not the only defense worker in his family. The woman who makes a home for him and who takes her share of the risk without losing her nerve is as important as the man who does the labor in the plant. You know that not only in England under fire, but in America under the strain of national danger, women are as important as men, but the work that women do is more often left without recognition or understanding. You, the radio men of America, have the techniques to bring recognition and encouragement, and the sense of belonging to their country, to women as well as men who are bravely carrying their share of the load. You have done much good work along this line; I am urging you to do still more of it. You yourselves, when you do this kind of a job, are members of the team.

There is a second line of service that I should like to mention briefly, though the idea is entirely familiar to you. Everyone knows that news from abroad is censored, so that even what is said by American reporters is cut down to a pattern that represents the plan of the censorship. I believe it is worth while to emphasize continually the purpose of the governments that have colored our news. The Nazi government is lying even when it lets an American reporter tell a fact that is a true fact, because its purpose is to make Americans believe that Germany has already won the war and that we may as well quit. The pattern of truth and lies that comes out of Germany adds up to a planned attack on our security. We all know that. I suggest that we keep always in mind that the people who listen to us may be deceived unless we are careful to point out the purpose that lies behind the news and how that purpose is related to our interests as Americans. It is truth in advertising, not deception, to put the skull and cross-bones label on poison bottles.

Finally, and most important to my mind, is the opportunity that is given to all those who use the radio to promote unity inside the United States and a reasonable attitude toward all the world. We are under constant attack by the Nazi propaganda that tries to create bad feeling among us and false ideas about other countries. One of the greatest contributions any one of us can make to our defense is to resist this propaganda of hate at every point.

We can help the defense of America by going out of our way to encourage the service of all those minorities in our country who are loyal to the democratic ideal and anxious to belong to our brotherhood. It is good to remember that the two chiefs of the defense program are both foreign born, both natives of conquered nations, and one a Jew. Let us make a special point of recognizing the full membership in America of Jews and Christians, of whites and Negroes, of the Germans who came here for freedom's sake, of Italians who have no desire for a Nazi victory that would enslave their friends in Italy. Let us take a special pleasure in reporting the athletes, the great musicians, the business leaders, the successful Americans in every line, whose unusual names proclaim that they or their ancestors came from nations that now lie under the Nazi terror. They are glad to be Americans, and we are proud to have them among us. It is worth our while to say we are proud of Knudsen and Hillman, Einstein and Kreisler, DiMaggio and LaGuardia, and thousands of others who have made notable contributions to our life.

We shall also do well to keep our minds clear about the German people here and in Germany. The German people are not the same as the Nazi gang that has seized control over Germany. Most Germans are not gangsters. In Germany, the majority of the people are caught in a trap. They do not dare resist the Nazis, and they are afraid if they quit the war they may be punished unmercifully for the Nazi crimes.

Let us do our part to show here in America that we can distinguish between the great majority of Germans, whom we know to be good citizens, and the few who belong to the Nazi gang. The time will soon come, I hope, when we can help to encourage the decent, civilized Germans who are still caught in Germany to release themselves from their Nazi masters. In all that we say over the radio, I believe, we shall do well to keep that object in mind, for the cure of Germany will be an essential part of a true peace.

These are the thoughts that I should like to leave in your minds. We who do the talking need to take pains to understand the democracy that we are defending. Democracy is to be understood only by getting down to cases, where people act on their own initiative to serve their country in the place where they are. Let us understand this democracy of service and responsibility and tell the people what they are doing so that they can draw inspiration from one another. Let us do our part also to build the confidence of the people in their own strength and in the comradeship of all the free citizens of our country of every race, color, and creed. By fortifying our own democratic spirit we shall help in protecting our country against the attacks that are made upon her. Beyond that, we shall help to carry the light of hope to the people of Europe who are waiting their chance to overthrow the conqueror and win back their freedom.

The Selective Service Act

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. ELBERT D. THOMAS OF UTAH

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely and able address on the subject Does the Selective Service Act Need Amendment? delivered by the distinguished senior Senator from Utah [Mr. THOMAS] over radio station WMAL on the night of May 12, 1941, on the National Radio Forum under the auspices of the Washington Evening Star.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DOES THE SELECTIVE SERVICE ACT NEED AMENDMENT?

Does the Selective Service Act need amendment? It is, of course, in its administration being modified from day to day. The act also has had one or two corrective amendments suggested. Does it need general amendment? I will answer that question by first stating the purpose of the act. The act came into existence at a time of great national pressure for military preparedness and national defense. The President of the United States had already suggested that our industries should be expanded to the place where they could produce 50,000 airplanes a year. The foreign nations at war were ordering our output. The Neutrality Act had been amended so that these nations could purchase military equipment. The fall of France brought consternation to our people. The responsibilities which rested upon our Government to maintain the law and the policy of the Government in regard to the protection of the American states and the expansion of the Monroe Doctrine all contributed to the desire for increasing our national defense. A bill was introduced which would have provided for almost complete compulsory training and the registration of all males in the United States between the ages of 18 and 65. A most drastic law from the standpoint of our military history. If we had planned gradually for the great emergency which seems to be facing us we, of course, would have started years ago with the building up of manpower for industry, for education, for military service, and for the intensified national activity in general.

The theory of the Selective Service Act is based upon the fundamental notion that persons should serve in those capacities of national emergency when the endeavor of all is being stressed for a single objective, that each person should serve in that capacity which he can serve the best, and the judgment as to where he can serve the best is to be decided in the light of circumstances and by local boards in local communities. The Selective Service Act which finally became law is basically an educational act. It deals

with the training of men. It does not provide for universal military training. It provides for the training of an extremely comparatively small select group, each person's selection having been determined on the basis of actual need. In working out what should be the policy of the Nation in regard to registration of names from which to make this selection a compromise was reached after days of debate and after disagreement between the two Houses of Congress, which compromise was decided primarily because it was in keeping with the habits of the Army in receiving enlisted men with just a slight modification. The Army will recruit persons between the ages of 18 and 35. Both Houses had already decided that persons under 21 should not be registered. The theory behind that decision was that a person should be free from a break in his schooling and that the Army took those who wished to enlist at 18 and that such organizations as the Civilian Conservation Corps and the National Youth Administration which are giving splendid training should not be interfered with. The compromise reached made it possible to register those persons between 21 and 35. This would give names covering a great variety of occupations, calling for a great variety of deferments and exemptions and would allow better administrative experimentation in the initiation of the act.

We were told that as a result of study of the best available information furnished by the War Department and our Census Bureau that male persons between the ages of 21 and 35 would supply 13,500,000 names. This would be over 14 or 15 times as many persons as would ever be called in a given year. As a result of the registration we discovered that instead of only 13½ million persons being registered nearly 17,000,000 were registered. This fact should make it possible for us to make 3 general deductions: First, we did not know exactly the number of names a given group of ages would supply. Second, we learned that there was no general desire on the part of the people of our country to resist registration, but that registration itself was extremely popular, and the response was very much greater than was anticipated. And, third, that selective service when men were called would honestly be selective service, and in no sense universal training, because in a given year but 1 name out of 17 or 18 would be called to train. Thus, we see that the act in itself, and the administration of the act, so far has shown us that we have not the definite information needed for a modification or amendment in a general way at this time.

Before leaving this phase of the question, let me contrast our experience in 1917 with the registration last fall. There are still 169,000 who did not register either in the first or the second registration days of the 1917 draft. The Selective Service Act should be considered basically as a peacetime act. I mean that literally. It is service for training. The voluntary service for enlistment in the Regular Army moves on. The 120,000 Reserve officers are being called outside the scope of the Selective Service Act. The law itself demands that persons shall not be called for this training until the Army is ready with clothing, with equipment, with properly trained officers to give the training, and every safeguard has been placed in the act to protect men from the hazards experienced in 1917.

The quota system for training was set up so that each State could take credit for the voluntary enlistments into the armed forces of the country. I repeat the Selective Service Act is primarily educational. From the 900,000 men selected for training each year will come the nucleus for the new commissioned officers and noncommissioned officers who may enlist for service in the Regular Army.

Now a word about the amendments which have been suggested. First, there is the amendment that the registration be changed to 18 to 25 years. A word for and against that amendment is in order. In the first place let us find out just what the present registration is accomplishing before we change it. It was anticipated in the beginning that the first years of this training would be more or less experimental; that it would be wrong to take from the life of our Nation a greater proportion than was necessary of any given age of young men. It was thought, too, that in the beginning of this great training maturity and past experience should also be brought into the training as well as the immaturity of the youth. As time goes on when the trainers, which means the officers, become more efficient and a great body of young, trained, noncommissioned officers have been selected, then the tendency will be to reduce the upper age limit year after year. This should wisely be done right now by the selective-service method. A man, for instance, who registered in his thirty-fifth year and is not subject to call until he is 36 should not be called under ordinary circumstances.

The person selected should be called in the spirit of improvement of that person. The local boards must be trained to understand this. If you have a prospective officer say in the Medical Corps—a boy in his junior or senior year in medical college, or in a hospital—he should be deferred because his services as a doctor are too valuable to be interfered with. Necessary men in industry, when their services are more essential in industry, should definitely be deferred. But at the same time the Selective Service Act lays down the principle that in a democracy all men are entitled to equal privileges, as well as equal responsibilities. These men should not be deprived of their year's service and training if they think it is to their advantage to get it. Thus the voluntary system must be stressed even in the spirit of a local board's passing upon the desirability of an individual's training.

The Selective Service Act is to continue for 5 years. My humble opinion of it is that it will become so popular that it will be one of our continuing institutions. I repeat, it is primarily educational in its nature. Only 1 out of 17 persons can serve. It is a privilege to be called to this training. So far we have had a civilian director of the Selective Service. In making my first speech in defense of the Selective Service Act, I pointed out that that position should always be in the hands of a civilian. It is primarily civilian training—that is, the fundamental thought for that year will lay down the principle of proper discipline as to health, eating habits, ordinary morals, personal hygiene, and learning the fundamentals basic in citizenship. Even in the deepest war most soldiers' time is spent in training and in the present war, which is so highly mechanized, neither the country, the Army, nor the fellow soldiers can dare trust their lives and the very expensive equipment in the hands of the inefficient. You must remember that when 8 men are used in one of our great bombing planes, 3 of these men generally are commissioned officers. None of them are ordinary privates. They are generally noncommissioned officers or first-class privates. That will be the case in the mechanized tank groups, chemical warfare groups, motorized groups on aviation work, and the jumpers, for example, in parachute groups.

The Selective Service Administration should quickly learn how to use the year's training for corrective physical shortcomings and corrective health. In the past wars our standards have been so high in the first draft that only the highest physically fit are taken. When manpower becomes wanted we reduce our standards. How much more sensible it would be to reduce standards of selection for this year's training and correct such things as flat feet, improper eyesight, poor hearing, and ordinary physical defects that have come from malnutrition. Dental defects are nearly all corrective. This corrective work should also be stressed.

Again let me point out that the Selective Service Act fundamentally means the building of citizenry for America. Again let me say it is educational in its needs and I again want to call your attention to the fact that 900,000 selected youths of our country called to serve over a period of 5 years gives us 4,500,000 young men to train. Would any educational administrator ever have a greater opportunity than that? All of the experience in regard to corrective health measures which our great universities have worked out for their students should be made available for these young men. That idea is one which must come by growth.

I think it would not be out of place for me to suggest here what I have said about the great meaning of the Civilian Conservation Corps. That organization gave to boys a chance for 6 months' socializing experience, life with other men, companionable work where they learned the fundamental rules of men's interdependence and community endeavor. These boys, deprived generally of high school and college, experienced the socialized companionships that our Army and Navy were giving, were provided with a chance to work with other men, to live with other men, to grow and to learn the fundamentals of social hygiene and citizenship.

Selective-service groups then must furnish future instructors for other boys as they come along. The golden opportunities which our country lost after having together nearly 4,000,000 men in the last war should not be lost again. We attempted by the activities of the Interdepartmental Social Hygiene Board to teach the Nation the lessons which the great concentrations of 1917 gave us in regard to venereal diseases, but the people did not like those lessons and they were stopped. We attempted to train the boys by setting up vocational opportunities in all of our schools. Many gained much and some little, but we find now that the general health of the average boy is not much improved on what it was in 1917. I believe that if we can continue this selective training over a period of a number of years that the Nation will derive benefits in regard to social hygiene, proper living standards, proper food, and social living which will count for quite as much as any other factor in our whole big American educational scheme.

The Army is now offered this challenge: Can you make of these 900,000 selectees the type of citizens America expects you to make? Your first task, of course, is to train them for war, but your outstanding task is to train them for citizenship. American democracy rests upon a trained citizenry and a trained citizen Army is now a possibility. Thus the whole standard of American life may be raised if the administrators of the Selective Service Act will live up to its potential possibilities. I, of course, have faith that they will.

Now, back to the original question: Does the Selective Service Act need amendment? Better not to amend excepting to correct a defect. Better to administer the law in such a way that we accomplish the general objectives of the bill. And may I here state that when the bill that became the Selective Service Act was introduced it contained flowery language about saving our Nation from the ills that seemed to threaten, but the Senate Military Affairs Committee decided upon simple positive statements because the training itself justified the law and therefore they made the purpose of the law, "To provide for the common defense by increasing the personnel of the armed forces and providing for its training." The spirit of the act is found in this very short declaration "that in a free society the obligations and privileges of military training and service should be shared

generally in accordance with a fair and just system of selective compulsory military training and service."

There is one phase of the operation of the Draft Act which needs remedy and should be remedied at once. The act very wisely sets up a definite line of jurisdiction between those persons who are civilians and those persons who are inducted into the Army. Two groups of officials preside over these jurisdictions and each draftee must be passed by these two groups of officers. In each case a medical examination is given, but sometimes the doctors do not agree, and in this disagreement between doctors grave injustice is done. We all remember in the World War how men tried to enlist, but were turned down because of some physical defect and then were drafted and found all right. This resulted in loss both to the Nation for several months of the services of an individual and a loss to the individual of a chance for advancement. There are cases where men have been called up. They have been given farewells, as it were, by their friends, they have resigned their positions, have been passed by the draft doctor, and, in some cases, they have even given away some of their civilian clothing. Then they were disqualified by the Army examining physician and subsequently returned to civilian life, with its obvious embarrassments and difficult readjustments. The problem, then, is bringing the two groups of doctors together, and the administration should see that this is done at once so that the embarrassments which have occurred will not be repeated. One reason for the Selective Service Act is to overcome these various injustices. They can be overcome by a simple decision to allow a rule of reason to control.

The Selective Service Act contains a section which I sponsored that the Federal Government first had to guarantee men who are called from their work their jobs when they come back. This to me is very important. Not only do I want the men's jobs guaranteed but the reason for the act was to put both the employer and employee in harmony with its spirit, both realizing the educational good that would come from the year's training and thus causing the employer to want his men to get this training and causing the employee to want the training knowing that his job for his future industrial welfare is not to be jeopardized.

The Selective Service Training Act has now been in operation approximately 8 months. During this period we have seen many thousands of young men inducted into the Army. These men have come from all walks of life, selected in a thoroughly democratic process. They are being trained in accordance with the theory as outlined in the basic program.

I warrant that if it were possible to interview each one of these trainees and ask him whether he thinks that he is being properly trained and is learning things which will be of great benefit to him in the future, an overwhelming majority of them would answer in the affirmative.

Now, I want to hasten to add, if this training is so beneficial, why deprive any person of it by discriminating one type of person against another, all other facts being equal? Some complain that many are being selected and inducted who should be deferred, for various reasons. I will confess that cases such as this have occurred. But these are few and far between. We have the same thing happen with every law, though. We have even had people sentenced to death and long imprisonment wrongly through a miscarriage of justice; but would you repeal or amend that law simply because of that? The problem, then, rests in the local administration of the law rather than in the changing of the law itself. The local board, if it performs its duties honestly and judiciously, will do credit both to itself and the community. The boards are composed of highly respected, honest, and intelligent private citizens, and they are worthy of every confidence.

Let us, then, give this law a fair opportunity to operate, so that we may have the benefit of an ample background of experience with which, if need should later arise, we can intelligently consider proposals for amending it.

Responsibilities and Opportunities of University Extension

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Responsibilities and Opportunities of University Extension," delivered on May 7, 1941, by the able and distinguished senior Senator from Utah [Mr. THOMAS] at the twenty-sixth annual conference of the National University Extension Association in Oklahoma City, Okla.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Dr. Horsfall, ladies and gentlemen, Dr. Horsfall forgot to mention that he has never seen me read a speech in his life and ordinarily I do not do it because I ran away from school during the period in my elementary education when students learn how to read and I have never learned how to read. I thank Dr. Horsfall for his kind words. He is safe in saying anything he wants to about me out here but since we, as educators, ought to all hang together, I warn him he had better not go home and say anything good about me or he might lose his job.

I wrote this talk because I knew that something would happen like has happened here today, something to make my mind jump all over the globe and back again. The stimuli that come from meeting with people who have had like ideals and who have seen like deficiencies and who are therefore sad. All of those things would cause a man to let loose of himself and talk in such abundance that your program would be marred.

I agree with Dr. Kelly that all wisdom cannot be in Washington, especially when both Dr. Kelly and I are here. [Laughter.] In fact you will find, if you listen through this speech, that I am such a great believer in Jeffersonian fundamentals that I would never believe that all wisdom could be centered in any one place, or in any one person.

It is with genuine pleasure that I meet with you this morning. I have been, during the past week, conferring with educators from all parts of the country incident to a public hearing in Washington on legislation designed to meet our grave educational problems. I must confess that as a university teacher with 20 years' service stripes to my credit these consultations have afforded real enjoyment and have been inspirational to me and at the same time have reminded me of the warmth, sincerity, and intellectual stimulus to be gained in the atmosphere of university life. I, therefore, especially welcome this opportunity to participate with you in this most important university activity.

To the thoughtful person, events throughout the world have been a cause for much sorrow and grief. At the same time, however, they should awaken within our hearts a desire to put our own house in order, so that we may safeguard for ourselves and build for our fellow countrymen a civilization free from devastation and barbarism. We wish to live in peace with a complete enjoyment of the freedom guaranteed to us by our Bill of Rights. It is a compliment and testimonial to our form of government and to Democratic processes that we are able in times of emergency to take self-inventory, so to speak, and make the necessary adjustments to make ourselves more efficient to cope with impending challenges.

If we can turn back the pages of history for a few minutes and review our national record during previous periods of emergency and trial we shall see that democracy has risen to its full stature and met these challenges with courage and conviction. In such instances when apparently insurmountable forces were about ready to wipe out our national existence we have taken note of the scientific principle "that to every action there is an equal and opposite reaction," have marshaled our economic, social, and political forces, and met the challenge. History reveals that in such periods of emergency, during times of hardship, struggle, and stress we have made our greatest advancement. This is especially true in the field of education.

Our great Revolutionary War brought forth the ideas and theories which evolved into the public-education system of America. Two years before the surrender at Yorktown, which assured the establishment of our Nation, Jefferson, acting on his deep convictions, wrote a bill for the establishment of public education in the State of Virginia, and during his lifetime made such declarations and utterances in support of education in democracy that his viewpoint in this regard is unmistakable. Let me cite you an example—Jefferson said: "If a nation expects to be ignorant and free in a state of civilization, it expects what never was, and never will be." On another occasion he declared, "No nation is permitted to live in ignorance with impunity."

We are also well aware of Jefferson's wisdom and educational interest in the establishment of the University of Virginia, and he at that time was even so far ahead of his time in this regard that he set aside a tract of land to be used for experimental purposes—this perhaps, constituted our first university experimental station.

I personally feel that if for no other reason than for his contribution to education, it is fitting that we honor the memory of this philosopher of democracy with a great shrine in the Nation's Capital. As Vice Chairman of the National Thomas Jefferson Memorial Commission, I share a far deeper feeling of joy than is possible for me here to express in the dedication of this shrine.

Washington and other founders of our Nation shared Jefferson's views on the importance of education. In the Ordinance of 1787 land grants for schools in the Northwest Territory of what is now Ohio, Indiana, Illinois, and other Midwest States were voted. This decision came on the heels of the Revolutionary War. Actually this famous ordinance adopted for the Middle West some of Jefferson's ideas which were rejected in Virginia. The wise decision of the ordinance

laid the foundation for our public schools in the Middle West, and, by example, throughout the Nation.

Now turning to another period of trial in our National history—the era of our struggle caused by the Civil War, we note that Federal interest in vocational preparation first took specific form, and in the year 1862 the Morrill Act was passed which laid the foundation for our present system of land grant State universities and colleges of agricultural and mechanical arts—the college system in which more than one-fifth of all college students are now enrolled.

I cannot help but stop for just a half a moment and call your attention to the fact of our evolving and changing Constitution and how the men who were responsible for the setting up of our Constitution and for the saving of it were the men who understood it best. And how men who come along and become beneficiaries of that Constitution, but slight in their judgment and restricted in their abilities to understand its growth, become the victims of a legalistic approach to it and cannot understand it.

The Morrill Act was passed first in Buchanan's administration. It was vetoed by President Buchanan because he pointed out that in the Constitution there was no provision for the Federal Government assuming the responsibilities of education. But Abraham Lincoln later on discovered that in the Constitution there was no prohibition against the Federal Government assuming the responsibilities of education and passed the act.

Lincoln, like Marshall of old, realized that the Constitution was set up to endure through the ages and, like Marshall of old, he caused it to be expanded so that it could in very deed become the companion of the American people in working out their destiny in liberty and in advancing the welfare of men, women, and children who make up the American people.

Turning now to the period of the Great World War we note that the Smith-Hughes Act was a product of the year 1917. It was this legislation that afforded the great stimulus to vocational education. Of course, anyone who is at all familiar with the schools of the United States is aware of the great progress which has been made during the past 20 years in the general field of vocational education. Due to legislation passed during this World War period, leaders in education have come increasingly to recognize that education for vocational purposes is a legitimate and necessary part of the public-school program.

The next critical emergency to face us was of a different variety, but was, nonetheless, a direct threat to our social scheme. I refer to the depression period. This national shock awakened our interest and consciousness in the welfare of the underprivileged youth. Here, again, when once we had uprighted ourselves after the staggering blows had leveled us, we acted resolutely and with dispatch and launched the manhood-building C. C. C., the N. Y. A., and W. P. A. programs. Here our Government entered into a new form of employment—the development of the worker was considered and advanced just as much as the accomplishment of the mechanical project under consideration. What is more important than the human development envisioned in these programs? As far as the practical aspects of such planning are concerned, I venture to say that there is not a single county in any State in the entire United States that has not realize tangible improvements of large magnitude because of the efforts of these governmental agencies.

Also, it has given me a feeling of great satisfaction to see the C. C. C. officials in the past 3 or 4 years make use of a little section of their enabling act permitting them to issue certificates of ability for work well done and completed. Because of this practice even before the onrush of industrial activity caused by the defense program employers were looking over the C. C. C. rolls for worthy candidates when they had jobs available.

May I pause there a second to show how much you need the educator at the elbow of the Government administrator. Our little paragraph said that the director may issue certificates of proficiency. It was not read, it was not studied. Its possibilities were not appreciated by the directors for some 2 or 3 years before this little instrument of recognizing the worth of the human individual was brought into play. There is more than one way to make a man.

In 1938 while visiting a camp in the West I was conferred an honorary certificate of ability as a truck driver. I took this back to Washington with me, had it framed, and confess that I have displayed this more and discussed it at far greater length than I have concerned myself with other degrees that it has been my pleasure to receive. I promise, though, not to use this certificate in getting me a job.

These are not the type of degrees that hang on walls or rest in trunks to collect dust. These mean bread and butter jobs for their recipients. I am happy to note that this technique which inspired our little group when we drafted the present C. C. C. Act has been adopted in the setting up of recent defense vocational programs. It is indeed a step forward in our educational institutions.

We can, I suppose, also consider the successful passage of the George-Deen Act as a product of this depression period. Though this act was not passed until 1936, the ground work for its passage and the urge for its passage was prior to this date. This legislation supplemented earlier vocational education programs and permitted the recognition of the distributive occupations, and the public-service occupations in the scope of Federal aid.

I relate this historical data to you this morning to point out that it is not new for American education to be confronted with crushing challenges. What is important is that the American system has permitted a forthright and ingenious solution of the problems at hand. Every crisis for a free people presents a challenge to education. Whenever democracy meets such a challenge it arrives at its solution and offsets danger by thinking and working out the solution to the impending trouble. This process of thinking and working both require education if desirable results are to be achieved. In fact, the problems of this generation, in contrast to those of earlier days, are so complex and difficult that education alone is the preeminent factor to their solution. We know that today, for instance, with the continual hum of industrial activity and scientific revolution, that the field of education is the cornerstone upon which we must build and provides the path which we must follow if we are to arrive safely at our destination.

What then can we expect of education today? Due to the extreme gravity of our present national situation, I suppose that many would, by the token of our strides during previous periods of emergency, expect a veritable reformation or period of renaissance to take place. As a teacher, I can merely point out to you the record of our experience. How far shall we travel? Just as far as the ability of the University Extension Service can reach. If your mission is to carry the university directly to the people your responsibility is to meet every demand which the needs of your country shall make.

The Army and Navy's chief peacetime responsibility is to keep themselves so organized that almost overnight expansion for supreme effort is possible. Since training is essential to overcoming any emergency is it not the task of extension divisions to be the drafters of and the leaders in the university's extraordinary responsibility of furnishing the trained manpower for any demand the Nation may make? The country's most essential reserve is your responsibility. Will you carry on? I think you will. Have you the imagination to anticipate needs? I know you have; that you will serve, meet every demand, and seldom be thanked, is a foregone conclusion. If you expected reward you would not be in the extension service. [Laughter.]

You are to prepare others to receive rewards. The extension worker must do the impossible. Such factors as time, background, residence, social influences, preparation, educational sequences, campuses, equipment, are not for you. You must educate almost by fiat. The country orders, "Let there be 5,000 gas enginemen" and you go to work and there are 5,000 gas enginemen. It sounds like magic, but it is not. It is merely the most sensible system of practical education yet invented. The time, the place, and the circumstance form the stimuli. You merely feed your students to the utmost of their potential capacity. Individual training thus comes naturally and men grow as they can, not measured by semesters, credit hours, or graduation days, but by tests of proficiency. I am not criticizing standard educational habits and customs. I am not even comparing them. I am merely justifying what you must do and calling it good even when measured by educational terms.

No one can say how far we must go. We do know that in the months just ahead of us, freedom faces the greatest test confronting it since the days of Jefferson and Washington. Education, therefore, the guardian of freedom, faces its greatest challenge. We know that the previous gains that I have related to you have not been made by mere idleness. They are not just natural results which have developed as a byproduct, so to speak, from our having to face national issues. Instead, in most instances, they have played a large role in the solution of the problems themselves. Education must, therefore, raise its colors, and prepare to bravely face the problems ahead. If we are to succeed, we must have education on the march. Extension implies movement and action. Ordinarily persons go to college. Your duty is to take the college to persons. Your very mission is the Nation's greatest compliment to the country's very dependence upon education that I know of.

As I have indicated, I do not meet with you this morning to assume the role of an oracle. Instead, I come to you as one vitally interested in our plans for the future. It is through frank and open discussions that we are able to plan and formulate our major policies. I feel, therefore, when we have such meetings as this and exchange our views we have a healthy sign that we are taking hold of the situation before us. We have often heard that an ounce of experience is worth a pound of learning, or to put it another way, that experience is our best teacher, we should, therefore, as much as possible draw from our human experiences and act accordingly.

The existing emergency has been with us now for many months, and it now appears that it is getting worse before it is getting better. We have had during the past year an opportunity to get things started. Education leaders throughout the country have at various times asked themselves, "What can education do to help America in the crisis?"

More than 2 years ago preparations for an emergency had been made. An inventory of all the vocational schools and all the equipment for training to be found anywhere in the United States had been made. With the fall of France and the Lowlands there was an even greater awakening to the imminence of peril to our institutions, and on June 17,

1940, the day after France asked for an armistice, Congress had appropriated $15,000,000 to operate vocational schools throughout the summer. Four days after the signing of this bill by the President vocational schools throughout the country opened their doors for registration. By July 15, 2 weeks later, 30,000 citizens were enrolled and engaged in learning skills needed for defense industries. By August 15, 1 month later, enrollments totaled nearly 100,000 and placements in industry had already begun. This is a fact to be heeded for those who are inclined to say that democracy is slow. Here is an example of the swiftness with which democracy can meet a challenge.

As the crisis deepened, the need for more skilled workers became apparent and Congress again acted, adding $60,000,000 for a broadened program. Today, a little more than 10 months after the inception of this defense-training program, a great army of skilled workers has been graduated from our schools and colleges for the front line of democracy—the front line which today stands in the shops and factories of American industries.

You have all read and heard about the magnificent new army of soldiers which the United States has organized in record time. You have heard very little about this other army—this army of defense workers which has been trained in our schools. I wonder how many of you realize that more than a million citizens have been trained in the public schools for defense in 10 months, since July 1, 1940.

This army of men for defense industries is more than twice the size of the draft army at this time. By the end of June it will be nearly as large as the draft army, plus the National Guard, plus the Regular Army. In this industrial-defense army are men of all ages. Some women are entering the ranks. Many more will follow as the needs of industries grow. This army is education's answer to the call on America for trained workers to staff the arsenal of defense. In the battle for democracy, education can take pride for being early in the field. It is hoped that it can never be said in this crisis that American education arrived "too late with too little."

Let us contrast this situation with education's part in the last World War. I do not discount the part it played in 1917. To discount it would be to discount hours and hours and hours of my own efforts. But this contrast is made to show that all the gains we made in 1917 and 1919 have not been lost.

April 1917 found American education unprepared to meet the demands of the World War. The Smith-Hughes Act for vocational education had been passed only 2 months earlier. In the United States there were only a few good vocational schools established by certain cities and certain States. Therefore, training of workers had to go on within factories under conditions a good deal less than satisfactory. Perhaps that is one of the reasons that almost none of the tanks, almost none of our big guns or ships, and very few of our airplanes were completed in time for use in the last war.

After peace came, our cities and our States, with the aid of the Federal Government, began to build a real system of vocational education in the United States. They began to build large and well-equipped schools. They began to recruit and train capable teachers of vocational skills. They began to develop courses of study which would teach these complicated skills in the most expeditious and effective manner. They began to develop the administrative organization to operate a Nation-wide, but locally managed, system of vocational training. Thus, when the aggressor nations began to march in Europe, the United States found itself with vocational schools and equipment representing a total investment of $1,000,000,000. I outline this to you not to suggest that we are entirely prepared to handle the vocational problems presented by the present emergency but to show the tremendous gains that we have made since the last World War.

As far as the present situation is concerned, however I am afraid none of us realize the full scope of the responsibilities of our vocational educational program. If this war is to be fought not on the battle fronts but in the industrial plants of our Nation, then American industry is the first line of defense of democracy. The proper functioning of our industries depends on the skill and training of our industrial workers and managers. It is only through education that the skill and adequate training can be realized.

As I have said, education is, therefore, the cornerstone of our defense program. We cannot afford to have any educational bottlenecks. And we will not have as long as our Nation expands through and under the direction of our trained educators and educational directors.

In looking to the future, then, we see we have much to do. What are some of our other challenges? Let me suggest a few:

The first is education for health. I do not know whether you have been watching the draft-rejection figures, but I have. According to reports released by the United States Army, 40 percent of the young men called up for the draft are being rejected in preliminary and final physical examinations. This is two out of every five. It means that two out of every five men are not physically fit to defend their Nation.

Of course, these figures do not mean anything until you inquire into the nature of these physical defects. When you do you will find that dental defects rank very high as the major reason for preventing men serving their Nation. In fact, as we examine these figures it is clear that many of the physical disabilities might have been corrected by proper attention to health. This is in part the job of the schools. We cannot today correct the defects which prevent men serving their Nation, but we can begin now with a vigorous health education program which will make our present generation fit to meet the emergencies of the future. And, indeed, to serve efficiently in peace as well as in times of emergency.

In 1918 it became one of my tasks to help administer the interdepartmental social-hygiene work. The World War and the concentration of troops had taught us many sad things about our body politic and about the social life of our Nation. One of the saddest was the prevalence of venereal diseases. If you have ever tried to pioneer in the teaching of decent habits, something which people do not like to talk about, you will know the need of real educational training. Our papers would not print such words as "venereal." They would not talk about syphilis. Our churches would not let our doctors come into their localities. And so a great effort derived from a remarkable stimulus, backed by the vision of one of the greatest men who ever served as President of the United States—a man who understood the need of a trained citizenry—failed. We failed because the people, for some reason or other, refused to talk about those things they hated to have mentioned.

That is not the first time in the history of man that that has occurred. I trust, though, that it will be one of the last times, and the educators should see that it is the last time.

Jefferson said, "Let the truth be known," and he predicted that ultimately it would prevail if it were known.

There was an opportunity, there was a chance, and there was a failure. Are we going to have any more failures like the failure of the Interdepartmental Social Hygiene Board after the last war?

Reports which reach us from abroad pose another challenge to American education—a challenge related to health education. The aggressor nations have succeeded in a large part because their men are physically fit and they are physically fit because the nations have taken pains and have spent funds to make them physically fit from early youth.

And here we must compliment Germany, not only with a changed attitude toward education but also her bravery for teaching it. One of the greatest institutions in the world, a great museum in Dresden, for the teaching of the ills of social diseases and one of the most satisfying experiences that anyone could have who was at heart a real educator would be to go to this great institution and see boys and girls, not by the scores but by the hundreds, going together hand in hand learning about themselves and how to prevent getting terrible diseases.

Can American education develop a program to create physical fitness for all youth in the United States? Nutrition is another subject of national attention. Millions of Americans do not have the right kind of food or do not know how to select or prepare food satisfactorily. Here again is another challenge to education.

We have not considered the subject of home defense in the way the British have worked it out, for instance, but if we are to resort to such a defense program, it is clearly apparent that if communities are to be put in trim to handle such a program we need skilled workers and organizers—again we have education.

Lastly, I bring you a challenge that looks beyond the present emergency and yet perhaps the most important challenge of all to American education. It has been said of the first World War that "we won the war but lost the peace." We won the war because we knew how to bring together an army of men and machines to overcome an enemy. We lost the peace because we were not wise enough to create a system of cooperation among nations. We are paying now for our failures to be wise enough to win a peace. We have already appropriated $39,000,000,000 to remedy that error. We will appropriate many billions more. Every pocketbook will be affected by this failure of our people and the people of other nations to be intelligent and wise enough to work out a cooperative peace. Therefore, let us begin now to study the problems of postwar reconstruction. Democracy can and shall win this present contest with totalitarianism. Then will come the great problem of reconstructing the world. Wisdom of statesmen will not be enough to put the world together again on a sound basis. We know under our form of government that democracy can never be wiser than the people it serves.

It is the part of American education to help our citizens, young and old, explore the problems of peace in the modern world of power and swift communication. We have seen what the vocational schools are doing to train skilled hands. We have seen what the engineering universities and colleges have done to train technicians. If we are to move forward, we must meet our new problems with equal effectiveness.

With all of these challenges before us, and perhaps many more which time will not permit me to outline to you this morning, what are we as individuals going to do to meet them, and to combat these forces which threaten our way of life?

I have mentioned that we must be ingenious and ever alert to adapt ourselves to the ever-changing circumstances. That is important, because we know that whatever general formula we now attempt to prescribe it will perhaps not totally cover the problem of tomorrow.

But aside from our efforts as individuals, as individual school boards, and individual groups which comprise our great population, what concerted action can we take which will serve as an impetus to offset

these ills, and give us the machinery to adjust ourselves and tackle the job to be done?

I submit to you that the finest general program that can be launched to face this situation would be the passage of the new Federal aid to education bill which is now pending in the Senate of the United States.

This new bill is designed to abolish educational inequalities throughout our country. If we are to defend ourselves in this country we must do so unitedly. There is no place for favoritism at such a time as this in our national scheme. Think for a minute what a calamity it would be if draftees under our Selective Service Act should be paid $15 per month when recruited from one locality of our country, and say, $90 per month when coming from another. Of course, our national pride would not let us tolerate such a condition. Yes, in just another form those very conditions are being tolerated. It is our intent, therefore, through this legislation to build our educational foundations and to extend our educational base.

Recent decisions of the Supreme Court have so opened the way for this extension that we as educators will be derelict in our duties if we do not assume the new responsibilities presented to us by these decisions. The immediate problems of the dislocation of our school systems caused by the defense program and even earlier to some extent by the problem of our migratory workers is a real burden to our school systems in many areas. In some communities, for instance, the public school facilities are faced with taking care of three times as many children as they had before. As you can well appreciate, this presents an insurmountable problem unless an expansion of school facilities is undertaken.

As Governor McNutt, our Federal Security Administrator, stated: "We can defer building a road, a bridge, or a building, and catch up on its construction later. We cannot put educational opportunity for our children in cold storage for the duration of the war or even of a period of financial stress and restore it later to an unschooled generation grown old. These must go through life a lost generation poisoning the processes of popular thought, political action, economic prosperity, and the national defense with their ignorance, lack of skill, and undisciplined judgments."

As we love freedom, let us work to make freedom possible. We will keep our allegiance to democracy, that form of government suited to free men, only as long as it is efficient to the degree that we develop skill enough to make free men capable and able to run their society and run their own lives, and that ability depends in a large measure on the quality and spread of American education. By making education efficient, we can make democracy work.

America's Last Clear Chance

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an address delivered by me on February 20, 1941, on the subject America's Last Clear Chance.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow countrymen, there is in the law a famous doctrine called the last clear chance. This means that in certain cases the law fixes legal responsibility, say, for an automobile accident, upon the party who had the last clear chance to avoid the injury done and failed to do so. The lend-lease bill now pending before the Senate and nearing passage, happily, could well be described as America's last clear chance to keep war out of the Americas.

Secretary Stimson, in his testimony before the Senate Foreign Relations Committee, in response to a question I asked as to whether this were not our alternative to having this war strike us, used the homely but expressive phrase, "It's the last call for lunch, it seems to me."

The American people do not have to be told any more about the kind of a war this is; about what the objectives of the dictators are; about whether we are menaced by their threats or in the line of their conquest. For the American people already know these things as clearly and have pondered them as deeply as I. The polls of American opinion, the evidences of sentiment which come to Washinton in all of the myriad modern ways, leave us no doubt in our mind as to what the decision of the American people is about this struggle and the degree to which we are affected by it.

With a patriotic singleness of purpose, our people have made up their minds that the heroic British nation and British Navy are the iron bars which alone keep the dictatorial beasts from leaping at us from the Continent of Europe, with the collusion and the collaboration of the lustful and lust-hungry Empire of the Rising Sun. We know that even now, this minute, the Axis Powers in Europe and Asia are set for the spring, their muscles tense, their green eyes intensely watching for the psychological moment to make a universal assault upon our world frontiers.

Imaginative writers, many times, have contemplated some ultimate day when the hundreds of millions of the yellow men would pour down upon the white. History records that dictators out of the east in days past, rode their ponies as far as central Europe, and that more than once the pagan has almost established his mastery over the western world. But this is the first time in history when the powerful nations of the non-English speaking world, Occident and Orient, have thrown their evil lot together to conquer the English-speaking people of the earth. Without quite being aware of it, I am afraid, the English-speaking world now stands with its back to the wall against a hostile non-English-speaking world.

We are no match in a land war for our enemies. The geographical distribution of the English-speaking peoples is such that the only way the enemy can reach us is by obtaining the mastery of the seas. Only, therefore, upon the maintenance of our supremacy on the oceans can we remain secure; can we be safe against their assault. Only by the maintenance of our supremacy upon the seas can we remain world powers, keeping open the sea lanes of world trade, and retaining our contact with one another.

Ours is strategically both a defensive and an offensive position. We want no world territory. We aim at the conquest of no other land or people. We do not want more ground than we have. We do not seek a single resource, however strategic or critical it may be, save in the ordinary and honorable commercial way. We would not if we could, therefore, attack any other country or join issue with any other land power for the mastery of their soil, but we do expect also to be let alone in our lands. We expect others to do unto us as they would have us do unto them. In a military sense, then, the world knows that our only purpose is to act defensively—to save ourselves from any enemy who would come to take our homes away from us.

But in a peaceful sense the logic of our position requires an affirmative strategy. The whole English-speaking world is supported upon the basis of a world-wide relationship. We trade with every country, and all trade with us. We draw our materials, strategic and critical, from the ends of the earth, and we open up our storehouses in fair exchange with the wide world.

In order to maintain this position, therefore, the English-speaking world must keep open the trade routes upon the seas. We must keep the highwayman and brigand from closing those highways or levying tribute upon the travelers, like the highwaymen or the pirates of the past. Moreover, the ports of the world and the markets of the world must not be closed to us. There must be a fair and free opportunity for men to do business with us and for us to do business with the world upon satisfactory terms. There must be, therefore, a medium in which our world business may be carried on and the kind of a world in which honest trade may live. This contemplates, of course, respect for obligation and the pledged word, and the game of business being carried on without either party packing a gun or having a stiletto in his sleeve.

Furthermore, our kind of a world of necessity contemplates for the whole race a free play of ideas, freedom of the mind, and an international science and culture so that each individual or nation shall have its part in moving forward the pegs of human progress

That kind of a world is to the English-speaking people the very oxygen of life. We cannot be what we are and live in a different world.

In a peculiar and a very real sense, therefore, the life of the English-speaking world trembles under the most severe assault in its whole history.

The lease-lend bill is but a part of our national defense. It contemplates the preservation of the most strategic frontiers of the English-speaking world by the maintenance of the British Nation and the British Navy. The integrity of both are imperatively essential to the continuity of the English-speaking world as we now know it. They are the very right arm of our way of life in the world. We cannot alone keep safe our frontiers, even our own, keep open the sea lanes of world trade, determine the character of world currency and commerce and the standards of world morality, assure any possibility of a world culture.

As a matter, therefore, of the strictest national security, upon the age-old principle of self-defense, we are resolved to put every possible weapon in the hands of our heroic brethren of the English-speaking world; to give them all possible moral support, to strengthen the sinews of their resistance in every way within the genius and enterprises of our own power. We have chosen this bill as the method by which that shall be accomplished.

The Congress lays down the policy and the President executes that policy. The details—the manner in which British purchases are coordinated with our own acquisitions; the circumstances under which our yards become places of repair for British ships; the instances which require the communication of secret information, which is a necessary part of certain weapons we may sell; the terms and the conditions upon which the British may buy and the character and quantity of the consideration to be paid by them, when conditions may require that we let them have some of our own accumulated materials. All these are of course put in the only hands

in which they could be handled—the hands of the President.

But the policy remains in the hands of the Congress where it should be. It is the Congress which confers the powers granted by the bill. It is the Congress which by the clear provisions of the bill may take them back by a simple majority vote at any time. It is the Congress which limits the quantity of materials on hand of which the President may dispose and appropriates every dollar that may make possible any new materials to be sold and every penny of any contract for materials into which the President may enter.

To appease the critics and the skeptical we have even expressly stated what everyone knew anyhow, that the bill conferred no new power upon the President to convoy our ships and gave no authority for American merchant vessels to enter zones of warfare. And as a further concession the bill expressly recites what everyone knows would have happened anyway, that before the President disposes of any materials we have on hand he must consult with the Chief of Staff of the Army or the Chief of Operations of the Navy, or both.

Where, then, is this dangerous weakening of our own defense that some feign to see? For every student of modern warfare knows that it is not what a nation has on hand that so much determines its strength in materials as what its industrial system is geared to produce. Long ago when we proposed to lift the arms embargo some said that that would weaken our own defense, but we know that factories established with Allied funds, the industries brought into high productive efficiency with Allied purchases have given us a flow of materials available at any time for our own use, partially or completely, which immeasurably magnifies our strength.

Of course, weapons are most needed at the front, which is under the most severe attack. So long as the heroic British air force and the British Navy live in their virile strength, Hitler is too much occupied in Europe to be able to do much about us. But let them fall or, what is possible in this queer world, let them be added to the strength against us, and all that we have let them have, all that we possess, and all that we could make would not begin to be enough.

Where is this fancied dictatorship, when the Congress holds the reins of the power it has conferred, while the President carries the load like a willing horse? What executive has ever achieved tyranny when the people's representatives held the purse strings for every dollar spent? Of course, there are some who think that if a free people become strong they have lost their freedom. I venture to say that, on the contrary, in this day only by becoming strong can a free people retain their freedom.

In the World War, in the Civil War, in every great emergency we have ever had, the Congress conferred upon the Executive the power necessary to meet the emergency; and when the emergency passed, the Congress and the people reclaimed the power without the loss of a single civil liberty.

It is a bad time for democracy to lose confidence in itself and to become suspicious of its own prerogatives. Never more than now did conditions demand that democracy clear its decks for action—bold, intelligent, effective action. The dictators have no division in their strength; no disunity in their attack. A free people must not be coerced into unity and dragged into compliance. They must come eagerly together in common council and in common concert, chart their course, charge their leaders, coordinate their efforts, and so build a single spirit of unity and resistance that e pluribus unum becomes a fact and not a slogan.

In a new spirit let us hasten on together like a well-disciplined athlete to our place in the hard-pressed ranks of freemen.

Against Involvement in War

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at a mass meeting of the American Mothers of Massachusetts in Boston Commons on Sunday, May 11, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A century and a half ago our forefathers stood here in Massachusetts on Bunker Hill and successfully demonstrated their determination to defend our Nation against the aggression of a great European power. To the powers of Europe they said, "We of America are united in defense. We want no part of European imperialism and constant war making, and we tell you to stay on your own side of the Atlantic Ocean."

Today you are gathered here in Boston Common to demonstrate your determination that this Nation shall be united for defense against any European power that should be so foolhardy as to attempt to trespass on American soil, and to demonstrate your determination that we shall not lose our democracy on the home front by launching ourselves into the long-drawn-out, costly struggle now raging in Europe, Asia, and Africa.

There are those who say that this policy is a policy of appeasement. Our forefathers did not regard that policy as such. Our forefathers did not participate in wars all over the world at the request of the British Empire. They did not join the Spanish armada against Great Britain, or the British fleet against Spain, but, whenever either of those countries came to attack us, our forefathers successfully defended America against them. We can do it again and again and again if necessary. And that goes for Hitler.

In the few years before the European war broke out Great Britain contributed to the rearmament program of Hitler to the tune of $3,000,000,000, and at a time when she was repudiating her debt to America. Now she is spending her millions in this country in a gigantic propaganda effort to sell us on the proposition that we can benefit by going through the same steps that we did when we went into the last war.

There are those in this country who seek to intimidate the American people by saying that we cannot defend ourselves against Hitler if he ever is so rash as to attempt to cross not the English Channel, but the whole Atlantic Ocean in an endeavor to conquer us. With trembling voices they suggest that Hitler might be able to conquer America if he is successful in conquering Great Britain and, overcoming the obstacles of famine and disease and economic ruin which will inevitably follow in the path of the European war, overcome a tremendous "fifth column" against him in the conquered countries of Europe, be able to hold these people down and at the same time, leaving a suspicious Russia at his back door, start out on a costly venture to cross the ocean in a doubtful attempt to conquer a well-defended, well-equipped powerful Nation of 130,000,000 indomitable, red-blooded Americans.

To these defeatists I say that we of America are 130,000,000 strong with an indomitable will to defend the home front, with a productive capacity greater than that of all Europe combined. To these defeatists I say that we can and will build up our Army and Navy and productive capacity to such an extent that no nation or combination of nations will dare to set foot on the Western Hemisphere. To these defeatists I say that if that attempt is ever made, we of America will fight as a united people.

Since I introduced the resolution against convoys I have received more than 19,000 letters from all over the country. More than 95 percent of these people are unalterably opposed to any attempt by the President to break his pledge to the American people. These letters come from people in all walks of life. Most of them are the plain people of America. All of them express a unity for national defense.

One of these comes from one who has been working for years with the young people of the country, and I believe that he expresses their sentiments when he writes:

"DEAR SENATOR TOBEY: Let me thank you personally for your commendable efforts to keep the United States out of further involvement in the European conflagration. Please carry on. Our people must see the light before it is too late. I wish I could aid and encourage you in this vital endeavor, but I am afraid that my powers in that respect are very limited.

"Without questioning the conscientiousness or patriotism of those who think otherwise, I am one of the millions of individuals who believe that it will be a deadly, tragic, foolhardy, impracticable, and possibly suicidal blunder if the United States becomes actively engaged in the European holocaust, even to the extent of convoying war materials. The theory that we can engage in this war to a limited extent is ridiculous and inconsistent with the lessons of history and the processes of human nature. An attempt to do so will promptly engulf us to the limits of manpower and material resources in a struggle which, in all probability, will last for years and lead to nothing but terror, butchery, impoverishment, and the near extermination of everyone concerned.

"Our leaders have no right to gamble further with the lifeblood and, indeed, the very existence of our Nation. Let us arm America to the teeth and defend our own hemisphere to the death, but, in order to do so, let us conserve our resources for these purposes instead of dissipating them all over the face of the globe in a mad and fantastic crusade to police and reform the world. The American people do not want to enter this war.

"Yours sincerely,

"CARL B. SNAVELY,

"Coach of Football, Cornell University."

He who has for years been building up the character of young American manhood knows their thoughts.

Another letter received only yesterday is from a young man serving in the United States Army, and reads as follows:

"I was conscripted on Thursday last and, temporarily assigned to Camp Upton. I have made it a point to converse with men who are fellow 'draftees.' I find they are all agreed on this one salient point. They realize it is their sacred duty to defend the United States, but they are emphatically opposed to being flung to the far corners of the earth to defend the British Empire and foist democracy on people who never had it and who never wanted it. The men whom I have talked to all feel thankful that we have leaders in the Congress who are taking an active part as advocators of no convoys and no

A. E. F. Please continue your fight for truth against the small minority that controls the powerful instruments of propaganda in this country. Please don't fail us. Don't let us boys down in this crucial moment.

"Sincerely yours,

"JAMES J. LEDWITH,
"Camp Upton, Long Island."

The final letter I read to you is from a World War veteran.

"DEAR SENATOR TOBEY: May the mighty God bless you men who are fighting to defend the people of the country against the warmongers who are pushing us into the carnage of hell now raging in Europe. I am one of the boys who fought for democracy in the freedom of small nations in the A. E. F., 1917–19. What a joke. I was wounded and in the dead pile for about 9 hours until I was able to drag myself along the ground back to a dressing station. All for democracy, of course. Isn't it too bad that the warmongers could not have a little real war experience in the front line after zero hour. I often wonder how men of your type feel about those supposed-to-be Americans who are always ready to put the welfare and prosperity of a foreign empire above our own beloved America.

"Yours sincerely,

"JOHN NEVILLE,
"The Bronx, New York."

Fellow Americans, there is abundant evidence that the people of America are overwhelmingly opposed to our being launched into the war. Today you have turned out in thousands to demonstrate this. This mass meeting, under the sponsorship of the American Mothers, is but one of similar Mother's Day meetings being held in the larger cities throughout the country. The Mothers of America are being organized for effective work to let the President and the Congress know in no uncertain terms that they intend to hold him to his oft-repeated pledges to keep the people of America out of the war.

I now raise a question which I know is on your hearts, and when I have stated the question let me hear your answer. The question is this, and I hope that the President is listening to this broadcast: Is it fair and honest to the people of America for the President to broadcast to the millions of citizens just before election, I quote, "I have said this before, but I shall say it again and again, and again, your boys are not going to be sent to any foreign war.", end of quotation. And then, after the people have acted upon his assurance and had their hopes built up, to plunge them into the war? I ask you that question. Give the President your answer.

I say that the American people are going to hold the President to his promises.

Only a few days ago an administration spokesman stood on his feet in the Congress and said that there is an overwhelming cry in the country for convoys, despite the statement of the President that convoys mean shooting and shooting means war. Where does this cry come from? Does it come from the farmers of the soil? Does it come from the workmen in the shops? Does it come from the homes of America? No; it does not. Rather it comes from the propaganda mills of the British Empire.

And speaking of convoying, the President's spokesmen in the House and Senate urged passage of the lend-lease bill on the grounds that it was the best means of keeping the United States out of the war. Since they have achieved their purpose in getting the bill passed, they have cried out that we must convoy in order to get our lend-lease goods to the shores of Britain, despite the statement of the President that convoys mean shooting and shooting means war for the American people. And in making this appeal they have said that 40 percent of the ships carrying our lend-lease goods are being sunk on the Atlantic Ocean.

This past Wednesday, Senator VANDENBERG, of Michigan, placed in the CONGRESSIONAL RECORD an official letter which he had received from Admiral Land, Chief of the Maritime Commission, which advised that during January, February, and March of this year, 205 vessels cleared from the United States to Great Britain, and of this 205 only 8, or 4 percent, were sunk.

These official figures were available to the President and to his Cabinet members, and yet for the past several weeks they have concealed them from the people while their spokesmen have been urging convoys. Why has not the President been frank and honest with the people on this issue?

In September 1939, in a broadcast to the millions of Americans, the President said, "You are, I believe, the most enlightened and best-informed people in all the world at this moment. You are subjected to no censorship of news, and I want to add that your Government has no information that it has any thoughts of withholding from you."

Words, words, words, meaningless words, coming from the lips of the President of the United States. The American people are not children. They have been promised the truth. Why was it not given to them? This situation about the withholding of the true figures on ship sinkings reveals the means they have been using to steal the minds of the American people in this matter of war or peace.

First they said we should lend, lease, and give the goods to England. Now they say that it is useless to lend, lease, and give our vital war materials to England if they are to be sunk en route, and that we therefore must go a step further and convoy. If they get away with that, the next argument will be that it is no use getting the war materials to England if there are not sufficient men there to use them, and that therefore we must send our American boys to the British Isles to man the weapons.

In its fight to launch the American people into the war against their will the administration is adopting means which are breaking down democracy here in America—methods which are undermining the faith of the American people in their own government, methods which are denying to the American people one of the very freedoms that the President professes he will enforce everywhere in the world. I refer specifically to the freedom of speech. But what the President insists upon is a one-way freedom of speech. A one-way freedom of speech is not freedom, it is not American, it is not democratic. If the people of America must first find out what is in the mind of the President and then speak his mind and nothing else, what are we to claim as a distinction between our brand of dictatorship and that of Hitler?

Let the administration's spokesmen mislead the American people on the amount of ship losses and you have what the administration calls "freedom of speech"; but let Col. Charles A. Lindbergh speak his honest convictions and give the facts that he knows and you have what the President calls the remarks of a "Copperhead."

This past Friday, on the Senate floor, I made an address in which I referred to a report of April 29th by the United Press which quoted in part the remarks of Senator PEPPER, of Florida, when he made an address to a regional conference of southern Democratic women leaders. The following statement of Senator PEPPER was read on the floor of the Senate, I quote "The people of the country have kept the Congress from impeaching the President for what he has already done in connection with the European war." To my knowledge, this is the first time that an administration member of the United States Senate has publicly stated that the Congress has a desire to impeach the President for his activities in connection with the European war. What was on the mind of Senator PEPPER when he made that interesting observation? The United Press further quoted the Senator from Florida, as follows: I quote, "Congress is paralyzed. It doesn't know what to do. It is afraid of what it must do."

Fellow Americans, I am not as much of an expert as Senator PEPPER on the question of the attitude of Congress on the subject of impeachment of the President because of what he has done in connection with the European war, but I do know this: That the millions of plain American people, by their letters to the President and to the Congress, have been an effective check-rein on the administration which is bent on launching us into the war.

It is time for the leaders of this Nation to build up the Army and Navy for defense of this hemisphere. The warmongers say that the people of America are too weak to defend this hemisphere. I say that the American people can match Hitler plane for plane and ship for ship and that the American people can and will successfully defend this hemisphere if Hitler ever dares to attempt to set foot over here. That would call for sacrifice and hard work but our pioneers are proof that the American people, as a unit, can overcome any obstacle on the home front when there is a task to be performed.

A man who saw active naval service during the World War and who is still in the Navy recently wrote to me and said, I quote, "I am too much of an American ever to say as the warmongers do that the British Fleet has been protecting our shores for over 100 years. What an insult to us boys of the Navy. There is only one Navy that ever did or ever will protect our shores and that is the American Navy."

Fellow citizens, I deplore the defeatist attitude of the interventionists who say that America cannot defend this hemisphere.

It has come to be an aphorism that the only lesson we learn from experience is that we learn nothing from experience. Back in 1917 the propagandists sold us on the argument that, regardless of the cost in money and lakes of blood, that would be a war to end wars (which it was not), that by our participation we would make the world safe for democracy and that the European countries would be forever grateful to the people of the United States for our participation. We went the whole way—billions of dollars were spent and the American people were taxed to repay those billions. Thousands of casualties resulted and we brought upon ourselves a terrific depression which resulted in long relief lines and unemployment.

If the warmongers are successful we will enter into a long-drawn-out struggle. Great Britain has an army of approximately two and one-half million men. Germany alone has an army of six and one-half million men. The military experts are agreed that a physical invasion of Europe would have to be made to accomplish the defeat of Hitler. The extra men to support the British Army would have to come from the homes of America. It would require an expeditionary force many times greater than the one we sent to Europe in 1917 and under much greater hazards. The cost in bloodshed, money and privation, and years of struggle would be immeasurable. Let it be remembered that once we get into the war, we will have to fight to the very end. Let it be remembered that war cannot be repealed; that bankruptcy cannot be repealed and that the dead cannot return home.

After the war is over, whether we are victorious or unsuccessful in our venture, there will be nothing left but poverty and ruin,

famine and disease. Then there will be a movement in all of the ruined nations for an enforced program of sharing the poverty equally, some degenerated form of communism to be based on general ruin and general despair. The war-gutted nations will not be able to resist such a movement after having shot away their very substance.

I have been severely criticized by some for not throwing my influence behind the drive for intervention. In taking my stand against involvement I am acting in accordance with my honest convictions, and no man should be asked to do otherwise.

A short time ago I received a letter from a professor at Dartmouth College which said: "I am surprised that you do not follow such intellectual leaders as President Hopkins, of Dartmouth, and Conant, of Harvard." I replied as follows: "Why don't you follow the intellectual leadership of such men as President McCracken, of Vassar College, President Hutchins, of the University of Chicago, and such spiritual leadership as that of William Cardinal O'Connell and Harry Emerson Fosdick?"

Only a few months ago a thoughtful appeal was made by William Henry Chamberlin, correspondent in Europe and Asia for the Christian Science Monitor since 1922, who said: "Let America's destiny be to keep bright the flame of civilization which was lit in Europe and which is now apparently going out there. Let us keep clear of adventurous crusades, which, after wasting our lives and property, will inevitably end in futility and disillusionment. Let us be strong for the preservation of peace in our own hemisphere, in the regions where we can reasonably hope to make our military, naval, and economic strength decisive. Let us shut our ears to the barrage of conscious and unconscious propaganda that will play on us with increasing force as Europe's death gamble becomes more and more desperate. Let us remember that by every Christian, democratic standard every individual American life is sacred and precious, to be sacrificed only if our own security is threatened; not to be thrown away in the interest of foreign powers. And let us never forget that the surest road to fascism, to communism, to every form of the brutalitarian state is through war."

Fellow citizens, make no mistake about it, the interventionists from the President's Cabinet on down have picked out the foreign fields on which the young manhood of America will die. They will be sent to die in Europe, in Africa, in eastern and western Asia, in the extremities of the Pacific Ocean, in every part of the Atlantic Ocean, in the Mediterranean and Red Seas, in the Suez Canal, in the Adriatic and Caspian Seas, in the Dardanelles and Bosporus Straits, in the Strait of Gibraltar, in the English Channel, in the North Sea, the Baltic Sea, and in the Indian Ocean, far, far away from America. This, in the name of defense.

If you have any doubt of the President's designs listen to the words of William Cardinal O'Connell. I quote, "I hope that this country stays out of war. I know the people want to stay out but the Government seems to ignore their wishes while still talking of democracy. * * * The trust of the people in their Government is a dangerous thing to toy with. There is a distinct feeling that things are going on behind the scenes unknown to the people. This is a sort of distrust that brought about revolution in Europe, the distrust of the people in their governments."

Cardinal O'Connell's views were reechoed only a few days ago by Archbishop Michael J. Curley, of Baltimore and Washington, who said, "I predict that our economic structure will collapse and that inflation will come to this country just as surely as it came to Germany if we get into this war.

"War is not glorious. Wars are not fought by men in swivel chairs. It is the common people who are dying today, who are suffering, and being blown to bits. * * * A fearful pressure is being brought to bear upon our country to send our vessels to Europe. What I don't like to see coming is our boys manning ships to fight and go down to the bottom of the ocean. * * *

"We gained nothing in the last war. Nor did we make the world safe for democracy. We only helped lay the foundation for future wars."

On this day, which is being observed throughout the Nation, I appeal to you to join in the Nation-wide movement of the people of America in opposition to our entering the war. I know that everyone here joins with me in the prayer that our next Mother's Day will not be a day of heartache and sorrow. In joining with this movement against involvement in the war you are in the company of millions of your fellow Americans. Were it not for the letters you are writing every day to your Senators and Representatives in the Congress and to the President the youth of our country would already be on their way to the far seas and to the foreign soil of Asia, Africa, and Europe.

Next week, in the Senate, I shall introduce my anticonvoy resolution as an amendment to the ship-seizure bill and will demand a roll-call vote in order that the people of America will have an opportunity to know which of their Representatives in the Senate are willing to disregard the will of the people on an issue which is a matter of life or death to the American boys. I measure my words when I say that the vote on that anticonvoy amendment will be a war vote. It will be a vote to decide whether the United States shall enter the war or stay out.

Your Senator WALSH has a long and consistent record against involvement in the war. I am advised that your Senator LODGE has expressed himself as opposed to convoys. I know that you will not fail to express your appreciation to your Senators and will not fail to let your Congressmen know how you, the people, feel on this crucial issue.

Do you, the people, want war? Listen to the words of Senator D. WORTH CLARK who, in an historic address on the floor of the United States Senate, said, "People of America, all of you will love war at first, but when the heartless shells begin to scatter the bodies of your boys amidst the yellow mud of some European or Asiatic battlefield, you will not love it quite so much. When the long streams of coffins start to roll into your homes, if there is anything left to put in coffins, then you will know something about the love of war. When the crippled and the maimed and the insane begin once more to fill new and hungry hospitals, and you have to close your eyes rather than look upon the horror of the thing, then you will have some idea of war. And when for the next 100 years you and your children and your children's children begin to toil and sweat and grub to pay back the billions and billions which are being so carelessly tossed away to preserve the financial and the far-flung empires of the world, then you will not like war. When the democracy which you sought to save abroad has vanished at home, when the freedoms of today are but misty memories, when the Government has taken over the railroads, the radio, the utilities, the newspapers, and other forms of public expression; when labor is conscripted and the farmers regimented, then, people of America, you may, amidst your blood and your tears, have some faint glimpse of modern war. What a ghastly hangover it will be."

South Atlantic Defense

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

ARTICLE BY GEN. DAVID P. BARROWS

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "South Atlantic Defense," written by former President David P. Barrows, of the University of California. Dr. Barrows is also major general of the Army of the United States, retired. He has been both my general and my university president. I am proud to be able to say that.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the California Monthly of May 1941]

SOUTH ATLANTIC DEFENSE

DR. DAVID P. BARROWS [1] EXPLAINS WHY DAKAR IS VITAL TO AMERICA

In their concern over the progress of the World War and of the future defense of this country, the American people are overlooking the importance of the South Atlantic Ocean. The points of present strain and danger are, first, the lines of communication across the North Atlantic, the lines on which American commerce has mainly rested, the lines which give us as a people the closest ties with nations of common heritage and common culture, the lines that are essential if Great Britain is to continue to be the main opponent of the Axis revolution; the second dangerous situation which absorbs anxious attention is the eastern Mediterranean; and the third is the South China Sea and Malaysia. While American interests and American safety depend upon British military success in all of these theaters of operation, there is another area vital to our policy if we are effectively to defend the southern continent of this hemisphere.

This hemispheric defense has now become a settled resolution, perhaps the most important and definite resolution, in the American mind. Its defense is not an easy problem, or at least will not be an easy problem if the Axis Powers consolidate their European victory. The great effort which the German armed forces, together with the Italian, are now making to destroy British resistance in the eastern Mediterranean necessarily suspends active operations at the other or western end of this great sea. But if Great Britain can be shattered in the

[1] The author, David Prescott Barrows, 1895, professor of political science and chairman of the department at Berkeley, needs no introduction to readers of California Monthly because for a number of years he conducted The World We Live In, a monthly department of comment on world affairs. Dr. Barrows is particularly well informed in matters military, for he is State commander and major general, retired, of the California National Guard.

Aegean and driven from Egypt, the next offensive blow may be at the other end of the Mediterranean directed against the Straits of Gibraltar, the seizure of the French protectorate over Morocco and the west coast of Africa. There is reason to believe, now, that the main and final blow against Great Britain by German force will not be undertaken until England is entirely cut off from her overseas allies and supplies. To do this, German might must not only effectually cripple the transport of the North Atlantic and extinguish all British movement through the Mediterranean and the Red Sea, but must also threaten, if not destroy, the sea transport around the Cape of Good Hope into the Indian Ocean and to Australasia. This would make effectual the complete blockade of Great Britain.

Under certain circumstances this action may become the easiest adventure upon which Hitler's strategy has yet ventured. The special circumstances which would make it easy are two. First, a collapse of the resistance of the government at Vichy to giving the Axis military assistance. We do not know how close this collapse may be. We are told that the policy in the minds of Admiral Darlan, of Pierre Laval, and of others who share their position, is one of full cooperation with Germany "short of war." They seem convinced of the inevitability of British defeat, German triumph, and a recovery of French nationality only through the benevolence of Hitler. Marshal Petain has stood out stoutly and gallantly for observance of the French-German armistice conditions, which delivered France from the humiliation of aiding in the warfare against her late ally, Great Britain, but Petain may be undermined and silenced. The attitude of General Weygand, who commands the French forces in Algeria and Morocco, is undisclosed, but it is pretty evident what Hitler is trying to secure from France, and if he can secure French North Africa and French West Africa, the consolidation of German power on the north and west coasts of this continent should be relatively easy, provided that, as a second circumstance, the American people were to remain indifferent to his undertaking.

The westernmost point of Africa is Cape Verde, discovered and named by the Portuguese long before the voyage of Columbus. Immediately under this cape lies the important town and harbor of Dakar. It is perhaps the best and most important commercial harbor on the west coast of Africa. It has great fueling facilities for the four steamship lanes that converge upon it from the British Channel, from the eastern coast of the United States, from the Rio La Plata and Rio de Janeiro, and from Cape Town.

Dakar has grown into a great port of export and of call. The French have added in recent years to its development as a harbor, but in addition to its commercial importance, Dakar has a strategic value of the greatest interest to the American people. It is the closest port or possible naval base and air base to the American Hemisphere. It is the starting point for all judicious air flights across the South Atlantic to South America. Dakar, and indeed the whole of the vast governor-generalcy of French West Africa, is in the hands of officials and forces subservient to the Government at Vichy. Some months ago British naval vessels attempted to land at Dakar a Free French force under General de Gaulle, who apparently had been deceived into the belief that he and his corps would receive there a friendly welcome. They were met by gunfire which damaged at least one British fighting ship and drove the convoy party away from their undertaking. This hostile and decisive fire seems to have been generally attributed to French war vessels in the harbor at Dakar, but I think there was another factor of importance in the British repulse—namely, the island of Goree.

The writer spent a week in Dakar years ago when entering Africa on a visit to Timbuctoo, and he visited this citadel. May I be permitted to quote from the account of that African trip, Berbers and Blacks:

"The famous island of Goree is only a thousand meters long. It is quite solidly built over by substantial houses with long galleries and arcades and by fortifications that date from the past centuries when Goree's importance was notable. Toward the sea the island rises in a bluff, with steep descending cliffs upon which the surf breaks endlessly. At this high end of the island is the famous fortress of St. Michel. It is a well-equipped coast defense, and is garrisoned by a small detachment of French artillerists. At the foot of the bluff, mingled with the rocks and seaweed, I counted no less than 14 ancient iron cannon, with their discarded gun carriages. They were really of great size and with calibers of perhaps 8 inches. They had been tumbled over the precipice to make place for modern armament in this fortress which had guarded the settlement for centuries."

It is to be presumed that it was heavy gunfire from this citadel of St. Michel that repelled the British ships and de Gaulle's expedition. If German engineers secure possession of this point they can mount defensive fortifications on Goree and on the contiguous mainland around Dakar that might well make this locality as impregnable as the island of Helgoland.

In the writer's own mind there is no doubt but that this is a part of the Axis plan of world domination, for here could be created an indestructible naval base, and behind this port is an unlimited area adapted to air bases. A map and a pair of calipers will demonstrate to anyone how such a sea and air base would dominate the great eastern projection of South America and the coast of Brazil, all of which are within the radius of effective action of not only a naval fleet but of present-day air bombers.

However, this is not quite all. Off this coast of Africa and still closer to South America is the Portuguese possession of the Cape Verde Islands. This wind-swept, rather desolate archipelago, inhabited largely by colored folk, contains, nevertheless, what I think neither the Canary Islands nor even the Azores possess—namely, deep harbors, capable of forming bases for battle fleets. The best of these harbors seems to be that of Sao Vicente. If this country intends to maintain the protection that it already has declared over South America, it must never allow Dakar or the Cape Verde Islands to come into the possession of a power that we fear.

The effective protection of the South Atlantic depends upon two things—both of them in American possession: First, a powerful naval and air base somewhere on the eastern projection of Brazil; and, second, bases, both at Dakar and the Cape Verde Islands, capable of resisting hostile attacks from an aggressive enemy.

This matter at any time may become an urgent one. If we act in time, the south Atlantic and the Southern Hemisphere will be secure. Our military need may not be a series of fortified bases all along the coasts of South America. This probably would be unnecessary, and it would certainly be impolitic. For even if the people of these South American countries should permit us to spend money for their defense, such fortifications in our hands eventually would be regarded as so many little Gibraltars. One single base on the east coast of Brazil would presumably secure the whole, if balanced by something comparable on the West Coast of Africa.

These two points from which action could be taken would threaten any hostile force moving into this part of the ocean. If, however, raiding vessels got through this powerful oceanic line of defense and a more southerly base of operations were required, this could doubtless be obtained from the British in the Falkland Islands. These latter islands lie off the coast of Argentina and were probably secured by the British something over a hundred years ago, because, equipped with sea power, they control the Cape Horn route and the Straits of Magellan. It will be recalled that here, in the opening months of the World War, the German fleet, under Admiral von Spee, having annihilated the British Pacific squadron off the coast of Chile, met the fleet that had been promptly dispatched from Great Britain to the Falklands, and which annihilated the fleet of von Spee.

These seem to the writer to be the essential elements in the defense of the South Atlantic and the protection of South America from Axis disintegration and conquest. With all the regard and affection that can be felt for these South American republics, they are, nevertheless, a set-up for the propaganda, the intrusion, and ultimate control of the Hitler movement. They can be secured, one by one, and, if undefended, will be, until the menace of German power overhangs the Caribbean.

The American people find themselves in a new situation, a situation in which are gone the old defense mechanisms which happily protected us for so long—the European balance of power and the predominance in the Atlantic of the fleet of a country that had ceased to compete with us for political influence in the New World, namely, Great Britain. As a people we have yet to learn to think straightforwardly about our situation and to develop the will to act quickly and decisively in the face of danger which already menaces us but can still be controlled.

The War Situation

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

CORRESPONDENCE WITH HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Alfred E. Stearns, headmaster emeritus of Phillips Academy, Andover, Mass., and my reply thereto.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AN OPEN LETTER

INTERNATIONAL EDUCATION COUNCIL, INC.,
New York City, May 2, 1941.

Hon. CHARLES W. TOBEY,
United States Senate Chambers,
Washington, D. C.

DEAR SENATOR TOBEY: As an old friend, and one who for many years has valued highly that friendship and who has always held you in the highest esteem, it hurts a bit to write you what I feel compelled to say at this critical time.

Your deep interest in youth and its problems early touched a responsive cord in my heart. The confidence you reposed in me when you were Governor of New Hampshire

is still a prized memory. You will forgive me, then, I am sure, and in view of the added fact that however strongly I must disagree with you at this time, I do not now question any more than I have done in the past your absolute sincerity.

To me, it is simply inconceivable that any thoughtful man can fail to realize that whether we desire it or not the present World War is our war as much as it is that of England and her few remaining Allies. My deep regret is that we did not long ago frankly admit this fact and take our stand openly where we properly belong. Such an act on our part would have meant infinitely more to a stricken world, and perhaps even more to our own country. And it would doubtless have saved, as well, untold human suffering and countless human lives. Hide our heads as we may, we cannot escape this hideous octopus which even now is extending its sticky tentacles to this hemisphere. To restrict in any way our aid to England at this critical moment, when that brave country faces exhaustion, and the result of its heroic sacrifices for us as well as for itself seems to me the extreme of blind folly and ignorance. The question of whether or not we send our boys outside of this country is wholly beside the point. The real question is whether or not we propose to take our proper part in this titanic struggle where the issues between right and wrong, truth and falsehood, decency and brutality, spiritual idealism and avowed godlessness are more clearly drawn than they have ever been before in the world's long history; where brute force deliberately undertakes to destroy all those spiritual values in life which we have come to place above everything else, and by which alone man is able to rise to those levels for which his Creator bids him strive. That question calls for but one answer. Further, whatever we do now can only mean the lessening of those sacrifices in both blood and treasure which sooner or later we must inevitably face. We gain nothing by delay—more likely, we shall lose all.

A loather of war and all it stands for myself, my keenest regret today is that age does not permit me to offer my services and my life, if necessary, to those who still retain spiritual vision and who realize that there are things in life far worse than death itself. That alone would satisfy my conscience—and I still accept my conscience as the voice of God. If this world is to become subject to the hideous and brutal standards which the present rulers of Germany announce frankly as their own, death would be a welcome alternative. And that those standards are bound to prevail unless we take our stand promptly and without reservation at the side of England in this critical moment there can be no shadow of doubt. In God's name, then, why this terrible delay?

If I seem to be speaking strongly, I can only say that my feelings are much stronger than anything I can put into words. At the moment, every word you utter in your responsible position is eagerly awaited and enthusiastically acclaimed by Hitler and his lust-maddened followers. For years you, as a high-minded and public-spirited citizen, and I, as a headmaster, strove to inculcate in youth those high standards of Christian morality and conduct, truth and honor, justice and tolerance, which we know to be the very basis of sound character and manhood. Today, you extend your aid and offer encouragement to those who openly repudiate these same standards and who have deliberately brought up a whole generation of fanatical German youth to believe that these are the clear evidences of weakness and incompetence. How possibly can all this be if the position you advocate is as sound and patriotic as you believe it to be?

To me, this just does not make sense. If a year hence or earlier perhaps, for events are moving swiftly, the situation indicates that my reasoning is wrong and yours is right, I shall gladly admit my error. Would to God I could force myself to believe that an opportunity to do this might ever be mine.

Yours very sincerely,

ALFRED E. STEARNS,
Headmaster Emeritus, Phillips Academy, Andover, Mass.

P. S.—By curious coincidence, and since I began this letter, tickets of admission have been handed me for a discussion in which you are to take part, scheduled for May 6, here in New York City. Frankly, since I am convinced that this matter long ago passed outside the realms of proper discussion, I shall not have the heart to attend.

A. E. S.

MAY 10, 1941.

ALFRED E. STEARNS, Esq.,
International Educational Council, Inc., New York City.

DEAR MR. STEARNS: On May 3 I received your letter of May 2, which I know expresses your sincere views.

On May 4 I read the newspaper reports of the press release which you made in connection with your letter to me, which advised that you, as an old friend of mine, had "rebuked the Senator for his opposition to American convoys."

It is a part of my job to take rebukes, and when such is occasioned by my stand on an issue which I believe in as sincerely as I do the antiwar issue, I welcome straight-from-the-shoulder open criticism, whether it is favorable or unfavorable. America was built up on the principle of free exchange of thought, and I am glad to make a frank and full reply to your letter.

You state that "the present war is our war." If I felt that it was, I would favor immediate participation. However, after long and conscientious study of the issues involved, I am strongly of the opinion that it is not our war, and that it would be an immeasurable calamity for us to follow the same steps that we did in 1917, succeeded by disillusionment and regret.

Very little has been mentioned in the press about the Duesseldorf conference, which immediately preceded the present war. While it was in progress the British papers had much to say about it. It was nothing less than a British-Nazi conspiracy to enter into a trade-pooling agreement for the purpose of fleecing us of our South American trade.

In the few years before the European war broke out Great Britain contributed to the rearmament program of Hitler to the tune of $3,000,000,000, and at a time when she was repudiating her debt to America. Now she is spending her millions in this country in a gigantic propaganda effort to sell us on the proposition that we can benefit by going through the same steps that we did when we went into the last war.

It is acknowledged that if we get into the war we will be financing Great Britain's as well as our own prosecution of the war. If it lasts 3 or 4 years, our national debt will have run beyond the two-hundred-billion mark. Inflation will have become inevitable.

Before the present war broke out Chief Justice Hughes advised that he had grave doubts that we could survive as a democracy if we entered the war.

I recognize that if Germany conquers England we in the United States would have to make great sacrifices to continue to build up our Army and naval forces for protection of our hemisphere. At the same time I feel that it can be done, and that the detriment to this country, as weighed against the detriment if we go into the war, will be far less. Hitlerism cannot remain a permanent thing. In time the people of Europe will come into their own again.

You say in your letter that the question of whether or not we send our boys outside of this country is wholly beside the point. On this I wholly disagree with you, and my reason for this involves a matter of common honesty with the American people.

I refer to the fact that when the conscription bill was passed last fall (and incidentally it had my favorable vote) it contained an assurance to the mothers and youth of the country that none of the conscriptees would be drafted for purposes of fighting on foreign soil.

Just before the election the President, in an appeal for support, broadcast to the millions of Americans the following solemn pledge: "I have said this before, but I shall say it again and again, and again, your boys are not going to be sent to any foreign war." How can it be suggested that it is wholly beside the point whether or not we send our boys outside of this country in the light of these assurances?

It must be recognized that a Member of the Congress, in voting on this issue, has to consider it not from how it will affect him but from how it will affect the great mass of the American people, in this particular case, how it will affect the millions of young American manhood who have received solemn promises from the Government.

Only 2 days ago I received a letter from a young man who is in the Army. I am compelled to consider his views and cannot for a moment, in good conscience, say that whether he and his comrades are sent outside the country is "wholly beside the point." He writes as follows:

"I was conscripted on Thursday last and temporarily assigned to Camp Upton. I have made it a point to converse with men who are fellow draftees. I find they are all agreed on this one salient point. They realize it is their sacred duty to defend the United States, but they are emphatically opposed to being flung to the far corners of the earth to defend the British Empire and foist democracy on people who never had it and who never wanted it. The men whom I have talked to all feel thankful that we have leaders in our Congress who are taking an active part as advocators of no convoys and no A. E. F. Please continue your fight for truth against the small minority that controls the powerful instruments of propaganda in this country. Please don't fail us. Don't let us boys down in this crucial moment."

You further state that my deep interest in youth and its problems early touched a responsive chord in your heart. I am determined that my interest in youth and its problems shall continue to be foremost in my heart, and in connection with this I commend to you the testimony of one who for years has been building up the character of young American manhood, and knows their thoughts. I refer to a letter which I received just the other day from Carl B. Snavely, coach of football of Cornell University.

He wrote as follows:

"DEAR SENATOR TOBEY: Let me thank you personally for your commendable efforts to keep the United States out of further involvement in the European conflagration. Please carry on. Our people must see the light before it is too late. I wish I could aid and encourage you in this vital endeavor, but I am afraid that my powers in that respect are very limited.

"Without questioning the conscientiousness of patriotism of those who think otherwise, I am one of the millions of individuals who believe that it will be a deadly, tragic, foolhardy, impracticable, and possibly suicidal blunder if the United States becomes actively engaged in the European holocaust, even to the extent of convoying war materials. The theory that we can engage in this war to a limited extent is ridiculous and inconsistent with the lessons of history and the processes of human nature. An attempt to do so will promptly engulf us

to the limits of manpower and material resources in a struggle which, in all probability, will last for years and lead to nothing but terror, butchery, impoverishment, and the near extermination of everyone concerned.

"Our leaders have no right to gamble further with the lifeblood and, indeed, the very existence of our Nation. Let us arm America to the teeth and defend our own hemisphere to the death, but, in order to do so, let us conserve our resources for these purposes instead of dissipating them all over the face of the globe in a mad and fantastic crusade to police and reform the world.

"The American people do not want to enter this war."

There are those who say that this policy is a policy of appeasement. Our forefathers did not regard that policy as such. Our forefathers did not participate in wars all over the world at the request of the British Empire. They did not join the Spanish Armada against Great Britain or the British Fleet against Spain, but whenever either of those countries came to attack us our forefathers successfully defended America against them. We can do it again and again and again if necessary. And that goes for Hitler.

Sincerely yours.

CHARLES W. TOBEY.

North Carolina and Relief

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Thursday, May 8), 1941

EDITORIAL FROM THE STATE MAGAZINE

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the columns of the State Magazine, published at Raleigh, N. C., by Hon. Carl Goerch, entitled "North Carolina and Relief." In bringing this editorial to the attention of the readers of the CONGRESSIONAL RECORD I wish particularly that they note that the "per capita expenditures by the Federal Government for relief and relief work in North Carolina for the period from April 8, 1935, when funds became available under the Emergency Relief Appropriation Act, through 1940, were the lowest in the Nation."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the State Magazine, Raleigh, N. C.]

NORTH CAROLINA AND RELIEF

Per capita expenditures by the Federal Government for relief and relief work in North Carolina for the period from April 8, 1935, when funds became available under the Emergency Relief Appropriation Act, through 1940 were the lowest in the Nation.

We doubt that many of our readers knew this. So far as we ourselves are concerned, we were in complete ignorance of it.

But it's a fact, and here are the figures to prove it:

District of Columbia	$361.74
Montana	251.26
New Mexico	157.82
Washington	134.73
New York	116.91
Illinois	108.36
California	101.31
West Virginia	98.37
Florida	89.40
South Carolina	80.76
Tennessee	59.45
North Carolina	48.46

Those are just a few States, picked at random. The national average for relief expenditures per capita in the country is $102.26. You'll notice that the expenditure in North Carolina is less than half that amount.

Altogether there are 28 States which get more than twice as much as North Carolina does. There are 10 States that get more than three times as much.

When we say "relief expenditures," we include many agencies, among them being Work Projects Administration, Public Works Administration, Civilian Conservation Corps, National Youth Administration, Department of Agriculture, Farm Security Administration, and so on.

There are two conclusions to draw from those extremely interesting figures. One is that North Carolina is in better shape than any other State in the Union; the other is that North Carolina hasn't been receiving her rightful share of funds.

Frankly, we do not know which conclusion is correct, but regardless of that, it would appear that North Carolina is having to support its sister States to a greater extent than does any other State in the Union.

And the reason we're calling this to your attention is not in the way of complaint, but merely to let you know the position which North Carolina occupies in connection with the financial status of the Nation.

It's worth paying a little extra just for the privilege of living and doing business in North Carolina.

Have They All the Answers?

REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. MURRAY. Mr. Speaker, the following article is taken from the Merry-Go-Round in the Washington Times-Herald of recent date:

PRICE REGULATORS

The old James G. Blaine mansion on Massachusetts Avenue has the first push-button elevator ever installed in this country. Today, almost every time that elevator goes up, prices go down.

The elevator operates between the office of John Hamm on the second floor and David Ginsburg on the third floor, and these two young men, whose combined age is only 61, are the ace lieutenants of Defense Price Regulator Leon Henderson in preventing inflation.

As Henderson's lieutenants they are Washington's newest and most effective pair of brain trusters. Henderson learns from trade sources that the price of steel scrap is going up, and he sticks his head through the door of Hamm's office and says: "John, get busy on that, will you?' The elevator goes up from Hamm's office to Ginsburg's, and presently the price of steel scrap gets a jolt.

By comparison with Ginsburg, Hamm is an old man, age 32. Ginsburg is 29. Hamm is a Princeton product, Ginsburg is one of the Frankfurter boys, who made good at the Harvard Law School in 1934.

Any businessman who might be alarmed about this new brain-trust team should take a look at the cartoon in Hamm's office. On the wall is a genuine Daumier, vintage 1870, which shows at least that they have a sense of humor.

It's a drawing of a big man struggling against the efforts of three little men who are clinging to his arms and legs. The big man is Business, and the three little men are the 1870 version of the New Deal. In French, the caption reads, "How can I walk when you hold me back all the time?"

One. This delegation of power by the present administration with doubtful legal authority, if continued, will cause Congress to degenerate into a public debating society.

Two. If this country is expected to follow democratic processes, the price-control problem should be met in an orderly manner by a body composed of representatives of producers, consumers, and distributors.

Three. Is it not depressing to think that a 29-year-old Harvard "brain truster" has so many answers with so little experience behind him?

Four. The price fixers pegged butter at 31 cents per pound when the market price was 33 cents per pound the day that this was done. The price fixers have assumed the power to give the labor of the farmers a 10-cent per hour or less schedule with this 31 cents per pound butter price peg.

Five. If these "brain trusters" themselves had to extract some of the 108,000,000,000 pounds of milk produced annually in the United States, they would find that something would be going up and down beside the Washington elevators.

Six. For the welfare of this country we need more and more men with common horse sense and fewer and fewer Frankfurter "hot dogs" from Harvard.

I Am An American Day

REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. VOORHIS of California. Mr. Speaker, Sunday, May 18, has been set aside as I Am An American Day. It seems to me that the people who are trying through this effort to lay emphasis on the meaning of American citizenship are doing a very fine and constructive thing. One of the efforts they are making is to get people who are American citizens to guide and assist worth-while people who are in this country, but who

have not yet become citizens, so that they may understand the meaning of citizenship and be informed and instructed in the ways in which they can acquire citizenship.

I feel this is an undertaking that should have the support of every earnest American and I feel it is proper to draw this to the attention of the membership of the House at this time. It is my hope that all of us will do whatever we can to make I Am An American Day the success it deserves to be.

The Blitz Is On

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

AN EDITORIAL BY SEYMOUR S. TIBBALS, OF THE FRANKLIN (OHIO) CHRONICLE

Mr. BROWN of Ohio. Mr. Speaker, it is in the rural communities and the small cities of America that the soundest thinking is being done today. Seymour S. Tibbals, editor emeritus of the Franklin Chronicle of Franklin, Ohio, has long been recognized as one of the most able small-city editors in the United States. Mr. Tibbals has lived nearly three-quarters of a century in Franklin. For more than 50 years he has been a newspaperman. No one knows the thoughts, the ideals, and aspirations of the typical American community, such as Franklin, better or is more able to express them in writing, than is Seymour S. Tibbals. Therefore, I believe it will be beneficial to the Congress, and to the country generally, to make a matter of record an editorial written by Mr. Tibbals and appearing in the Franklin Chronicle on Thursday, May 8:

[From the Franklin (Ohio) Chronicle of May 8, 1941]

The blitz is on. A rolling barrage of propaganda is being laid down to arouse the people out of what is called apathy, but which is really a firm resistance to open participation in the war. The American people, well-informed by press and radio, know what is going on in Europe. They are not poor, benighted heathens, but the most literate and intelligent population on earth. They know that Britain's downfall would be tragic, and would bring all sorts of desperate problems in its train. They want to help Britain in all possible ways—short of war. Our people also are for defense to the hilt. "Millions for defense," was the cry when our country was young. Today the cry is "Billions for defense." The people are not asleep. They know the menace of Hitlerism just as the State Department does. The people of the United States will fight to the last man to save the soil of America. They have not been convinced that the way to do this is to enter the wars in Europe, in Africa, and in Asia. Yes, the barrage is on. It remains to be seen whether the people can be roused into war hysteria or whether, with all their sources of information, about what is going on in this world, they will still permit the quiet voice of reason to counsel them. After all, it is they who will fight this war if it is to be fought; it is they who will pay for the war; it is their destiny that is at stake. Whether or not we shall enter this war at the eleventh hour is the greatest decision the people have been called upon to make since the Civil War, not forgetting the World War which we entered "to make the world safe for democracy." We have confidence in their judgment, in that good old Yankee horse sense that has so often come to their rescue.

Colorado Retailers Question the New Ruling by Wages and Hours Act Administrator

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

LETTER FROM COLORADO RETAILERS, INC.

Mr. HILL of Colorado. Mr. Speaker, I think the retail dealers of this country are entitled to know that an effort is being made to include all of them under the Wages and Hours Act. I insert in the RECORD a letter received from a prominent hardware and implement dealer of Colorado, who has had years of experience and knows whereof he speaks.

In this great crisis every branch of the industrial life of our country should be considered as an integral part of our defense program. The small retailer who serves his community to the best of his ability is a part, not only of his own business, but of every activity in the community. The voice of our friends pointing out the injustice of the rules and regulations proposed by boards, bureaus, and commissions established by the Congress should by all means receive careful consideration. This letter needs no explanation:

EL PASO COUNTY RETAILERS, INC.,
Colorado Springs, Colo., May 10, 1941.

Representative WILLIAM S. HILL,
Washington, D. C.

DEAR BILL: The Mountain States Hardware and Implement Association and the Colorado Retailers Association, together with over 1,500 members, are strongly opposed to the changes now proposed by the Administrator of the Wages and Hours Act. The new Bulletin, No. 6, differs in three principal ways from the edition of December 1938:

First, it permits sales to be regarded as retail sales, provided they are made in customary quantities without special prices. Now, that is not fair. Every man that is in or ever was in business knows that there are times and conditions that exist that force him to adjust a price or sell at a slightly lower price in order to meet some competition somewhere, either from a jobber selling direct or from many other causes which arise in the course of a business week—catalog houses, chains, etc, for example, and, last but not least, cooperatives, the Government itself, and the store without eight employees, which doesn't come under the act.

Second, an establishment cannot qualify as a retail establishment for the exemption of section 13 (a) (2) if more than a substantial amount of its sales are nonretail. "Substantial" is interpreted as meaning somewhere between 10 and 30 percent. Now, that is very vague; it is not at all clear. We would like, once and for all, a clear-cut decision. We ask that it be 49 percent, which is less than half. We all want to keep as many on our pay rolls as possible, but as sure as the sun sets, this 10 to 30 percent will of necessity put many people out of work. There will be absolutely no incentive to build up or grow; we will all have to limit ourselves to one or two employees.

You know it is plenty hard right now to keep one step ahead of the sheriff; with all of the taxes and new proposed taxes, what is one to do?

Businessmen as a whole who have worked years to build a business large enough to support eight or more employees have found themselves just getting by, receiving no return on their investment, only receiving a limited salary. They cannot carry much more of a load. Maybe they should be forced to close their doors; who knows?

We would ask you, as our Representative, to take this matter up for us with General Fleming, as head of the Wage and Hour Division, place our cause with him, and urge reconsideration to at least 49 percent nonretail sales with no further strings.

With kind personal regards.

COLORADO RETAILERS, INC.,
J. R. LOWELL, *President.*

National-Defense Financing

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

RADIO ADDRESS OF HAROLD N. GRAVES, ASSISTANT TO THE SECRETARY OF THE TREASURY

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Harold N. Graves, Assistant to the Secretary of the Treasury, broadcast from Washington over the National Radio Forum, May 5, 1941:

Tonight I am going to talk about the future—not alone that part of it which we can only guess, but that part which we can see clearly and certainly. I am going to talk about the future as it touches your pocketbook, my pocketbook, and the Nation's pocketbook.

What we as individuals all hope to do tomorrow, next month, and in the next decade represents also the country's desires and aspirations. As individuals, we hope to own homes, we hope to have children who will carry forward our names and do them honor, we want to give our sons and daughters the fullest opportunities for education and development, and we want constantly to improve our own position in life.

Multiplied and magnified 130,000,000 times this is also our Nation's ambition. As a nation we want to have peaceful and mutually profitable relations with other nations, so that we may go on adding to our

vast wealth of roads and schools, improving the goods we make and the goods we consume, raising our standards of living and increasing the benefits enjoyed by all of us who live in this country.

This we are all resolved and determined to do.

Today we have rolled up our sleeves and gone to work to insure this future. Our factories are humming, making our Military Establishment strong, so that we may be impregnable against any attack by force. Scores of our cargo vessels are being gathered to form a bridge of ships whereby supplies will be carried to our friends—the enemies of force across the Atlantic. Our young men are in training camps, learning the discipline and techniques of the modern army.

We are keenly conscious now that in addition to our bountiful privileges, we have duties as well. For a long time the people have been insistent in their desire to shoulder responsibility by paying higher taxes for defense. Eighteen months ago the opinion polls showed that 6 out of every 10 of us wanted to shoulder this responsibility. A new, stiffer Revenue Act was passed, but still more of us than before wanted to put our dollars to work to expand our Army, Navy, and air forces. Our leaders in Washington are now discussing new tax schedules to meet this want.

Last week the Treasury Department placed defense-savings stamps and defense-savings bonds on sale in post offices and banks near you. You already have heard about the nature and purpose of these stamps and bonds. They offer every citizen an opportunity to lend his money voluntarily to the Government, for his own profit and to help achieve the objectives that he wants to see achieved.

Our desires for the future and our impulse to protect that future now did not originate with us. They are common to all men. Our dreams for security, equality, and the right to stand on our own feet were borne to this Nation on great streams of immigrant peoples. They brought these human yearnings from Sussex, and Clydeside, from the farms of France, from Saxony and Bavaria, from Sicily and Lombardy, from the green hills of Ireland, and from Galicia in Poland.

We are not a nation because we speak one language; we speak many tongues. We are not a nation because we worship in the same way; we belong to more than 200 religious denominations. We are a nation because we are men and women of one idea: The idea of the greatest freedom to each individual, so long as that freedom does not harm our society.

Refugees from totalitarian countries are amazed at what our equalitarian society has achieved. Some of them have spent hours just photographing the hundreds and hundreds of automobiles which stand at the curbs of every American city. To us, this is commonplace; to them, it is a miracle. They are amazed at our gigantic riches. They are amazed at our spirit of easy comradeship—between the diner at a restaurant and the waiter, between the taxi driver and his fare. All men have had the same dreams as these, but in our country they look more real, and we shall go on making them more and more true.

Around us today, the world is a strange and almost unrecognizable place. An invader is in uneasy possession of one-third of China—an area as big as our whole Nation east of the Mississippi. Another invader is astride almost the whole continent of Europe. A crooked cross, emblem of that invader, waves in Norway at the continent's northern tip, and in Greece, nearly 2,000 miles southward.

The war machine of this invader is being fueled by the enforced labor and the confiscated money and resources of Czechs, Poles, Dutchmen, Belgians, Frenchmen, and other subject peoples. After the war, the carriers of the crooked cross intend that their industrial machinery will be operated the same way. In their world of tomorrow, they intend to be a master race, controlling the life of whole continents. In their world of the future, they intend to control by force the biggest monopoly of labor, of business, and of ideas in history.

We can see now some of the fatal mistakes that were made in Europe. One by one the countries of Europe were divided, one from the other. Too late, and too few, they began to feel concern, one for the other. One by one they were swallowed.

As with countries, so it was with individuals. In France, there was thought for present costs rather than future gains. In the last year but one before the outbreak of war France, on the edge of Europe's cauldron, spent less for armaments than did the United States, 3,000 miles away. In the allied nations there were men who thought that this was just another war in which they could muddle through to victory. Today, Paris is in the hands of the enemy, and Britain's cities and villages have felt the hot blast of destructive bombs.

Sober and serious as they are, Americans cannot say that their defenses and their weapons of war are now what they want them to be.

We can say that we and our chosen leaders have not repeated and are not repeating the errors of the countries across the Atlantic. We are cleaving fast to our friends, and we will not be divided from them. We are committed to help Britain, not only because Britain stands for our way of life, but also because by so doing we can defend our own interests and give ourselves time to stock our own arsenal. We already have made up our minds to spend, and we are spending unstintingly for defense.

In the 9 months between the first of last July and the beginning of last April our Government spent $4,500,000,000 for defense. Under the Lease Lend Act and other authorizations of our Congress we have so far planned the outlay on future defenses of nearly 10 times that sum—$39,600,000,000.

Our construction of plants and factories is nearing the first stage of completion. But this is only low gear. We intend to move and are moving into second gear and toward high gear, putting these factories to work in the production of finished materials in ever-increasing quantities. Before the end of this year we will find our Government spending more for defense than for all other purposes combined.

At this point our future is clearly visible. As far as our pocketbooks are concerned, tomorrow is marching from the horizon quickly toward us. Part of those billions for defense—used mostly to buy American materials and to pay American labor—have begun to flow back into our pockets, in the form of increased wages, more overtime pay, and larger dividends on stocks.

America is feeling boomy. Wages have risen faster than the price of the things we spend our wages for; our income has risen faster than our outgo.

This was also true for a time during the last war, and a spending spree resulted. Perhaps some of you remember that it was not uncommon then to see day laborers working in silk shirts. Perhaps some of you remember, too, the economic dislocation which followed. As America moved rapidly into the production of war materials, the production of other things—clothes, furniture, and so on—dropped. Even for a time after the war many of the everyday things that we wanted to buy were scarce and high in cost; those of use who had spent on silk shirts had to pay dear for cotton shirts.

That is one thing we want to avoid now. We want to live soberly today so that we will not regret tomorrow.

On the one hand, our decision to build our defenses with all our might means inevitably that our production of everyday goods will decline. If John Smith and Martha Jones move from their present jobs into war industries, then their labor no longer can be used for the production of everyday goods. If aluminum is needed for planes, then its use for making pots and pans must be limited. In the absence of other factors, this transition would result in a blowing up of prices to far above normal proportions.

On the other hand, however, the people have voluntarily decided to put an increased portion of their income into national defense. We have chosen, as a Nation, to increase our purchases of war goods, and to limit the amount of our incomes which can be spent on other things. The number of potential buyers of goods will be limited along with the amount of goods themselves, and a balance will be maintained. This is the first, firm line of defense against inflation.

In this line of defense taxes are our Regular Army, and defense savings stamps and defense savings bonds are our volunteers. Through their Representatives in Congress, the people vote the taxes. As individual citizens, they will make up their minds to contribute still more to defense funds and to their own personal futures, too. For the savings bonds will pay for national defense today, and when their value, plus interest, is returned to you they will pay for those things that you want to do and we all want to do in our world of tomorrow.

Our pocketbooks are all sizes, and the defense bonds now being offered by the Treasury are all sizes, too. There are thousands among you listening tonight who have already bought your first defense savings bonds or your first defense saving stamps. Some of you know perhaps better than I can tell you what the securities are.

Our bonds are divided into three families: E, F, and G. The F and G series are meant primarily for persons and corporations who make a practice of investing their earnings. They carry interest of about 2½ percent. Although they may be redeemed beforehand, the date when they come due is 12 years from the time of purchase.

The E bond is for the individual with a moderate or small income who still wants to do his part as a volunteer. E bonds vary in size from one which can be bought for $18.75 to another priced at $750. They carry a higher interest rate than the F and G bonds—2.9 percent—and they come due 2 years earlier; that is, in 10 years from the time of purchase.

In 10 years the Treasury will buy these bonds back for a third more than you paid for them. The $18.75 bond will be worth $25 and the $750 bond will be worth a thousand dollars.

The F and G bonds are meant for habitual investors, the E bond is the people's bond. You may buy E bonds for yourself, if you are married, you may buy them in the name and on behalf of husband, or wife, or for both of you at once, you may buy for son or daughter. Right now, defense savings bonds will buy guns, planes, and tanks. Tomorrow, they may buy a new set of screens for the house, or a college education.

If you are among those who cannot afford to buy a savings bond out of a single pay check, then savings stamps are within your reach. These are sold in the same places as bonds—that is, in banks and at post offices—and they come in denominations of from 10 cents to $5. They do not earn interest, but each stamp buyer receives an album in which he can save his stamps, and when he has accumulated enough of them, he can exchange them for an interest-bearing bond.

During the past few days, some of you undoubtedly have bought Government bonds for the first time in your lives, others may be thinking that you never in your lives heard so much talk about them.

For this, there is an excellent reason. In the past, the Treasury has sold most of its bonds to banks and investors—and with lower offerings of interest than are made

available to you now. Such issues, of course, will be continued, but today the Treasury does not merely wish to raise money—which it could do readily enough through banks—but it wishes to let every American who is able and willing to do so, buy a share in his country and a stock in his own future. Thus, he becomes a partner in the Nation and shares in this country always have been and always will be the most rock-solid investment in the world.

The dollar value of defense savings bonds is as indestructible as the hardness of diamonds. Only the Government can sell them, and only the Government can buy them back. They cannot be traded in on the exchanges, and they cannot be swapped; they cannot be beaten down in value, nor pushed up in price except through the normal accumulation of interest.

Subject to the single restriction that you cannot return bonds sooner than 60 days after the first day of the month you bought them, the Treasury always will pay you at least what you paid for the bonds. And the longer you keep the bonds the more their value will rise.

The Treasury frankly wishes you to buy savings bonds, but neither it nor any other Government department is going to stage a campaign to make you do so. The bonds will not serve their purpose if you buy one bond or a dozen and then stop. They are put forward as a means for every citizen to carry out a consistent and continuous savings program, to be followed week by week or month by month.

That is why we are not making a campaign. We are hanging out our shingle, to let you know that we are in the business of selling bonds. We are doing business and will continue to do business at convenient places—at your bank, at your post office.

Up to now, I have talked mostly about how volunteer bonds and stamps will affect the country and its economy. Your decision about your own savings program naturally will depend on how the purchase of bonds and stamps will affect you.

Nobody in this country can tell you or is going to tell you that you must do this or that with your money. You earned it, and you have a perfect right to do with it what you please. Some of you, particularly, should not participate in the bond and stamp program for the time being, because of pressing, prior claims on your income.

Those of us who are employed now for the first time in a long time, those of us who are in a position for the first time to maintain an adequate standard of living, those of us who are assuming new family responsibilities—all of us who fall into these categories should first provide for our vital wants.

For the great bulk of us—perhaps 50,000,000 or more—who can immediately begin to invest in savings stamps and bonds, common sense should dictate what proportion of our income we will spend and what proportion we will set aside.

We should all remember the men who bought silk shirts in the last war, and then afterward had to scrimp to buy cotton ones. Among the definite things in the future which we must take for granted is a period of post-war readjustment—when John Smith and Martha Jones, perhaps after a time of looking for jobs, move back into normal employment from war industry, and when our aluminum goes back into pots and pans.

Then we will move most smoothly forward with what we hope to do and want to do tomorrow if we have reserves for this settling-down period. Reserves then will help us to carry ahead our normal lives—establishing our comfort and security and getting on with our future in a peacetime world.

But for the present our stamps and bonds must serve a wartime purpose. Americans, least of all peoples, need to be told that dollars are weapons. This was a rich continent when Columbus discovered it four and a half centuries ago. We have made it richer still. Our skill, hard work, and teamwork have mined riches out of the ground and grown them out of the earth.

Once earned, our dollars have fought the good fight against poverty, ignorance, and disease, and have conquered time and distance. Our wide country is close-knit, bound around by an endless network of roads and communications. Our life in this Nation of ours, enlivened by a thousand opportunities for pleasure and self-betterment, is incomparably richer and more varied than the life on any other continent or in any other country on the globe.

Our machine civilization leads all others; and to those who say that this has made us soft, I answer that as a matter of fact we have been getting tougher and tougher since the time of Capt. John Smith. From the Old World we have come together and prospered. We are stricken less by disease, we live longer, and we are taller, heavier, and stronger than any of the single races which made us.

You and I and our children are better educated than the large mass of our European contemporaries. We regard each other, person and person and group and group, with greater respect, for within our free institutions, a mountaineer may become a Cabinet member, and an immigrant boy a captain of industry.

These things we have earned, and these things we mean to keep.

In this resolve the people of the United States are beginning to mobilize their great wealth. Five years ago we were amazed when a certain totalitarian regime appropriated $4,000,000,000 for armaments—forgetting that a few months previously we in this country had spent that much on Christmas presents alone. Now our tremendous, careless, incalculable riches are being poured into a purposeful program of democracy's defense.

Your Government asks you to take your part in this program. Invest in a savings bond, and then another and another. By so doing you will help yourselves and you will help to defend your country.

Thank you kindly, and good night.

Abraham Lincoln, Carl Sandburg, and Richard Martin

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. CANFIELD. Mr. Speaker, last Saturday the Washington Evening Star carried a page-1 story of real human interest. To me it has more than mere local appeal and I present it to the House:

[From the Washington Evening Star of May 10, 1941]

STORY OF A MAN IN THE RAIN AT THE LINCOLN MEMORIAL

Richard Martin was driving around the Lincoln Memorial the other night when it started to rain.

He saw a man, who looked elderly, running for shelter. From the man's appearance, he got the idea the man couldn't afford a taxicab, even if one had been handy.

Mr. Martin stopped his car and offered the man shelter from the rain and a ride into town. The stranger said he wanted to be dropped at a downtown hotel.

As he got out of the car, he asked Mr. Martin for his address. The driver told him he lived at 1230 New Hampshire Avenue NW.

Shaking hands, the stranger said:

"You are a practical Christian."

The stranger said today that he was going to send Mr. Martin a gift—an autographed copy of a book. And on the flyleaf, he will write a few words to "The man who saved me from a drenching."

The man Mr. Martin picked up at Lincoln's shrine was the poet-author of a monumental work on Lincoln—Carl Sandburg.

Cracker-Barrel Opinion

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

EDITORIAL FROM THE HUNTERDON COUNTY (N. J.) DEMOCRAT

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hunterdon County Democrat, of April 24, 1941:

[From the Hunterdon County Democrat of April 24, 1941]

"CRACKER BARREL" OPINION

President Roosevelt last Friday referred to the "cracker barrel" as an American institution and indicated that the Government is looking to it for orders.

The cracker barrel, as such, went out after cracker makers started using sealed boxes for their product, but the "cracker barrel" as an institution has by no means disappeared. Every country store has its debate club, and along with the country stores are service stations and other more modern institutions where men meet and discuss affairs of the day, just as they have done for generations.

If Mr. Roosevelt wants to know what the "cracker barrel" philosophers are thinking, we can tell him that most of them are concerned about the war, of course. They are skeptical as to whether we can keep out of it, and even more skeptical as to whether our people are being prepared and conditioned to stand up against the strain another war will impose.

The New Deal's whole objective has been to soften the people, to make them critical if they suffer any adversity, to make them crabbed if asked to make any sacrifice, to look to the Government for a way out of every predicament they find themselves in, and to depend upon self-appointed "class" leaders to get for them what they term their rights.

As the President said in this press interview, many of the people are not aware of the serious predicament they face. What those who think and know what war means have been waiting to hear is that they cannot have their cake and eat it too; they cannot have leaf-raking projects and an effective preparation for defense; they cannot have skyrocketing wages and not have higher

prices; they cannot have boom wages in industry and starvation income for those engaged in farming and they cannot have efficient defense production under direction of social reformers who know nothing about production or management.

These are some of the things the cracker-barrel groups are discussing and if the truth were known, the "cracker barrel" boys are far out ahead of the New Deal directorate in advocacy of a program that will save America in these critical times. Their answer is hard work, an end to professional breeders of class hatred in high places, elimination of waste and extravagant spending in every department of Government, and the substitution of plain speaking for slick political salesmanship.

The American people can sacrifice. They will sacrifice. All they are waiting for is the call to do so and for those in high places to set the example, in order that they may have confidence that success will be the reward for the supreme effort every man and woman may be called upon to make.

National Defense Threatened by Communists

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. DONDERO. Mr. Speaker, I was deeply disturbed to read in the Monday morning papers that an official of the United Automobile Workers of the C. I. O., one Walter Reuther, has issued an edict to the American people—to the Nation—to the President of the United States—as well as to the officials of the General Motors Corporation, that he would give them until next Thursday morning at 7 o'clock to agree to the union demands or else a strike would be called in the 61 plants of General Motors where that union has bargaining rights. Important national defense work is involved in this threat.

The President has called for speed and more speed in the building of the Nation's defenses. We have been told not only by the President, but by many other speakers, in the last 2 or 3 weeks, that the situation is critical; that time is of the essence in the building of our national defense. In the face of this, and after a deadlock extending over 10 days, following 8 weeks of negotiations in Detroit the Nation is now threatened by a manifesto issued by a man whose record, as set forth in the CONGRESSIONAL RECORD, at least justifies the suspicion, if it does not clearly show, that he is a communistic labor agitator.

We find this man Reuther, as a union leader, issuing a manifesto that the work of national defense will be stopped unless their arbitrary demands are met. They are seizing this hour of the Nation's peril to make unreasonable demands. The fathers and mothers of boys being drafted and taken out of their homes, and away from their business and forced into the Army at $21 a month, have been deeply worried over strikes. Many of these are purely jurisdictional in nature, and have nothing whatsoever to do with wages, hours, or working conditions. Yet they just as effectively delay the building of our national defense as do the strikes for increased wages or closed shop.

I know something about these conditions. There are over 413,000 people in the Seventeenth Congressional District of Michigan, which I have the honor to represent. It is the largest district in the State. Located within the Seventeenth District are several General Motors plants. Located in the industrial centers adjacent to it, are other plants in which many thousands of my constituents work. A strike in General Motors not only means that work on vast defense contracts will stop, but also that thousands upon thousands of wage earners will have their wages stopped; they will face privation and suffering if this strike takes place.

Behind this whole situation lurks terrible danger, bearing a similarity to conditions in France that must frighten any fair-minded man who studies both situations. The President himself in his Jackson Day speech declared:

> We have seen how the workers of France were betrayed by their so-called champions, the Communists. For no matter what Communist lips have to say, their actions have proved that in their hearts they care nothing for the real rights of labor.

On April 3 I presented to this House the details of what actually happened in France. The world depression resulted in a swing to the left over there. Socialist Leon Blum became Prime Minister in 1936. The first move was political and the second move industrial. They worked these two together.

I shall not repeat the details of the betrayal of France by her labor leaders, by her governmental officials, and by some of her military officials as well. What I desire to emphasize today is that the workers, the wage earners, of France are enslaved at this hour, and they were betrayed into that slavery by their own communistic leaders.

My fears for our country, and the welfare of my own constituents are not lessened by the presence on the Mediation Board of John Brophy, who has been branded a Communist by no less an authority than John L. Lewis himself.

I stated on April 2, on this floor, that patriotism and loyalty to our country do not exist in the ranks of the Communists, the radicals, and the saboteurs. I said then, and I repeat it, honest American workers go without work, and their families are deprived of the necessities of life because the enemies of the United States, and of the American workingman, are having their way. The President and his administration, by appointing to key positions in this Government individuals of questionable records, have done more to bring about the conditions now existing in our Nation than any other power.

We are now reaping the bitter fruits of that policy in this edict, this manifesto, insolently and defiantly hurled at the American people that vital defense work will stop at 7 o'clock on next Thursday morning. That edict comes from a man who is branded by a committee of this House as a subversive Communist, whose history as such was placed in the CONGRESSIONAL RECORD by one of the outstanding Democrats of this House, the distinguished gentleman from Georgia, Judge COX, on January 16, 1941.

It is of the greatest importance to this Nation for us to know what dreadful, if not vital, effects strikes may have upon our national-defense efforts. We must know whether these strikes arise from the legitimate desires of the workers, or whether they are inspired by those who want to overthrow our Government, and to enslave the workers along with the rest of the American people.

I shudder to learn that John Brophy was named by the President to the Mediation Board, now sitting to determine whether or not a great American industry engaged in defense work shall become silent; shall stop its wheels; shall cease work. This man Brophy may not mean much to you, my colleagues, until I recall to you that this is the same John Brophy whom John L. Lewis publicly branded, along with others, as—and I quote his language—

> Fakirs, repudiated leaders, traitors to the union, opportunists, and purveyors of every falsehood, slander, and deception.

Mr. Lewis further described Brophy, among others, as an agent of the Communists and intimated that some of them were paid direct from Moscow.

The United Mine Workers Journal on another occasion stated that the leadership of Brophy and others was—

> Doing its dirtiest to capture the United Mine Workers and to transform this splendid union into a Communist organization.

It is not enough, Mr. Speaker, to say that Mr. Brophy may have changed his mind, or that times have altered conditions. If among the more than 130,000,000 people of this country there cannot be found to sit on mediation boards men whose records are free of these taints, then, indeed, is America bankrupt of patriotic citizens.

An editorial in the Detroit Times of May 10 truthfully said that strikes in our defense production plants constituted the bottleneck out of which—

> we may try to pull our head when it is too late—as was the case in France, which lost her the war with Germany, mainly because she would not inaugurate compulsory arbitration in her defense industries.

That paragraph from that editorial ought to be pasted above the desk of every Member of Congress. It ought to be read every night in every home in this broad, free land of ours. There is no guaranty that it may not become a prophecy unless we face this problem honestly, frankly, courageously, and wisely.

This editorial says further:

> We either have not the power—or will not use the power—to order peace in our defense industries, to order compulsory arbitration of all differences by the employer and employee in those matters that aim straight at our vitals—strikes which are so evidently fomented by Communists.

We are actually now in the process of demanding from the youth of our land the supreme sacrifice, if necessary, yet we

continue to temporize with a situation which constitutes a greater danger to the defense and security of this Nation than if whole divisions of those brave young boys were stricken by plague and rendered helpless.

The American people must know, the American people do know, that industrial contribution is just as important, just as vital, if not more so, than the disposition and use of the armed troops themselves. We are temporizing with this situation in which we find men branded as Communists, as enemies of our form of government, as enemies of our American way of life, sitting on mediation boards. We find them on the other side, as union officials, issuing orders and manifestoes to the American people, setting deadlines on which defense work shall stop. We cannot tolerate this sort of thing. The American people will not tolerate it when they know the facts. They are looking to us of this Congress as their representatives through whom they can be articulate, to remedy this dangerous condition. We have waited too long. We have been too tolerant with this condition. We have been negligent in our tolerance of a danger that may well take us down the road to ruin and land us where weeping France is today.

What this Detroit Times editorial means, what we all mean when we speak of compulsory mediation or compulsory arbitration, is that the mediators or the arbitrators will in all cases be persons who have no personal interest in the decisions rendered by them. Let us hope that if after 7 o'clock next Thursday morning there is a strike called in the important automotive industry, and an arbitration board is set up, that the members chosen to serve on such a board will be persons of such manifest openness and fairness of mind as to place beyond any doubt their disinterest except in the welfare of the Nation and the justice of their decisions.

It is high time for it to be said that no single group of citizens in this Nation has any monopoly on patriotism or loyalty to this country. We know it to be true—that businessmen—owners and managers of industry—have obviously more at stake in the welfare and the security of this Nation than professional labor organizers and agitators. These businessmen would, from a sense of enlightened self-interest, to say nothing of their patriotism, seek to settle on the broadest possible terms any of these industrial disputes which, we all know, are so gravely interfering with our national-defense efforts.

I think it is high time that we cease to remain silent while professional agitators seek to impugn every motive and every action of respectable business men and women. We have had all too much of that sort of thing.

I do not hesitate to say I have every confidence in the patriotism and the ability, and in the motives and the intentions of the men who lead and direct our great industries to do a practical, efficient and patriotic job in building the national defense.

It is difficult to speak with moderation when we consider some of the demands being made by these labor agitators. Let us remember that the boys who are being taken from their homes, from their colleges, from their businesses, will receive less than $1 a day and food, clothes, and shelter. Workers in civil life, union workers, make 6, 8, and 10 times that wage.

I want to make it clear that I am not holding the rank and file of American laborers responsible for these agitators. I firmly believe it is as important for us to free the rank and file of the union membership from the domination of labor racketeers and agitators as it is to protect the national defense against them.

If the urgency is half what we are told that it is, we cannot afford to lose one single day of national-defense production. If these strikes continue, Congress will be compelled in defense of our institutions and the American way of life to consider and pass legislation compelling labor disputes and controversies in industry, and between labor unions themselves, to submit their disputes to arbitration.

The Naval Affairs Committee of this House has already become conscious of the necessity for such action, and have recorded their recommendations to this House in what is known as the Vinson bill.

We must decide, Mr. Speaker, whether the great mass of patriotic American citizens, including the workers, shall prevail in their desire to preserve, in a war-darkened world, liberty, freedom and security, or whether we shall permit the advocates of alien doctrines to destroy them.

If It Were Not for Me, the Treasures of the Earth Would Remain Securely Locked—Farmers

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

ADDRESS OF J. ROY JONES, SOUTH CAROLINA COMMISSIONER OF AGRICULTURE, COMMERCE, AND INDUSTRY, AND PRESIDENT, NATIONAL ASSOCIATION OF COMMISSIONERS

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the opening remarks of J. Roy Jones, Commissioner of Agriculture for South Carolina and president of the National Association of Commissioners, at a called meeting of the commissioners in Washington, D. C., May 5, 6, and 7, 1941.

Believing that the agricultural commissioners of the United States are deeply interested in, or should be deeply interested in, agriculture and the producers of farm products, I invited the commissioners to appear before the Agricultural Committee of the House during the general hearings on farm legislation, for the purpose of giving their views and suggestions.

I appreciate their coming before our committee, and I am sure that their views and suggestions will be helpful to the committee in working out a major farm bill.

The address follows:

Gentlemen of the association, this is the first opportunity which I have had to express to you my gratification for the signal honor which you have conferred on me by electing me your president—particularly during my absence.

I have been in public life for a long time, and I very unhesitantly say that this is the highest honor I have had conferred upon me.

Our organization represents that great unorganized segment of our population which feeds and clothes the Nation.

Our clientele, so to speak, is the source of all of our wealth and upon their well-being depends the prosperity of the balance of the Nation. When agriculture sinks to below cost of production, the general trend of the country follows; and this is always true, except in abnormal times like those in which we are now living, when artificial conditions exist—and I mean by this, when spending, the national income is diverted from the normal channels of trade into production for the manufacture of the unproductive, or rather destructive materials.

Therefore, it is a source of great pleasure to me to be at the head of an organization whose aims and aspirations are for the benefit of the Nation's farmers; a class of our population which has always been a stabilizing factor throughout our entire national life. To me this is quite simple, for no man can till the soil without having an eternal hope within his breast; and no man can live in God's out of doors and commune daily with nature without having noble thoughts; no man can plant seeds into the breast of Mother Earth without feeling something divine within him, and when you have these three principles all in the heart of one individual, you cannot wonder but that this man will have a mental equilibrium, different from those in the hustle and bustle of city life; and, as a friend of mine once said, "If any man can be called one of God's noblemen, it is the American farmer."

I received word from the chairman of the House Committee on Agriculture that farm legislation, and particularly that legislation which affects the five basic agricultural commodities, was not making the progress which he felt that it should make.

Of the various measures introduced before the present Congress for the benefit of agriculture, all had met with strong, well-organized opposition; whereas the proponents of these measures were completely unorganized.

The chairman of the Committee on Agriculture of the House also let it be known that he deemed it imperative that the farmers be represented in Washington at the earliest possible date so that these matters could be ably presented to the Congress. The chairman stated that, in his opinion, there was no group so well qualified to represent the great mass of unorganized farmers as the commissioners, directors, and secretaries of agriculture of the various States, duly elected therefrom.

Time was of the essence and the calling of the executive committee was impossible if we were to be able to comply with the request of the chairman of the Agriculture Committee of the House.

Therefore, I took it upon myself to call this meeting, feeling certain that you would agree with me that it is the duty of our organization to lend our every effort to promote any legislation which will mean for the betterment of the farmers of our Nation.

I distinctly want this organization to feel that there was nothing presumptive on my

part, but my action was taken wholly and solely with the view of aiding and assisting the farmers throughout our entire Nation; when our national problems are in such chaotic condition as we now find them.

I do not mean, in any sense, to unduly criticize the leaders of our national affairs in the great emergency which now exists. However, facts are facts, and we must face them as such. The tremendous strides which have been made by industry working at full capacity and by organized labor in increasing their income are not true as to agriculture. None of our basic commodities have followed this upward trend in our national prosperity and none have reached that goal of parity at which we are all aiming.

If this trend continues, agriculture is bound to suffer. If increased cost of manufactured articles continues—and it is as sure to do so as the day follows the night—there will be an increase of costs on the part of our farmers. Unless the income of our farmer is materially increased, his purchasing power is bound to drop.

This is true of all of our crops, and this condition is not limited to any one section of the country.

Frankly, I am glad that such is the case, because all of us realize that there can be no national prosperity in farming when one section of the country is prosperous and another is in distress; for only a balanced agriculture will bring a uniform prosperity.

That this fact is rapidly being realized is the most gratifying event which has come under my observation since I have been president of this organization.

Closer cooperation between different sections of the country; the help of the wheat farmer to the cotton farmer; the rice farmer to the tobacco farmer; the corn farmer to the livestock man; and so on—throughout our entire agricultural program—has already accomplished good results which are going to bear fruits as years go on.

It is going to be my purpose to lend every ounce of my energy to continue this national cooperation and, with your help, and I feel positive that it will be unstintedly given by each of you, we are going to make even greater strides in the future than have been made in the past, and frankly, gentlemen, it is high time that this is being done.

During the past few months we have seen what strong organizations can do. We have seen them even challenge the authority of the Federal Government. We have seen critical industries, producing much needed war materials for defense, almost paralyzed by strikes. It is not my purpose to weigh the merits of these controversies between capital and labor—and in this I am speaking my personal views, and not as the president of this organization—but I am frank to state that, in my opinion, there is a fly in the ointment somewhere in our national set-up.

Near Columbia, S. C., is Fort Jackson, with 40,000 soldiers.

I have seen farm boys by the thousands called by the Government, put into uniform and taken away from their vocations for a year at $21 per month. I have seen them drilling without guns, marching without proper equipment, and whole divisions only 40 percent fitted out for active combat duty, while those who are charged with providing these materials for these boys in uniform are getting wages as high as $8 per day and better, and then strike and tie up productive industry for increased wages. In my opinion, this is grossly unfair and I believe that this organization believes as I do: That some action should be taken on the part of our Government to stop, and stop at once, the tying-up of essential industries by strikes which could and should be settled without the closing of plants.

Our President has stated that the Nation does not begin to realize the seriousness of our defense problem and our all-out aid to England. I may not realize to the fullest extent our danger, but I have confidence in our national leaders and when they state that the situation confronting America today is the most critical in our national life, I think it high time that every American citizen submerge personal gains for the common good and that we place our country first and our grievances, if we have any, second. And when all is said and done, it is the farmers of this Nation who are going to feed and clothe the workers, the soldiers, and others whom we may be called upon to help.

Fortunately, we have had no labor troubles in my State. Labor and industry are working hand in glove in this critical hour and I have every reason to believe that this condition is going to continue but, unfortunately, this does not prevail throughout our entire Nation.

No man living has a greater desire to see our laboring population prosper than I. I look with pride upon the gains which labor has made. I am happy to see sweatshops only unpleasant memories. I am happy to see the workingman toil shorter hours and have more time to enjoy his family and general recreation. I enjoy seeing those who have reached a certain age retire to live in comfort in their declining years, and I rejoice in all strides which labor has made. But I do not feel that a portion of labor should jeopardize our American way of life for personal gains and, as before stated, I feel that it is the duty of our Government to see that this condition is stopped, and stopped at once. Then, too, it is very unfair to the majority of laboring people who are putting forth 100-percent effort for national defense to be smeared with the unpatriotic actions of a minority. This may sound like strong language but it comes from the heart, and I believe that I voice the sentiments of every upright patriot in saying what I have said.

I therefore feel, gentlemen, that our presence in Washington today has the possibility of being productive for great good.

Mark Twain said that "everybody talks about the weather but nobody does anything about it." Everyone in Congress talks about parity, but up to the present time very little has been done about it.

At the very beginning of the present administration, one of the plans of the Democratic platform was parity for agriculture. Yet we have had 9½ years of talk about this important subject and are far from parity today. We must all realize that we are the spokesmen for the farmer. He does not have in the Capital highly paid and well-organized individuals or groups to present his views. He has no means to collectively lay before the Congress his problems, and there is no body of men in the entire United States better prepared or more ably equipped to speak for the farmer than is our organization.

Parity price is our goal, and we must never be content until it is reached. By collectively presenting our problems to the Congress at this time, I believe that we can focus the attention of the various Representatives upon the tragic situation of agriculture today; and, gentlemen, the situation is going to grow progressively worse unless the purchasing power of the farmer is increased, for there can be no shadow of doubt but that the articles he is going to have to buy will be substantially higher in the future than they have been in the past.

There are many things which deserve our attention. For the most part, there should be a focusing of thought on farm legislation, with the hope that there may be a meeting of minds on the major issues involved. Special and emergency matters will be given timely consideration.

There has been much discussion and quite a lot of publicity given to the question of prices. We have an obligation in connection with our marketing and related responsibilities to keep both the producer and consumer informed at all times regarding prices. In fairness to those who produce our food and fiber crops, it must be said that the prices which farmers are getting for their products are not high. In fact, prices generally received by them are considerably below parity, and in many instances below the cost of production. Information as to prices and values should be generally made known to consumer groups everywhere, most of whom are now and have been receiving increased wages or salaries for their services and higher prices for the things which they produce.

Since most commissioners, secretaries, and directors of agriculture, in accordance with statutory regulations, are being called upon to perform additional or emergency services in connection with the marketing of certain farm products, we should give timely thought to the new demands made upon us for services connected in many instances with national-defense activities in the different States. These developments serve to remind us of the need for speedy enactment of marketing legislation which is pending before the Congress.

I am hopeful that we can put up a solid front for agriculture and that each of us will be willing to submerge our personal opinions for the betterment of the whole.

I recently saw in the CONGRESSIONAL RECORD a statement from a farmer of the Midwest. If we could get over to Congress the sentiment of this one man, I believe that Congress itself would be more than willing to go down the line for legislation which will mean for the betterment of our great farming class. This farmer from the Midwest said:

"I AM THE FARMER

"I am the provider for all mankind. Upon me every human being constantly depends. A world itself is built upon my toil, my products, my honesty.

"Because of my industry, America, my country, leads the world. Her prosperity is maintained by me, her great commerce is the work of my good hands, her balance of trade springs from furrows of my farm. My reaper brings food for today, my plows hold promise for tomorrow.

"In war I am absolute, in peace I am indispensable—my country's surest defense and constant reliance. I am the very soul of America, the hope of the race, the balance wheel of civilization. When I prosper, men are happy; when I fail, all the world suffers.

"I live with Nature, walk in green fields under the golden sunlight, out in the great alone, where brain and brawn and toil supply mankind's primary needs, and I try to do my humble part to carry out the great plan of God.

"Even the birds are my companions, they greet me with a symphony at the new day's dawn and chum with me until the evening prayer is said. If it were not for me, the treasuries of the earth would remain securely locked, the granaries would be useless frames, man himself would be doomed speedily to extinction or decay."

Again, gentlemen, let me express to you my appreciation upon being elected your president and again let me pledge to you my best possible service which is in my power to render, and with the hope and prayer that through our collective efforts we may bring about a better way of living for those whom we represent.

The Farm Situation

EXTENSION OF REMARKS
OF
HON. JARED Y. SANDERS, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. SANDERS. Mr. Speaker, it seems that efforts are being made to cut farm appropriations again and I am sorry to note that some Members have singled out the cotton farmer for attack. These people seem impatient because the agricultural problem is a problem. They overlook the fact that, for 75 years or more, discriminatory freight and tariff rates, either enacted or permitted by Congress, very nearly bled agriculture white. There would be no agricultural problem and no necessity for legislating about it now had it not been for legislation in the other direction for nearly a century. Thus do our "sins return to plague us."

It is true that by means of legislative controls we are seeking by artificial means to increase the price the farmer is getting for his produce; but this would not be necessary except for the fact that the farmer is living in a world of artificial prices, made so by this Congress and preceeding Congresses. Congress has in years past raised the price of industrial goods by means of a tariff which was nothing more or less than a subsidy to the manufacturers. We have fixed the price of freight rates, which was nothing but a preferential subsidy in favor of certain sections to the detriment of others. By means of wage-and-hour acts and various other regulatory measures, fewer hours and fair treatment for labor have been effected. All of these things affect the price of the goods and services that the farmer must pay in order to exist in an artificial price world thus created.

The air is full of the poison gas of artificiality. Recognizing this fact, the Congress has fixed up gas masks for industry, labor, commerce, and for the farmer. But some seem to object to the farmer wearing a gas mask. In reply I would say that the American farmer, and the cotton farmer among them, as well as others, might get along without a gas mask just as well as could anyone else. But, in fairness to the farmer, these people must not insist upon the American farmer being deprived of his gas mask unless they are going to apply the same rule to all other groups—an unthinkable thing to do in this day and time. And certainly there is no reason why these people should single out the cotton farmer and try to tear his protection from him unless they are willing to apply the same rule to the farmers in their sections and to the industries in their sections as well.

I repeat that there would be no farm problem if the Federal Government had not created one by artificial price levels, fixed by means of tariffs, wage-and-hour acts, and other social legislation which has resulted in the farmer having to pay an artificially high price for everything he needs. I commend to those who are interested in this subject the very worthwhile tables contained in the statement by the distinguished and capable Member the gentleman from Missouri [Mr. CANNON] in the CONGRESSIONAL RECORD of March 14, 1941. I cite you one of these tables:

Prices of selected industrial commodities purchased by farmers if such prices had followed prices of selected agricultural commodities sold by farmers, Dec. 15, 1940

Commodity	Unit	Price Dec. 15, 1940	Price at farm ratio
Mower, 5-foot	Each	$97.14	$32.16
Binder, 7-foot	Each	259.00	92.66
Paint, ready-mixed	Gallon	2.85	1.30
Lumber, rough	M board ft.	46.20	16.80
Kitchen chairs	Each	1.56	.54
Horse blanket	Each	3.50	1.66
Men's work shoes	Pair	2.59	1.48
Barbed wire	80-rod spool	3.54	1.84

This comparison will give you some idea of why the farmer needs help. It is because you are giving help to all other groups of the country by means of artificial price stimulation. Remove the tariff wall and remove freight-rate discrimination and take away Federal control of wages for labor, and the 5-foot mower that the farmer buys for $97.14 could be bought for $32.16. I believe that the Congress has done the very best that it could do with a very complex and complicated problem, and I have voted for all of the humanitarian and social legislation that has come before this body since I have become a Member. But I certainly do not believe that there is any fairness in the proposition that we should apply artificial aid and subsidy and Federal assistance to the other groups of this country and that the farmer should be deprived of the assistance he needs.

It seems to me, Mr. Speaker, that this is no time for Members to be suggesting decreased aid to agriculture. Already the signs are beginning to point to the fact that the American farmer is getting the little end of the stick, and in appraising the situation, please remember that when the farmer gets sick, it is industry that, in a large measure, foots the bill. If the farmer cannot buy, the chances are that industry will not sell very much. Because under present world conditions, where in the world are we going to find a market for the products of industry except in our own back yard, where the farmer, hard working and uncomplaining as always, is endeavoring steadfastly, patiently, and courageously to make the best of a very bad bargain and to get his chores done.

I wish to call your attention at this time to another table submitted by the distinguished Member from Missouri [Mr. CANNON] the other day, showing the national income from 1909 to 1941 and the farmers' percentage of this income:

National income, United States, 1909–41

Year	Total	Nonfarm	Farm	Farm as percentage of total
	Million dollars	*Million dollars*	*Million dollars*	*Percent*
1909	26,415	22,070	4,345	16.4
1910	28,114	23,474	4,640	16.5
1911	28,480	24,251	4,229	14.8
1912	30,394	25,798	4,596	15.1
1913	32,133	27,560	4,573	14.2
1914	31,919	27,367	4,552	14.3
1915	33,210	28,404	4,806	14.5
1916	39,036	33,198	5,838	15.0
1917	47,385	38,482	8,903	18.8
1918	55,357	44,856	10,501	19.0
1919	60,354	48,756	11,598	19.2
1920	64,552	56,478	8,074	12.5
1921	54,210	49,883	4,327	8.0
1922	57,546	52,109	5,437	9.4
1923	66,171	59,620	6,551	9.9
1924	68,824	61,898	6,926	10.1
1925	73,278	65,852	7,426	10.1
1926	75,564	68,695	6,869	9.1
1927	76,457	69,618	6,839	8.9
1928	78,117	71,209	6,908	8.8
1929	80,372	73,542	6,830	8.5
1930	73,571	68,456	5,115	7.0
1931	62,384	59,303	3,081	4.9
1932	48,355	46,551	1,804	3.7
1933	45,771	43,174	2,597	5.7
1934	52,540	49,164	3,376	6.4
1935	57,007	52,770	4,237	7.4
1936	66,722	61,599	5,123	7.7
1937	70,758	65,282	5,471	7.7
1938	64,687	60,236	4,451	6.9
1939 [1]	68,127	63,821	4,306	6.3
1940 [2]	71,829	67,611	4,218	5.9
1941 [3]	80,350	75,700	4,650	5.8
INCLUDING GOVERNMENT PAYMENTS				
1933	45,933	43,174	2,759	6.0
1934	53,096	49,164	3,932	7.4
1935	57,590	52,770	4,820	8.4
1936	67,009	61,599	5,410	8.1
1937	71,120	65,282	5,838	8.2
1938	65,169	60,236	4,933	7.6
1939 [1]	68,934	63,821	5,113	7.4
1940 [2]	72,595	67,611	4,984	6.9
1941 [3]	81,050	75,700	5,350	6.6

[1] Revision of preliminary estimate given in table on p. 650 of 1941 agricultural appropriation hearings.
[2] Preliminary.
[3] Forecast.
Source: Bureau of Agricultural Economics.

From this table you will notice that, whereas in 1909 the farmers of this country got 16.4 percent of the total national income, by 1940 this had dropped to 5.9 percent, and the estimated figures indicate that the farmers' share of the national income for the year 1941 will be 5.8 percent. In other words, the farmers today are getting one-third of the proportion of the national income that they got in 1909, therefore the farmers of today, even with other figures estimated at parity, have just one-third of the purchasing power that they had in 1909. And another thing of great significance is this fact, that 6 percent of our national income is going to farmers who comprise 22.9 percent of our total population.

And from this table you will notice another significant thing. The lean years of the American farmer coincide to a large extent with the depression years for the United States as a whole. And during the years immediately preceding the crash of 1929, the danger signs were there to be seen by those who had the vision. There were many people in this country who pointed out in 1926–27 that the farmers were losing their purchasing power under the agricultural conditions prevailing then as now in this country. These prophets proclaimed the truth—that unless something was done to help

agriculture, industrial and economic disaster lay ahead. But their prophesying was in vain; their warnings fell on unheeding ears. And, Mr. Speaker, the signs of impending catastrophe, I greatly fear, can be seen upon the economic horizon of our times. According to this table, in this year of 1941 all of the farmers of America will get less than 6 percent of the total national income, and if you include Government payments, even with these figures added, the total farm income for this Nation is estimated to be only 6.6 percent of the whole. Nor is this all, for we must recognize the fact that, in addition to the artificial stimulation of other group incomes already referred to, we are now faced with the concentration of our national income in the industrial centers in connection with our national-defense program. The tremendous appropriations which this Congress is making for the national-defense program, practically all of which is being spent in the industrial centers, tends to complicate tremendously the already complicated farm problem. For instance, Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, states that—

> Contrary to the belief of many uninformed people, the war and the national-defense program will not ease, even temporarily, the farm problem. Today the index of farm prices is 104, but the index of prices paid by farmers is 123 and the index of labor's wages is 229.

I wish to say a few words about the South, since cotton has been particularly discussed. It is true that the economic structure of the South is built largely around cotton. I wish to quote from a report of the Department of Agriculture in its pamphlet, Cotton, Lands, People—page 2:

> The gross farm income per person for the 10 principal cotton States for 10 years 1924–35 averaged $184. For the first 5 years it averaged $238; and for the last 5 years, $127. The cash income is even more significant. For the first 5 years this cash farm income amounted to $190 per person and for the last 5 years it amounted to only $95. It is impossible to distribute such a small cash income so as to give an adequate purchasing power to the entire farm population. It is impossible to achieve or maintain even an un-American standard of living on an income that low.

Members of Congress, complaining about cotton legislation should consider that $95 a year is a mighty small cash income, and remember that every one of these people in this farming section of which I am speaking—the Southland—and I speak of that only because it was a discussion of cotton that provoked these remarks, every one of these people—every one of these farmers—pay their share of taxes; some more, some less, but out of that $95 a year cash income comes some of the taxes that go to make up our Government revenue which is financing the national-defense program, and which is being so heavily concentrated in the industrial centers.

In other words, what we are doing is taking, in the form of taxes, a part of the slender resources from these $95 a year farmers and sending it in the form of Government defense spending, into the industrial centers where there is already more money than they can use—where orders are piling up, and where there is actually a shortage of labor.

Expenditures for national defense, grouped geographically according to States, are as follows:

States of the Northeast	$7,368,449,597
States of the Northwest	2,057,082,933
States of the Southeast	1,875,926,560
States of the Southwest	899,100,077

The State of Louisiana is included in the States of the Southwest, which has received less than a billion in spending for defense.

Unless the Government and the Congress appreciates the significance of these figures and takes steps to correct them, there is bound to follow, in time, a heavy dislocation of our purchasing power, with a consequent additional strain upon our economic structure.

These figures mean something. I have put my own interpretation upon what they mean and I hope and believe that each Member of this body will do the same. To summarize: Including Government payments, the farmers of this country, comprising nearly one-third of our population, will get only 6.6 percent of the national income in 1941. And remember, according to the figures presented by Mr. O'Neal, the few dollars that the farmer gets as his share of the national income is indexed at 104, but the index of prices which must be paid by the farmer for anything he needs is 123. And the index of labor's wages is 229. Then add to this the other fact that the cash farm income for the 10 principal cotton States for the years 1931–35 averaged only $95 per person per year.

Mr. Speaker, $95 a year, out of which must be deducted whatever taxes are payable, leaves a mighty small purchasing power per person.

One of the most important problems we have facing us is how to keep the currents of trade flowing in this country. If all of the purchasing power of this country is concentrated in the industrial centers, there will come a time when industry can sell only to itself.

The largest market and the most desirable market in which American industry is offered today, without let or hindrance, is the American farm market. As the distinguished Member from Georgia [Mr. PACE] said the other day, "The greatest potential market for American goods are the farmers of America," and we must put purchasing power into the hands of the American farmer to offset the tremendous concentration of national income in the great industrial centers incidental to our national-defense program.

In the report of economic conditions of the South, prepared for the President by the National Emergency Council, issued under date of July 25, 1938, on page 61, it is stated:

> The South is the Nation's greatest untapped market and the market in which American business can expand most easily.

Our people want to buy American goods. Our section is already sold on the desirability of buying American. The only thing lacking is purchasing power, and this must be provided.

It must not be forgotten that it was a collapse on the home front that brought about the defeat of Germany in 1918. A collapse on the home front can be just as disastrous as would be a great military defeat.

Of course, we must maintain the slender Government assistance now being given to the cotton farmers, and in addition to that we should take steps to see that the national-defense program is decentralized. The President has declared that this is his policy and all agree that it should be done. We cannot expect the President to personally supervise every contract. With the tremendous burdens now confronting our President, he has a right to expect that when he announces a policy that those associated with him would carry that policy into execution. Everybody says, "Decentralize," but nobody is doing it. It is my personal opinion that the Members of Congress, cooperating with department heads who have already declared themselves in favor of decentralizing this program should see to it that this is done.

Down in my section we have a great deal of surplus farm labor. This is a cold and unimaginative phrase. It means that we have many people out of work who want to work, people who are hunting jobs.

We have had only one strike affecting any national-defense unit or program in the entire State of Louisiana, and that was settled in a few days. Some strikes that have been called in other sections of the country are, no doubt, due to alien influences. Alien influence in my section is very small. The surplus labor is there. The spirit of the people cannot be surpassed in any section anywhere. The decentralization of the defense program, too, will be a step in the decentralization of industry that our economists have long warned is an essential step in the solving of our farm problem. And then, finally, I do not believe that there is any possibility of this Nation arming itself properly and quickly through bottlenecks that have been caused by the tremendous concentration of orders with a few firms and contractors located in a few great industrial centers.

Mr. Chester C. Davis, member of the National Advisory Commission, in a speech in New Orleans, La., on March 15, last, made some very interesting observations. He said:

> I was somewhat shocked a few days ago to see a tabulation of the distribution of defense orders to date not as between areas but between industrial concerns. Included in the tabulation were eleven and one-half billions of prime contracts awarded between June 13 of last year and February 15 of this year. This tabulation includes all types of contracts. Of this vast total, between one-fifth and one-quarter had gone to 2 groups of companies of closely interconnected ownership. Between 40 and 45 percent had gone to 6 closely interconnected groups. And a total of 80 percent has gone to 62 companies or interrelated groups of companies. There is rich food for thought in these figures. I believe they are closely related to the mediocre success we have had in apportioning a part of this new defense industry to the States represented here today. Our defense contracts are being absorbed by

a small handful of concerns. The very smallness of the number threatens to be a serious bottleneck on the full use of our industrial and human resources. It is a bottleneck which must be broken.

Mr. Davis stated elsewhere, in the same speech, that:

Up to March 1, plans have been completed for the construction of some 302 new facilities for defense production. Of these, only 24, valued at $166,271,660 have been located in the 11 States (southern) I have just listed, as compared with 302 at a cost of $1,574,523,000, in the rest of the country.

Mr. Speaker, this defense program must be broken up and decentralized. Never can we obtain the speed and volume required by the fearful emergency now confronting this Nation if we fail to recognize the danger inherent in the centralized policy as pointed out by Mr. Davis.

Mr. Speaker, I have made these remarks only through a sense of justice and fair play to the American farmer. Every day the sowing, the plowing, and the reaping is done in season. The milk, the bread, the meat to feed, and the cotton and the wool to clothe the people is produced—in good weather or in bad; in hot sunshine or in icy rain, the work goes on that a people may be fed and clothed. In this basic industry alone, there never rises to plague the Government or the people, the spectre of strike or walk-out. Transportation may cease at someone's nod; industry's wheels may stop because of jurisdictional proceedure or quarrel; the earth may cease to give up her fuel because of some difference between operators and miners; the sound of the hammer and saw may die away at some barracks—a building to house our boys—because of economic friction. But nothing stops the farm or the farmer. In season and out; in summer's heat and winter's cold; come good years or bad, the farmer works at his allotted task, that a people may be clothed; that men, women, and children may eat.

If a profit comes from his labor, he furnishes industry with its best customer, and, if at the end of the year the farmer shows no gain, industry suffers. But with that enduring hope that has been his throughout the ages, he bends his unyielding back again to the unending task of making a living for his loved ones, and to clothe and feed the world. Begrudge him not the little that he gets from a Government that is so lavish in its gifts to others.

The Automobile's Contribution to the Tax Structure

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. RABAUT. Mr. Speaker, all of us feel the burden of taxation, but the largest contributor to the support of our Government is the automobile industry. This is the same source which has done more to raise the standard of living in this country than any other. A recent study has demonstrated the importance of the automobile in the national economy and national defense.

Both the Federal and State Governments share in the taxes paid by the automobile industry. The tax burden has increased every year, except in 1938, since it was first discovered as an excellent producer of revenue. It has increased 50 percent in the last 10 years.

Based on the increased activity of the automobile last year over 1939, when a new record was set, estimates of tax collections in 1940 are made as follows:

State gasoline tax	$865,000,000
State registration receipts	450,000,000
Federal gasoline taxes	248,000,000
Federal excise taxes	134,000,000
Personal property and tolls	56,000,000
Municipal and county taxes	16,000,000

These separate sources aggregate the record-making sum of $1,872,000,000 without including an estimated amount of $105,000,000 in general retail sales taxes in 25 States. When compared with the 1939 automobile tax bill of $1,636,549,000, the 1940 estimate appears to be surprisingly conservative.

Thirty-eight percent of all tax revenue of the 48 States is paid by motorcar operators, and gasoline taxes constitute the largest single item of revenue. Originally, the State gasoline tax was imposed to help bear the burden of building roads, but the huge amounts obtainable from this source supplied the first opportunity to use motorcar taxes for general purposes. Thus about 16 percent of these taxes are diverted by the States.

When the United States entered the first World War, Congress utilized the revenue-producing possibilities of the automobile by imposing an excise tax. This was discontinued in 1929, restored again as an emergency measure in 1932, and boosted for defense purposes in 1940.

Thus an emergency automobile tax remained as a permanent tax for 9 years, producing approximately $1,000,000,000. Proposals to increase it from 7 to 25 percent seek to continue it in effect as a source of revenue for defense expenditures.

What does taxation of automobile transportation mean to the motorist? It means that on a per-car basis, the average new-car purchaser has to pay $40 in taxes of various kinds before he is allowed to use his car on the highways.

Add to that, 32 cents of every dollar he spends for gasoline, together with taxes on any accessories he may install in his car, or parts replaced, and he may be near or well over the $55.83, which has been estimated as the average tax for the 31,800,000 cars in operation in 1940.

To the tax-producing value of the automobile industry should be included more than 40,000 automobile dealers, thousands of gasoline station and suppliers, all paying substantial sums from their business operations.

Certainly, in view of its importance in the American economy and the fact that automobiles are already contributing more than their just share of taxation, careful thought should be given to imposing additional taxes which might seriously disrupt so vital a cog in our economic machine.

By reducing the number of new automobiles which will be available for next year's market, the automobile industry has already made a substantial contribution to the defense effort. Without doubt, further curtailment will be readily forthcoming should the future conditions indicate the necessity of so doing.

Wisdom demands that punitive taxation be avoided.

Choctaw County Defense Meeting

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

LETTER TO PRESIDENT ROOSEVELT AND RESOLUTIONS ADOPTED AT CHOCTAW COUNTY (OKLA.) DEFENSE MEETING

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a copy of a letter to President Roosevelt from Harvey M. Black, chairman, and a copy of the resolutions adopted at the Choctaw County defense meeting held in Hugo, Okla., on May 4, 1941.

Many of our citizens are becoming alarmed by the delays which are blocking the progress of our national-defense program and "all-out aid to Britain," and I understand that similar meetings are being planned in other counties in my district calling on the President, the Congress, and the American people to subordinate all private industry and private interest to the defense program and make all sacrifices necessary to arm the Nation for its defense in this time of crisis.

The letter and resolution follow:

MAY 6, 1941.

President FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Approximately 1,500 citizens of Choctaw County attended a defense meeting held in Hugo at the Hugo stadium Sunday afternoon, May 4. Rain began to fall just before the program opened and it became necessary to move to a local church where about 1,200 persons were present.

The meeting was not sponsored by any organization or any political group. It was called by a group of citizens for the purpose of learning the sentiment of the people.

Following a discussion of the different phases of existing emergencies a resolutions committee was appointed and directed to preserve the sentiment of the group in written resolutions. The report of the resolutions committee was adopted unanimously, and, as chairman of the meeting, I was directed to send a copy of the resolutions to you, together with a list of those persons attending who registered, as an indication of the opinion of Choctaw County citizens with regard to matters of national defense.

The original registration is on file in the office of the secretary of the chamber of commerce in Hugo.

Sincerely yours,

HARVEY M. BLACK,
Chairman, the defense meeting.

Whereas we citizens of the United States and residing in Choctaw County, State of Oklahoma, having assembled in Hugo for the purpose of considering the problems that affect the future of our Nation and the forces at large in this world which do threaten our liberty, our democratic form of government and the security of our Nation; and

Whereas we are conscious of the blessings of liberty and of peace; and

Whereas in this time of world-wide emergency we deem certain principles and purposes to be of paramount importance; and

Whereas we consider it proper to communicate to the President and the Congress of these United States as well as to all citizens thereof, our concurrence in these principles: Now, therefore, be it

Resolved, That we, the people of Choctaw County, State of Oklahoma, do call upon those in authority to immediately curtail or eliminate all production in fields which are not essential to national defense to the end that material, labor, and plant facilities may be released to the task of producing for national defense; be it further

Resolved, That both capital and labor be required to subordinate selfish or personal considerations to the immediate necessity of producing at the utmost speed those material things necessary for adequate national defense; be it further

Resolved, That those in authority be permitted to use every means at hand for the suppression of espionage and sabotage; be it further

Resolved, That we believe it necessary and proper that this country give all possible aid to all beleaguered democracies; and, further, that our Nation take such steps as may be necessary to insure the safe arrival of our material aid; be it further

Resolved, That we hereby notify those in authority that we as liberty-loving Americans are willing to make those sacrifices which may be necessary to defend our liberty and perpetuate institutions of democracy in this world.

The foregoing resolutions are presented by your resolutions committee on this the 4th day of May, 1941.

FORREST M. DIVINE, *Chairman.*

Members of Committee:

W. C. Henry, W. B. Harris, John A. Bryan, John W. Jones, W. Bayless Irby, J. M. May, R. W. Harkey, L. Roy Patterson, L. E. Ferguson, R. C. Newton, Jake B. Cobb, C. A. Kimmons, E. M. DeWeese.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

RADIO ADDRESS BY HON. WALTER C. PLOESER, OF MISSOURI

Mr. SHORT. Mr. Speaker, on Monday evening, May 5, 1941, my distinguished colleague, the gentleman from Missouri [Mr. WALTER C. PLOESER] delivered a very interesting and able address on the proposed Great Lakes-St. Lawrence seaway and power project. His exposition of this subject is so lucid and his arguments are so logical that any reasonable man should be convinced that it would be most inadvisable for this project to be constructed at this particular time. Under leave to extend my remarks I include the enlightening broadcast by Mr. PLOESER.

There is a proposal before the Congress of the United States which, if enacted into law, would surrender control over Lake Michigan to a foreign nation. While the foreign nation, Canada, is our friendly neighbor, this in itself constitutes no justification for yielding sovereignty over any part of the United States.

The proposal to which I refer is the billion-dollar Great Lakes-St. Lawrence seaway. This is a plan to open the Great Lakes to ocean traffic and international trade by building a 27-foot channel through the lakes and rivers from Lake Superior to the mouth of the St. Lawrence River in Canada.

This seaway, as projected, would be built jointly by the United States and Canada, with the bulk of the cost falling on the American taxpayers. Aside from the cost, this project, if constructed, would enable foreign nations, with their control of the world's shipping and their cheap labor, to invade our own great inland industrial and agricultural empire. It would likewise irreparably damage American labor, agriculture, rail transportation, motor transportation, and industry in general.

This project came before the United States Senate in 1933 as a treaty. It was rejected by the Senate in 1934. Now it is presented to the Congress as an agreement. It is really a treaty being presented under a false name. It takes only a simple majority vote of both Houses of Congress to pass a resolution approving an agreement, while the ratification of a treaty in the Senate requires a vote of two-thirds majority. We can all readily understand why it is now called an agreement.

This treaty involves our sovereignty over Lake Michigan and it is my purpose this evening, in my limited time, to discuss this particular phase of the subject.

The Treaty of Paris of 1783 ceded all the territory east of the Mississippi River to the complete sovereignty of the United States.

The Great Lakes, all save one, became the common boundary between a part of Great Britain's Colonial Empire, Canada in the north and the young American Nation in the South. This one lake was Lake Michigan. Michigan was wholly within and a part of what was then called the Northwest Territory.

In 1787, our Federal Government, before the adoption of the Constitution, moved to protect this territory. Congress sent troops to protect the frontiers and set up a system of government. The Ordinance of 1787, which provided for the Northwest territorial government, made complete American sovereignty over all this country. It then became an integral part of the States.

Lake Michigan then became an exclusively American lake under the full ownership and protection of the American flag.

The United States Constitution recognized the acts of the Confederate Congress as organic law of the land. By Confederate Congress, I refer to the Congress of the Confederation of States prior to the adoption of the Constitution.

The sovereignty of the lake has been continuous and unchallenged since 1787—more than 150 years. I emphasize this point because attempts have been made to divide sovereignty over Lake Michigan. In the peace treaty negotiations resulting from the War of 1812, the British again attempted to acquire the Great Lakes. It is reported in the British papers recording the negotiations by the British and American plenipotentiaries at Ghent, that Great Britain demanded the possession of the Lakes with an exclusive right of building forts and maintaining ships of war, and that the Americans be precluded from establishing the same either on the Lakes, or the rivers, flowing into them. All the Lakes were demanded, including Michigan. But the British vacated this position under the American threat of continuing the war. The British delegates were severely reprimanded at home for yielding this position. Negotiating this Treaty of Ghent, which the British protested, were such great Americans as John Quincy Adams and Henry Clay.

Again in 1909 Great Britain and Canada attempted to include in the treaty with the United States, which is now referred to as the treaty of 1910, a provision limiting diversion from Lake Michigan and to again name it as a part of the boundary waters. Elihu Root, then Secretary of State, refused to agree to this limitation. Secretary Root explained to the Senate that his reason for refusing to agree to this provision was that Lake Michigan was an all-American lake, entirely within our country. He refused to have anything in the treaty about Lake Michigan.

To those people who do not have a clear mind's-eye picture of Lake Michigan and its relative location, I suggest that at your leisure you consult a map. You will find that Lake Michigan and the entire Lake Michigan watershed are within the boundaries of the United States. It is truly all American. I remind you that it is your and my duty to keep it and all other parts of the United States all American.

Being unable to get the Great Lakes-St. Lawrence waterway project ratified by the Senate in 1934, the President is now attempting a devious method. This method directly usurps the constitutional prerogatives and responsibilities of the United States Senate.

The present agreement, if ratified by Congress, will bring to a successful conclusion Canada's and Great Britain's hope to internationalize Lake Michigan. They will have achieved a notable diplomatic and territorial victory. They will have accomplished that which the Congress of the United States and the Senate have consistently refused to concede. It will be a surrender without recourse.

In my opinion, to consider this treaty as an agreement before Congress is not only a direct affront to the United States Senate but illegal and unconstitutional.

To me it is certainly undesirable for the United States to surrender this lake. I wonder what the people of the Pacific Northwest would say if the Congress yielded sovereignty over Puget Sound to Canada; I wonder what the people of the great State of New York would say if Congress yielded sovereignty over Lake Champlain, or more important the great Hudson River, to some foreign nation. I wonder what the people of the States on the Gulf of Mexico would say if Congress yielded joint control and sovereignty over their great Gulf ports to Mexico, or to some South American republic. I wonder what the people of the Southwest, and particularly the State of California, would say if the Congress yielded joint control over San Francisco Bay to Japan. Coming from Missouri, representing St. Louis County and a part of St. Louis City, both on the Mississippi, I think I know what the several great States of the Mississippi Valley would say if the Congress yielded joint control over the Mississippi River or the Missouri River or the Ohio River to any foreign nation. I can

foresee the wave of resentment that will sweep this Nation when the full implications of this project are understood.

Few people will be misled by the claims of the administration and the proponents of the seaway that it is a defense measure. Experts are generally agreed upon the fact that this project once undertaken will take a minimum of 8 years and probably more for its completion. But there is a new habit here in Washington of putting the defense label on almost every kind of money-spending and money-wasting scheme to help it through the Congress.

So the St. Lawrence seaway has been called a national-defense project. In the present emergency, it would seem that, at least for the time being, we should not be concerned about instruments for national defense which attainment would be from 8 to 10 years in the future. Our job today is to concentrate on our immediate national defense.

The taxpayers of this Nation, struggling under increasing burdens, should be given every opportunity to express themselves on this St. Lawrence seaway project before they are called upon to shoulder the additional burden it will impose upon them. No other course is fair to the taxpayers. No other course is honorable by the Congress.

In the past Lake Michigan has contributed immeasurably to the national defense. Her shipyards and docks have served as training grounds for men in the marine industry. Our own Great Lakes Naval Training Station consistently trains huge groups of young men for service in our Navy.

Lake Michigan was selected for the site of this naval training station because it is in the middle of the continent, surrounded completely by American soil, and without an inlet that would make its siege or destruction possible by an enemy fleet. Here in security every phase of naval warfare and navigation may be taught with economy and safety.

It is neither wise nor consistent with national defense to surrender or share the great natural advantage we have through the undisputed possession of Lake Michigan.

There is another reason why we should retain our undisputed control over Lake Michigan. The day may come when we will need her broad expanse of water for a protected inland naval aviation base. It should be clear to all my listeners that if this really were a defense measure the proponents would be trying to safeguard our interests in Lake Michigan instead of trying to give them away.

It is my intention to discuss publicly other tremendously important economic features of this project in the near future. How this project would be injurious to American labor, agriculture, commerce, and industry are questions which directly affect the lives of all Americans. The public is entitled to be fully informed.

Tonight I stress two main points: First, Lake Michigan is, and for more than 150 years have been, an all-American lake, a part of the United States of America. Second, that the present attempt is but a renewal of old attempts to obtain the surrender of our sovereignty over Lake Michigan.

I am sure the American people are unwilling to surrender sovereignty over Lake Michigan. I am equally confident they will not allow their Representatives in Congress to surrender sovereignty over any part of the United States—land or water.

Gerrymander

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

RADIO ADDRESS BY HON LAWRENCE J. CONNERY, OF MASSACHUSETTS

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by my colleague from Massachusetts, Hon. LAWRENCE J. CONNERY:

Friends of the radio audience, I am pleased to be privileged to address you in the name of Massachusetts democracy. I speak to you not as a partisan nor one seeking any special privilege for the Democratic Party but as a citizen of Massachusetts demanding that the right of our people to be represented in the Congress of the United States by persons of their own choosing be protected and preserved. And I bespeak an opportunity for the people of Massachusetts to be represented in the Congress of the United States by those who represent the views and wishes of the majority of our people.

Because of the national census of 1940, Massachusetts suffers the loss of one Representative in Congress. Therefore, it becomes necessary to reapportion the State into 14 districts. This means that for the next 10 years, until the 1950 census is taken, Massachusetts will have 14 Representatives rather than 15 in the House of Representatives in Washington.

The law requires that the reapportionment shall be based upon an allotment of approximately 308,000 people to each district, and that each district shall be contiguous.

A legislative committee, composed of members of the Senate and the House of Representatives of the Massachusetts General Court, has been given the responsibility of this redistricting.

It is not my desire to question the sincerity of those who have been entrusted by the Legislature of Massachusetts with this arduous task. But it is my desire to call your attention to the efforts of a few who seek to influence the decisions of those who make up the redistricting committee, thereby attempting to deprive you and millions of others in Massachusetts of being represented in Washington by those you would choose to represent you.

Some 2 or 3 weeks ago a so-called plan for redistricting the State congressional districts was presented to the Democratic members of the redistricting committee. This plan, which I understand, for the moment at any rate, has been tossed into the background, seems to me is so vicious and its intent so plain that I doubt that it could be tolerated, let alone accepted, by anybody—Republican, Democrat, or Independent. Republican Members of Congress with whom I have talked have frowned upon the unfair proposition with distaste.

The plan contemplates the carving of Massachusetts in such a way as would make certain the election of 12 Republicans and only 2 Democrats, totally eliminating 4 of the 6 Democrats now Members of Congress; FLAHERTY, HEALEY, and CONNERY would be resident in the same district and thereby either be forced to contend against each other or resort to the graceful retirement of 2 of them in favor of the other. The remainder of their carved districts would be so overwhelmingly Republican in complexion that it would be virtually impossible for any Democrat to win. In addition to this, the present districts of Democratic Congressmen ELIOT and CASEY would be made solidly Republican in character. Altogether these maneuverings completely eliminate 4 Democratic Congressmen.

This plan is typical of what some representatives of vested interests, those who in one way or another are constantly endeavoring to demonstrate their influence on Beacon Hill, would like to impose on our people; their intent being to deprive the liberal-minded people of our State of the right to be represented in Congress by more than a bare minority.

It is said by some that Massachusetts is a Republican State. I think it better to say that Massachusetts in days gone by was a Republican State. During the past decade the people of Massachusetts have elected as their Governors for a period of 7 of the 10 years, representatives of the Democratic Party. Despite the gerrymandering that took place 10 years ago, 6 of your 15 Congressmen are now liberal Democrats. In other congressional districts a change of a few thousand votes would have sent a Democrat rather than somebody else to Congress. During all of this period, and for 10 years prior thereto, your senior United States Senator, DAVID I. WALSH, has been a representative of the Democratic Party. President Franklin D. Roosevelt has carried the State of Massachusetts in every election; in fact, the Democratic candidate for the Presidency has carried the State on every occasion during the past 16 years.

Massachusetts at its last election, in its contest for Governor, indicated the even political party division that exists in the State by electing as Governor a man who received only one-fifth of 1 percent more votes than his Democratic opponent. The contest was so close that a recount was necessary. A change of less than 3,000 votes would have installed the Democratic candidate as your Governor.

The people of our great State are keenly concerned with legislation enacted by the Congress. Representation by men of liberal thought and action is vital to the welfare of our people. The Nation is proud of the able and conscientious leadership of our courageous majority floor leader and our Massachusetts Democratic colleague, Congressman JOHN W. MCCORMACK; Congressman ARTHUR D. HEALEY is a member of the all-important Ways and Means Committee; Congressman JOSEPH E. CASEY serves on the equally important Appropriations Committee; Congressman THOMAS A. FLAHERTY plays an important part in the building of our great new Navy through his membership on the Naval Affairs Committee; Congressman THOMAS H. ELIOT holds enviable membership on the outstanding Judiciary Committee;

while I have the honor of being the only New England member, Republican or Democrat, on the Labor Committee.

This representation means something, in fact a very great deal, to all citizens of Massachusetts.

I make no plea for these Representatives as individuals, but I do demand that those they represent be not deprived of their right of free choice.

It is my hope, therefore, that you will make your voice and your opinion felt with the members of the redistricting committee from your locality, to the extent at least, that in redistricting the State there shall be no gerrymandering, no finding of a soft place for any outstanding representative of vested interests.

There is no good reason why countless of our citizens should be deprived of the privilege of being represented in Congress by those who represent their views, in order that some ambitious persons, temporarily holding high public office in the Legislature of Massachusetts, may benefit by having seats in Congress carved out for them.

Let us hope, too, that the redistricting committee will be able to withstand the pressure of these attempted influences and agree upon a redistricting bill that will give to you and yours the right which you, as free Americans, should retain as a priceless heritage—the right of free selection.

I have stated that I do not desire to address you in a partisan spirit. I am happy to say that for the most part in these days of dire emergency there is very little partisan spirit among our people. I trust that this spirit will continue. Men may and do differ in their political views. For America it is good that this is so. For such differences of opinions and views are the very lifeblood of the freedom of a democracy. And true representation gives voice to all views and opinions. If we are to continue to maintain a true Americanism in Massachusetts then we cannot tolerate the stifling of so many hundreds of thousands of Democratic voices by silencing their chosen representatives.

I speak for fair play—for proper division of our State into the necessary 14 districts. I protest and join with many thousands of Democrats, Republicans, and Independents alike who are voicing their disapproval of any tactics in redistricting which can only result in a proclamation to the other States of our Nation that, to her everlasting disgrace and discredit, the iniquitous so-called gerrymander has been permitted to again run rampant in Massachusetts.

A Plea for Spiritual Solidarity

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

SERMON BY REV. JOHN J. REILLY

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, with pride, I place in the RECORD the sermon delivered on Sunday, May 11, 1941, by the Reverend John J. Reilly, director of the Shrine of the Immaculate Conception at Catholic University, Washington, D. C., on the occasion of the solemn pontifical mass for the visiting South American naval officers:

"Of them whom Thou hast given me, I have not lost one—I will give them life everlasting and they shall not perish forever, and no man shall pluck them out of my hand."

These words are the words of our blessed Lord, but how beautifully apt they are today, for today they are celebrating Mother's Day, and these words fit well on the lips of all real mothers. And how doubly fitting they are today as the National Shrine of the Immaculate Conception acts as host to you distinguished representatives of our sister American republics. Most of us are conscious of the tributes we owe our natural mothers, and most are conscious, too, of the Mother, Christ bequeathed us as she stood at the cross' foot—in whose honor this shrine is being built, and most prefer to think in terms of America as our mother, and why not? She has shown us all the tenderness and care any mother could have shown. She has provided for us, too, as mothers do for children; she guards us; she protects us; she pours out her wealth, her riches, her everything that God has given her, without stint or calculation, and as any mother she will not hesitate to sacrifice herself on any altar her enemies may fashion or construct. America can hardly be considered in any other way but as a mother, a prolific mother, too, as God would want her to be with her many children north and south, symbolic, too, of her Son's cross, the Son whom you enthroned in Rio, for the arms of the cross of that same Son stretch to the north and to the south just as well as to the east and to the west. The arms of the cross were all embracing, and so, too, were His mother's arms and the words of Christ have never seemed so apropos as they do these days on the lips of our mother America. "Of them whom Thou hast given me I have not lost one, and I will give them life everlasting, and they shall not perish forever, and no man shall pluck them from my hand."

Any mother who claims this must be disturbed from time to time, and America is disturbed right now, for such a boast, "Of them whom Thou hast given me I have not lost one," holds true only insofar as solidarity exists among such a mother's children, and solidarity has never suffered the way it has of late. The only solidarity bearing up right now against destructive forces is the solidarity of a spiritual kind. The spirit alone in Europe remains as an unbroken thing, the material ties that bound the nations are scattered through the length and breadth of all that land. America has taught the nations many things, but nothing she has taught them will ever have the value of the lesson she can teach right now—two continents spiritually so close no man can pluck one from the hands of Christ of Rio and Mary of Washington.

In view, then, of the need of a spiritual tie that will bind the children of one Mother America, we bid you most welcome to this National Shrine of the Mother of God, for whether you have ever been aware of it or not, there is a vast portion of thinking North Americans who consider there is more real power for peace and happiness in America right here in Mary's shrine than down there in the War Department. In no part of the United States should you feel more at home. They will point out many things of interest in this grand land, but you could return without getting the true picture of the United States, your neighbor. We know you will be glad to hear that Christianity and the things that are dear to Christ are doing very well right here. We think not in terms of any new order, or not in any terms of an old order; we are thinking in terms more eternal than both; we are thinking in the reign of Christ, and in spite of what our movies may have made you think, and in spite of how our salesmen have impressed you, this which you behold today, a mass in Mary's shrine, on the grounds of the Catholic University, is more a part of the real United States. They will do some window dressing for you—all tours of the kind do that. This is part of the America you see every day. This will remind you of your homeland. This will tell you more than anything of the possibilities within the great big American heart, for friendship and for solidarity. We dream the same dreams; we think the same things; we pray the same prayers as you.

Can we touch you then when, we invite you to turn with us toward a common mother, a mother that stands at the foot of the cross from time to time, a mother to whom we flee in time of war, a mother to whom we turn in time of peace, a mother big enough to embrace us all, a mother who can truly say when she thinks of both of us, "Of them whom Thou hast given me, I have not lost one"?

We bid you welcome then to the sanctuary of the United States, the place where you see holy things, to the place from which is radiated spiritual energy, and here at Mary's Shrine today, our prayer is that the Americas' shall always be big, big of body and big of soul, and big of heart. Mindful of the pains and sacrifices, and triumphs of the past, and conscious of our blessings here and now the prayer of all Americans should be for all our blessings, for all our benefits, for all our crosses, and for all our happiness, thanks, O thanks be to God.

Christ of the Andes, Christ of Rio, Mary of Washington, preserve the Americas. Keep them close as children of one mother. They have done as much for you as all the world. They have crowned their highest mountains, they have made more beautiful their Capital City with memories of you. Keep them safe from the forces that tried to keep you apart. Keep them safe in the American way, for the American way, O Christ and Mary, we think is the nearest way to Your way. Ad majorem Dei Gloriam.

Igor I. Sikorsky and the Helicopter

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. SHANLEY. Mr. Speaker, an editorial in the Sunday New York Times on the remarkable feat of Igor I. Sikorsky brings national eminence to the romantic career of the man whose name is indissolubly linked with that of Stratford and Bridgeport, Conn. No one who has read the Story of the Winged S, his autobiography, will ever forget the unflinching devotion to an ideal that characterized the youngest son of a professor of psychology in St. Vladimir University at Kiev.

I am taking advantage of my unanimous consent to insert the editorial:

[From the New York Times of May 11, 1941]

HELICOPTERS

A new world's record for sustained flight in a helicopter has rewarded the persever-

ance of Igor I. Sikorsky, better known in the world of the air for his large-scale transocean flying boats. With the designer at the controls, a strange-looking aircraft, requiring only 90 horsepower, hovered one day last week over an area no larger than a tennis court for an hour and a half. More significant than the breaking of a record, however, was the demonstrated ability of the Sikorsky machine to make vertical ascents and descents, to fly backward and sideways as readily as forward, and to maintain position with no forward speed, at the will of the pilot.

These characteristics raise many implications of interest. The new machine is relatively inexpensive to build and lends itself readily to mass production. It could be manufactured without important interference with any other aspect of the military-aircraft program. This being the case, it would seem that an aircraft which can operate successfully from a platform 40 feet square, has forward speed in excess of 100 miles an hour, can hover at will for observation and furnish a still platform for the firing of aircraft cannon or the dropping of bombs is worth serious consideration as a weapons of protection for merchant ships against submarine attacks.

To fit such ships for the use of helicopters would require no slow or expensive structural reinforcement, while the utility of aircraft of this kind for submarine spotting and destruction might well be very great. One of the secrets of Axis military successes thus far has been the willingness of the German command to make use of new weapons and new methods. It certainly would be worth while to find out without delay whether, in the helicopter, we have not a weapon which could be of great value in the bitter battle of the Atlantic.

European Food Situation

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Thursday, May 8), 1941

ARTICLE BY DR. J. I. FALCONER, OF OHIO STATE UNIVERSITY

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the European food situation, by Dr. J. I. Falconer, of the department of rural economics of the State University of Ohio, as published in the Ohio Farmer of the issue of April 5, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Ohio Farmer of April 5, 1941]

THE EUROPEAN FOOD SITUATION—"OCCUPIED" COUNTRIES FACE STARVATION

(By J. I. Falconer, department of rural economics, Ohio State University)

One of the much-discussed subjects of today is whether we should ship food to relieve the hunger distress in the occupied countries of western Europe. Of the 37,000,000 people in Finland, Belgium, Holland, Norway, and central Poland, great numbers are reliably reported to be facing starvation and disease. The situation is already critical in Belgium. The situation among the 15,000,000 people in unoccupied France is much the same. Of this situation there is little doubt. The problem seems to be whether starvation among these people can be prevented without playing into the hand of Germany.

Even in normal times continental Europe is short of certain essential foods and feeds. During the 5 years preceding the outbreak of war, between 5 and 6 percent of the bread grains consumed were imported, as were 8 percent of the feed grains, 90 percent of the feed concentrates, 68 percent of the vegetable oils, and 40 percent of the total fats.

HARVESTS POOR LAST YEAR

These deficiencies have become greater as a result of poor harvests, and it is generally agreed that disorganization due to military activities and the blockade have contributed to the shortage. Fish and whale oil are in normal times an important source of food and fat for continental Europe. Since the beginning of the war scarcity of gasoline, with which to power the fishing boats, together with restrictions on the movements of fishermen have greatly reduced the supplies of sea foods. The acute shortage of feed grains and concentrates means rapid depletion in livestock numbers which in turn decreases at an accelerated rate the supplies of meats and animal fats for human consumption.

One of the elements in the present food situation in Europe is the unequal distribution of the food supplies. Europe lost a portion of her surplus food-producing regions when Russia took over the three Baltic states, the provinces of eastern Poland, Bessarabia, and northern Bukovina, as well as 10 percent of Finland's agricultural land, including some of her best. Even so, it is not likely that Russia will provide Europe with any considerable quantities of food. The standard of living in Russia is low. Large food exports would tend to lower her already low standard of consumption. Furthermore, it may not be possible for warring Europe to produce the necessary manufactured goods to exchange for Russian food.

CAN EXPECT NO FOOD FROM BALKANS

The Balkan countries are nominally a surplus-grain-producing region. But the 1940–41 harvest suffered from adverse weather conditions. Even with the return of normal yield, the surplus grain would fall far short of continental European requirements. Furthermore, it is certain that the distribution of any surplus will not be made on the basis of nutritional needs but will follow the dictates of political expediency. There is little likelihood that exports from this region can be markedly increased except at the sacrifice of supplies needed for domestic consumption.

The countries facing the greatest difficulties from the standpoint of food supplies are Belgium, Norway, central Poland, Spain, France, Holland, and Finland. In contrast with the situation in these countries, Germany presents a different picture.

Before the war broke out Germany boasted that she was 83 percent self-sufficient in the way of food supplies, a position much more favorable than in 1914. In bread grains, Germany had become self-sufficient at the beginning of the present war and in addition had accumulated substantial reserves. The wheat acreage at the beginning of this war was 40 percent larger than in 1909–13. The greatest shortage appears to be in meats and fats, but even here the direct fat ration is now about 10 ounces per capita per week, as compared with 4½ ounces in 1917. It would appear probable that with her imported labor supply Germany can maintain her present agricultural output and that she will draw upon the available supplies in Europe wherever she can obtain them.

BELGIUM IN WORST STRAITS

Among the occupied democracies on the Continent the situation at present appears to be the most critical in Belgium. This little Nation with a population of about 8,300,000 is the most densely populated nation in the world, with a population per square mile four times that of Ohio. Moreover, less than 20 percent of those gainfully employed are engaged in agriculture.

As a result of this large city population, Belgium normally imports from non-European sources one-half of her food requirements. Add to this the poor crops of 1940, the destruction by invasion, and the inability to import feed for livestock as well as food, and it is apparent that the 80 percent of the population which lives in cities is in a desperate situation. The Belgium ration is already reported to be down to 960 calories, or less than one-half that necessary to maintain health. The lack of fats and other essential elements in the diet is causing devastating malnutrition, especially among the children.

All the evidence indicates a serious food shortage in the occupied countries. Can plans be developed for supplying the needed foods without helping Germany? The Committee on Food for the Small Democracies under the leadership of Herbert Hoover believes that this can be done.

THE HOOVER PROPOSAL

Features of the Hoover proposal are: That an experimental trial be made with Belgium. That 1,000,000 destitute adults, mostly mothers, and 2,000,000 children be fed by soup kitchens. That Germany ship into Belgium the necessary bread grains. That England permit the necessary fats, soup materials, and special foods for children to be shipped in through the blockade. That the food be distributed by a neutral committee agreed to by both parties.

It is further proposed that the imported food would be paid for by the Belgian Government in London, and that it would be shipped in vessels not now available to the British. To meet the objection that the supplies shipped in might be seized by the Germans, it is proposed to maintain such limited stocks on hand that if they were seized it would only amount to about one-half day's food supply to Germany. The plan would not be put into effect unless an agreement could be reached whereby the native food supplies would be protected. The plan is based upon the fact that feeding would terminate if there are violations by the Germans. If the experiment were successful, then it could be extended to the other democracies.

Aside from the humanitarian standpoint, there are other reasons which could be advanced for making the attempt to ship food to these distressed people in the small democracies.

The blockade is one of the main arms of the allied program of war. It has of necessity contributed to the shortages of food in the occupied countries.

Feeding these democratic peoples should help to maintain their courage and rebuild their morale.

WOULD FIX RESPONSIBILITY

It would increase the prestige of the United States and England as humanitarian nations by placing the responsibility for any failure to carry out the plan upon Germany, who could no longer say that it was the blockade which was responsible for starving innocent people.

Europe has been the market to which the American farmer has long looked for a market for his surplus farm products. Many of our own agricultural ills have resulted from the loss of this export market. Whatever we can do to maintain the good will of these small countries may mean much to us in the way of future markets.

That help now would be greatly appreciated cannot be doubted. At least it would seem worthy to make the attempt to feed these distressed people without giving material aid to Germany.

P. E. O.—A Torchbearer to the Present

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Thursday, May 8), 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD some remarks which I made at noon today before the P. E. O. convention held at the Shoreham Hotel in Washington.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure and a privilege to speak to you today on the subject P. E. O.—A Torchbearer to the Present.

Recently I talked to a certain group of women on the subject of our national economy. I called attention to the fact that in less than 90 days after the first of this year, Congress had appropriated over $16,000,000,000. The women didn't blink an eye at that. The fact didn't seem to register, so I turned to the mayor of Philadelphia, who was present, and asked him what the assessed valuation of the real and personal property of Philadelphia was. He answered, "A little over $2,000,000,000."

I then said to the women—"Congress has appropriated over eight Philadelphias in the last 90 days, and there aren't eight Philadelphias in this country of ours."

Recently I spoke to another group of women. This time I spoke on a political subject. I related the incident told to me in London in August 1939 after Mrs. Wiley and I had visited with Lloyd George and Mr. Churchill. It was related by Mr. Rhys Davis, a member of Parliament from Manchester. He said, "I hope we in England will have another year in which to prepare. Britain has been asleep to what has been going on. Some of our leaders have known it, but the nation hasn't realized it. We were lulled into security by the great dreams of your Wilson and by the hope that the League of Nations would provide some kind of security. Had Hitler struck 2 years before he would have found the English people totally unaware of the change in conditions—a people who would not have believed that war would come again. But in these last 2 years, our people have awakened to the fact that war is coming, but we are not prepared. There are two men who are entitled to be credited for the awakening in Britain. They are Hitler and Chamberlain. Every breach by Hitler, every promise broken, every treaty arrangement canceled, every neutrality violated, has contributed toward this awakening. Chamberlain's appeasement policy, together with Hitler's breach of faith has given our people a chance to see what is going on."

Today I am not going to speak to you women of P. E. O. and you B. I. L.'s about politics or economics. In this troublesome period, this group of 70,000 P. E. O.'s stand out to me as an exceptional group—an exceptional group in a world of stress and crisis—and the world needs you.

Yes; it needs you—your leadership, your level-headedness, your teachings—to overcome intolerance, injustice, hatred, lack of faith.

Your great objectives—faith, love, purity, justice, truth, tolerance, and growth of mind and spirit—have taught you something about the symphony of life. Browning says, "Life has meaning, and to find its meaning is my meat and drink." To you has been revealed the joy of being charitable, kindly, and loving. You know the joy of playing life's game with fortitude and courage and faith. You have learned the wisdom and the joy of guarding your tongue, of not indulging in slander, loose talking, and loose living. You have realized that in a troubled world you must give due regard to the rights and obligations of others. You have learned that exaltation comes from extending the helping hand to those who need encouragement—not simply to P. E. O.'s or people who go to your church—but to your neighbor, your neighbor's child, your community, your State, your Nation.

You know the value of a smile, a cheerful, kindly word in place of sarcasm, bitterness, and criticism.

How little it costs to be sympathetic—understanding. Yet sympathy returns a thousandfold to the giver. True sympathy dissipates the martyr complex. It heals the wounded spirit. It creates hope and gives courage so the fallen will arise and go forth, renewed to meet the problems of life.

Out of the P. E. O. have come great loyal friendships. While I know nothing specific about your secret work, I know that it does have the effect of making one dissatisfied with self if one is not living up to her best. You are not guilty of arrested development. You know growth is the law of life.

> "Thank God, a man can grow—
> Yes; grow away from his mistakes,
> And fears and limitations,
> To a fuller, grander life."

Luther always, when possible, had a rosebud in a small vase placed before him in his study. It suggested unfoldment, growth, development, the expanding life. When Goethe, the great German philosopher, came to die his last words were, "More light." Those who stood by his bedside thought he meant more candlelight, but that wasn't the case. Goethe was one of those great souls of whom it is said that when such a soul passes through the vestibule between this and the next life it can look both ways. Goethe threw back to tired humanity its greatest need—"more light." He saw that humanity needed, above everything else, the perspective that would lead it out of its self-created woes and troubles and wars. The Great Teacher said to humanity, "I am the light of the world." Without light there is is no abundant life.

In this period those of us who live so close to this world conflict often forget that we are called to be torchbearers, and this brings me to the subject of my remarks to you today—P. E. O., a torchbearer to the present.

Henley, in his Invictus, has said:

> "Out of the night that covers me,
> Black as the pit from pole to pole,
> I thank whatever gods may be
> For my unconquerable soul.
>
> "It matters not how strait the gate,
> How charged with punishments the scroll,
> I am the master of my fate:
> I am the captain of my soul."

The greatest light bearer of the present is that person who rekindles in human beings the desire for the free, the beautiful, and the serviceable life. Exaltation, or a trip mountainward, comes to such a person with such a torch.

Paraphrasing Henley's Invictus, we can say:

> "It matters now what faith we share,
> What hope and light we bring to man,
> We are the sculptors of the state,
> We are the builders of its plan."
>
> —*A. W.*

We beings are a composite of stardust and clay, but we must never forget we have an unconquerable soul. He who shaped you, shaped you with a purpose, with a purpose noble—not ignoble; shaped you with that something in you which impels you forward to accomplish great and splendid things.

Right now with the lights one after another dying down in other lands—going out temporarily—we must not permit that experience over there to diminish our ardor for the preservation of the American way and the great freedoms of which we are trustees.

The greater the challenge—and it is a great one now to you and me—the greater the responsibility to be fit to meet it. In a real sense, we are living in a great period—a challenging hour.

Some cannot tell whether it is a sunset or a dawn. Yet my faith tells me that the dawn is up ahead.

You remember Lord Byron's Sonnet on Chillon. Let me read it to you:

> "Eternal spirit, of the chainless mind!
> Brightest in dungeons, liberty! thou art:
> For there thy habitation is the heart—
> The heart which love of thee alone can bind:
> And when thy sons to fetters are consigned—
> To fetters, and the damp vault's dayless gloom
> Their country conquers with their martyrdom,
> And freedom's fame finds wings on every wind.
> Chillon! thy prison is a holy place,
> And thy sad floor an altar—for 'twas trod,
> Until his very steps have left a trace
> Worn, as if thy cold pavement were a sod,
> By Bonnivard—May none those marks efface!
> For they appeal from tyranny to God."

Yes; after the crucifixion came Easter morn.

There comes to my mind an incident told me by Senator HIRAM JOHNSON which illustrates how the people of San Francisco awoke from the paralysis resulting from the earthquake in 1901 and rebuilt the city.

This incident illustrates where you leaders come in—and truly you are leaders—in home, business, lodges, every contact. How much the world needs real leaders now—the leadership that will give poise to unbalanced minds, that will shoot courage and fortitude into the weak; that will loosen the fetters of narrowness and bias—give man a grasp upon his real self. Paul, writing to Timothy, said "God hath not given us a spirit of fear but (a spirit) of power and love and sound mind."

Not one of us in this period when so many people need our assistance, not one of us can pass the buck and say, "Let George do it." Each of you, who have received so much, so much of good, so much of what the world needs, must now go out and share that good. Everywhere there are those who need the right kind of stimulation, who need to be brought back to their moorings. Everywhere there are those who are fearful, hysterical, doubtful of the ability of America to come through, to meet the challenge. Let the God of confidence speak through you and you will see the fetters fall

I remember once hearing a bishop of a church say to his clergy—it was back in the troublesome days when the financial fabric of this country was breaking—

"I want you men who are shepherds of the flock, to go out and prove that you know what that means—'to be a shepherd of a flock.' I want you to go out and instill into those, whom you shepherd, a sense of courage and fearlessness. Now is your opportunity to show what the Wayshower meant when He said, 'I have come that you

might have life and have it more abundantly.' What your flock needs now is spiritual food, and if you have glimpsed your job, then you will be the great provider as He was."

Easter has been gone a month now. Surely the teachings of Easter dissipate one of man's greatest fears—the fear of dissolution. Easter teaches the continuity of the spiritual life, and when that truth is grasped we know there is no death. Leadership today calls for waking the slumberer—he who is asleep in his bed of fear and defeatism, he who lives only in the world of the senses, he who has never learned the art of rejoicing and giving of self.

While in this period, many of the old landmarks are disappearing, those which have been proved reliable and worthy are still with us. As leaders you can guard their integrity. Let me mention some of them—the Constitution of the United States and the Bill of Rights, and, in a spiritual sense, the Ten Commandments, the Sermon on the Mount, and the tried and proved principles reflected in your great objectives.

Amid the tumult and the stress of the present day, no organization has the right to exist unless it contributes constructively to the solution of our problems. One of the finest things that any individual can do for himself and for those he contacts is to develop a sense of poise and mental serenity. Many people just don't know how to do that. You do. You have found that in thinking great thoughts, in performing simple kindnesses, in glimpsing spiritual truths, in singing great songs and hymns, in developing a sense of humor, in getting rid of any arrogant egotism, in developing perspective, that the way opens up and you are building more stately mansions for your soul. In so doing, you are building yourself and the state strong and durable.

We have a job—we of this generation. And organizations like P. E. O., with its 70,000 members, have a bigger and more important part in the program of keeping America safe, building her strong, and preserving her values, than most people comprehend.

You and I are the beneficiaries of all the past; all the great saviors and prophets, inventors, explorers, statesmen, and builders, in all the generations that are gone, have builded for you and me. We are the heirs of all the past, and you and I are trustees of the finest product of all the efforts of all the past.

This beloved America! We had nothing to do with shaping her, but she is ours and some of us, and especially you women of P. E. O.—you leaders—have the job of making our people conscious of the great treasure they possess.

It has been said that the average student who is given the benefit of 16 years in the public schools and 4 years in schools of higher education does not appreciate that education because it is literally handed to him on a platter. Well, that is just what happened to each of us. We were born Americans, and because of that fact—all these great values which have costs thousands of lives, hundreds of years of human effort—all these values were given to us gratis.

What do I refer to? I mean the American way of life with its great freedoms of speech, of press, of worship, of trial by jury, the right of petition, the trial by one's peers, the right to sell one's own labor and collect one's own wages, and the right to own and sell property.

We know now, at least some of us do, that these rights will perish, as they have in other lands, unless we preserve them. We are awakening to the reality of the situation. We are conscious of a great world revolution which, if it should successfully strike our shores, would turn the hand of the clock back. In other lands, these great freedoms do not exist.

And what is worse, in many lands the common people are satisfied without them. Why are they satisfied? A great philosopher once said, "Give the people light and they will find the way." These people haven't the light we have. They see through a glass dimly, but they are groping for the light.

That is why, P. E. O.'s, you are torchbearers to the present. Your function is to bring a torch to the minds of America. Never permit them to get in a condition where they would be satisfied with turning the hands of the clock back. God meant that men should grow spiritward. From mortality to immortality defines the route.

There was once a great torchbearer who said, "I am the light of the world." What did He mean? His life and His deeds and His teachings showed what that light was. He taught men that they were not slaves—they were the sons of God. He taught them that riches consisted not in the abundance of things but in the possession of dynamic ideas of truth.

He shot them through with a conviction that they were not mud men—they were part of the eternal plan, things of the spirit.

He preached the idea that life had continuity, and on Easter morning He made good His preachment to a troubled world.

Human life is an enigma and yet the Great Teacher taught there was nothing enigmatic about the life of the spirit.

Our political system in this country is built upon the theory of checks and balances—a Government with legislative, judicial, and executive departments.

In these difficult times, people who devote a part of each day to a pursuit of the things of the spirit, form a tremendous check and balance against the onslaught of the things of force, intolerance, and violence. These people provide the check and the balance that will carry America through the storm.

Reason and common sense and faith—what a bulwark.

Let me illustrate how they work, using a practical illustration out of the present.

Everybody knows a great debate is going on in this country. It not only takes place in the Halls of Congress, but it absorbs more or less everybody's attention. I refer to the subject of convoys and intervention in the war in Europe.

Some politicians and some columnists (including the "fifth columnist") have befogged the issue. Bitterness and bias and prejudice interjected into the debate on both sides have done anything but clarify the issue. If you want to know how muddy the situation is, talk to almost anyone about it. The other day I had a rich experience. It was my privilege to visit with one who saw clearly through the mist of human irrationality involved in this debate. He said there were two questions involved in this debate, and that the people had a right to decide which course this Nation should follow.

First, should we convoy the ships of a combatant nation which undoubtedly will mean intervention in the world war? Or, second, should we not convoy such ships and still give all other aid possible?

There you have it. There is no need for name-calling or mud-slinging to decide which course to take. There are many legitimate arguments that can be advanced on both sides of this issue, but there are a great many more that run into the field of conjecture. They are the unknown factors of the future—the imponderables of the future. But certainly, to the thinking individual, there is no reason for anyone to become intolerant of the other man's viewpoint. Are we not all brethren dwelling in the same house—America? Are we not all of that great breed called American, even though we stem from different blood streams? Have we not all, the same vital interest in preserving our common heritage, our American way of life?

Like Nehemiah, each of us is called to rebuild the wall. What a thought, we are builders of a stronger, greater homeland.

A saying of St. Augustine comes to my mind: "Others wrangle, I wonder." Ah, this thinker, in the midst of confusion, saw the glory of life and God all around him.

Knute Rockne, the great football coach of Notre Dame, once said, "The idea is the thing." Yes; the straight thinker, unconfused and undefeated, is the great need of our times.

In this stressful hour, P. E. O., with its membership of 70,000 women, believing in, and practicing its great objectives, can help, through the lives of its members, to give inspiration—the Greeks called it the flame of the gods—and guidance to those who tend to be intolerant, hysterical, and unpoised. Thus you become your brother's keeper; thus you bring light where light is needed; thus to the troubled mind you bring balance and calm—the antidote to injustice, intolerance, and revolution—and thus you justify the subject of my remarks today, "P. E. O., a torchbearer to the present."

Years ago in a stressful period I phrased the antidote to confused thinking in this thought, with which I conclude:

"Today I am free—and why?
Because I laid away the shell of yesterday,
And with tomorrow's sunrise, I hope,
To lay away the shell I grow today.
New skylines burst upon my view—
I know it is the law of life to grow.

"So open wide, ye windows of my soul.
I fear no more—the quest is on,
A hunter for the spiritual goal,
The glory of a God-enraptured man.
Gone are the gods of yesterday—
Narrow creed, superstitution, hate, and woe!
Gone, with other dreams that limit me.
Today, today, I am free!"

—*A. W.*

The New Sugar Act

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Thursday, May 8), 1941

ARTICLE BY E. W. RISING

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article of merit, appearing in the April issue of the Sugar Journal, by E. W. Rising, executive vice president of the Western Beet Growers' Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sugar Journal of April 1941]

THE NEW SUGAR ACT

(By E. W. Rising, executive vice president, Western Beet Growers Association)

Yes; the lend-lease bill is out of the way, Congress has had its little vacation, appropriation bills are moving through smoothly, and there are rumors that consideration will soon be given to such matters as a new Sugar Act. As a representative of beet growers I am pleased to have this opportunity of making a few remarks.

Individually, we who are interested in the domestic industry are in agreement as to fundamental principles (excepting perhaps

the refiners), so there should no real difficulty in working out a program for securing a sugar bill that will protect the growers of beets and cane, employ a greater number of people, and provide for the sale of sugar produced from continental-grown products.

Our opposition will, of course, present a flood of argument well calculated to stir up jealousy and strife between the growers in different areas and in trying to run one group down a dead-end street in working for higher prices and another group in some other direction. Of course, we want fair prices for sugar; so does the manufacturer of automobiles, farm machinery, sewing machines, clothing, and every article we use. The cane and beet growers, however, do not want or expect any different or larger measure of protection than is given the fellow that manufactures the things they must buy. Price is by no means the main issue, but it will be one of the things talked about, with the idea of convincing the consumer that he has a great interest in this matter and may starve if he is asked to pay as much as 50 cents per hundred increased retail price for sugar, meaning $1.50 to $2 per family per year.

To secure the legislation we need we must agree upon two things:

First. That continental growers are entitled to as much of the market as they can supply, and this without apology to or permission of anybody. Just good old American horse sense, to be applied for the benefit of the farmer, in equal measure as applied for the benefit of the manufacturer. We will not continue to hold the largest share of the American market for manufacturers of our automobiles, farm machinery, etc., without measures calculated to reduce imports from foreign countries. There is certainly no justice or sense in the contention that we should have one system of protection for one type of manufactured articles produced by American labor and another practice for beet and cane growers and farm labor. No; I do not object to the good-neighbor policy, but I do object to a policy of so-called reciprocal trade that is run for the benefit of the eastern manufacturer and with little consideration given to the needs of the farmer.

Perhaps it might be a good idea if the growers of the beet and cane sections and the people of the cities and towns in those areas were to organize and do a little fancy trading with the areas that are now enjoying heavy trade balances from the farm areas mentioned. Why not arrange a reciprocal-trade arrangement for exchanging our sugar and other farm products for electrical products, generators, motors, pumps, household appliances, farm machinery, etc., on a 50–50 basis. The industrial East does not seem to know that trade balances with the sugar-producing sections are running as high as 8 to 1 in its favor, while countries now taking eastern manufactured articles under the much-advertised trade agreements seldom go above the 1-to-1 basis.

Regardless of the fact that I believe we are entitled to as much of the continental sugar market as we can supply, I am willing to adopt the basis suggested by Senator ELLENDER in his remarks in the United States Senate on March 13, 1941, and from which I quote, as follows:

"I have advocated since 1937 that by all means our continental sugar producers should be permitted to produce at least 40 percent of our requirements."

While I accept that suggestion I cannot help but wonder how the manufacturers of automobiles, farm machinery, and a thousand other articles would feel about the allotment of 60 percent of the continental market to manufacturers located in Cuba, Hawaii, and the Philippines.

Second. The bringing together of those who have greatest interest in securing increased acreage for cane beets and using joint efforts to carry out a program. There are three groups that have a special interest at stake—first, the growers; second, labor; and, third, the processors. There are now 70,000 beet growers, 90,000 field workers, and over 10,000 processing-plant employees, while the cane industry consists of 17,000 farmers and 100,000 other employees. These groups would be increased 35 percent by the adoption of a program to give continental growers the right to supply 40 percent of the market. In addition to those directly employed, labor has other groups including railroad, truck, mine, and cotton labor that are beginning to show interest.

We will not expect to receive cooperation from the refiners' group, except those using continental-grown cane. We will meet this group across the table for a fair discussion and solution of the problems presented. Because we will have opposition is no reason why we should allow a policy to continue for the benefit of a few thousand well-paid workers, while several hundred thousand could be benefited by a change of policy.

Recently there have been many indications that labor is studying the sugar policy of the United States and that labor is interested in the benefits that would accrue to it by increasing the number of workers. The growers welcome this interest. We feel sure that labor will continue to study the sugar problem and take an active part in its solution. The opportunity is now presented to the processors and refiners of continental-grown beets and cane to join the other two groups, the growers and labor, which will mean the beginning of a movement that will secure the adoption of a new Sugar Act and provide the means for increasing acreage of cane and beets, an increase in labor employed, and a larger share of the continental market for the products of our growers and labor.

Cost of Construction of Army Cantonment at Fort Belvoir, Va.

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. ENGEL. Mr. Speaker, this is the fifth report on the 13 army cantonments I visited as a member of the Appropriations Committee.

Fort Belvoir is an engineer training camp situated in the State of Virginia some 15 miles south of the city of Washington on the Richmond road. This was a fixed-fee job. The amount estimated for this project under the original appropriation bill was $5,906,878. The War Department weekly field report for March 15, 1941, estimated the total cost for work authorized to that date at $14,290,452. The project was 90 percent complete on March 5. Fort Belvoir was originally a World War camp and contemplated the housing of 20,000 World War troops, but the World War project was never completed.

SITE

The World War tract consisted of 6,800 acres still owned by the Government—1,950 additional acres are to be acquired. Of the 1,950 acres to be acquired, 62 acres will cost $700 an acre. The engineers inform me that this 62 acres is necessary because of its location on the water front and that it is intended to be used for the training of troops in pontoon work. Five hundred and ninety acres of the tract to be acquired will cost about $80 an acre. This part of the site is to be used for demolition purposes. I made some inquiry, and authoritative sources inform me that the value does not exceed $50 an acre. One thousand one hundred and sixty acres is to be used for training area and will cost around $300 per acre. There are approximately 50 or 60 houses on this tract. The land is being acquired through the Washington office of the Quartermaster General.

CAPACITY

Fort Belvoir has for some time been a Regular Army engineering camp. All available World War areas were used, some of the old sites being now occupied by permanent Regular Army buildings. The original plans for this camp called for 643 additional buildings to house 442 officers and 18,027 men. There was practically no increase in the number of troops to be housed or buildings to be erected.

QUALIFICATIONS OF CONTRACTOR

The contractors on this job were Charles H. Tompkins, of Washington, D. C., and Potts & Callahan Construction Co., of Baltimore. The original contract was for $5,906,878. The contract was dated October 14, 1940. The architect was the firm of Slaughter, Saville & Blackburn, of Richmond, Va. Their contract was dated October 10, 1940. The camp construction quartermaster was Lt. Col. C. E. Myers. From the chart furnished me, the camp construction quartermaster, the contractor, and the engineer all appeared to be eminently qualified and experienced to do this work.

LUMBER

Approximately 33,000,000 feet of lumber was used on this project. The contractor purchased 6,824,000 feet at a total cost of $269,418 or an average of $39.48 per thousand. The Washington office purchased 26,534,000 feet at a total cost of $1,048,522 or at an average of $39.52 per thousand. Ninety percent of the lumber was delivered free on board over Army tracks at the camp. No lumber was permitted to leave the reservation once delivered. The cost of hauling the lumber from the railroad to the job with rented trucks was $4.50 per thousand. In view of the short haul from the railhead on the reservation itself to the building location, this seemed to be excessive, despite the fact that the wage rate of common labor was 80 cents per hour. It will be recalled that at Camp Edwards the contractor hauled lumber from a railhead off the reservation to the reservation, a distance of 11 miles, for $1.85 per thousand on a subcontract. Camp Edwards was paying 62½ cents for unskilled labor. It seems to me that there is an excess cost here of at least $2 per thousand or approximately $66,000.

INSPECTION

The lumber was inspected by both the construction quartermaster and the con-

tract-engineer on board railroad cars or while being unloaded from trucks as to quantity. It was checked as to quality by the contract engineer and construction quartermaster before unloaded. Out of 1,380 cars delivered, over 100 were rejected. It was inspected as to moisture content in the same manner, but no electric machine was used for that purpose.

RAILROAD

Eighteen thousand feet of railroad was constructed at a cost of $10,315. The price paid for rails was $42.79 per ton; 90-pound relay rails were used.

EQUIPMENT

The value of the equipment used at the peak on this job was $850,000. The amount paid in rental up to the time the job was 90 percent complete was $204,000. There was a recapture clause in the contract. The rental paid, I was informed, was 35 percent below the Associated General Contractors' schedule.

EQUIPMENT CHECKING

First. Equipment was checked as to fitness before being inspected by both the contractor and the construction quartermaster through their inspectors.

Second. Equipment was checked as to time by the field auditor of the construction quartermaster's office, each piece of equipment being numbered. The contractor's timekeepers also checked the time of the operator. The equipment was not permitted to leave the job except when on duty and then it was checked on and off the reservation. It was also checked at the repair shop to make sure it was not on the rental roll while being repaired.

BUILDING PIERS

Stovepipe forms were used instead of lumber in the construction of piers upon which the buildings were built. It was claimed that this cost 16 cents per foot, whereas lumber would have cost $1 per foot in material and labor. The piers were from 2 to 16 feet, with an average of 6 feet.

LABOR—CLOSED SHOP

This was a closed shop and no one was employed without a permit being issued by the union, and all labor was furnished through the union. The maximum number of 12,600 men on the job was reached about February 20. Of these, approximately 3,800 were carpenters, 3,800 laborers, 400 plumbers, 350 electricians, and the remainder were miscellaneous workers. Of the 3,800 carpenters it was estimated that approximately 10 percent were finished carpenters, 30 percent rough carpenters, and 60 percent had no carpenter training whatever. The contractor states that he could discharge carpenters and laborers without interference from the union, but this did not apply to mechanical trades.

UNION INITIATION FEES

No one was allowed to work without a permit from the union. The following gives a schedule of initiation fees required to join the union as given me at the job:

Carpenters: $50 to join; $75 if card lapses; $100 if card lapses again; $25 down, $5 per week. Out-of-town carpenters belonging to another union, $2.10 a month.

Painters: $150 to join; $50 down, $5 per week.

Truck drivers: $50 to join.

Rodmen: $11.50 to join.

Laborers: $50 to join. They can pay this in small payments.

Electricians: Initiation fee, $300; down payment, $30; balance in 90 days.

Plumbers: Initiation fee, $100.

Steamfitters: Initiation fee, $100.

Sheetmetal workers: Initiation fee, $167.50; down payment, $25; balance, $10 per week.

The above rates were given to the contractor verbally by men on the job.

LABOR—ORGANIZATION OF WORKERS

There was 1 superintendent and 1 assistant superintendent or project manager in the main office. There was 1 outside, or field superintendent, in the field. Under him were 15 area superintendents, each of whom had from 200 to 800 men. Each area superintendent had under him from 5 to 15 carpenter pushers and approximately 10 labor pushers. These labor or carpenter pushers had under them from 20 to 25 men each. The carpenter pushers, it was stated, were actually good carpenters. It was further estimated that 40 percent of the foremen were good.

LABOR

On January 1, 1941, this project was approximately 30 percent complete, the amount paid out for labor to that date being approximately $2,000,000, according to the pay roll chart furnished me. It costs $53,000 in labor for each percent of progress made. On February 28 the project was approximately 90 percent complete. The total pay roll was $6,118,000, showing that it cost $68,000 in labor for every percent of completion. During the period between January 1 and February 28, 51 percent of progress was made at a cost of approximately $4,100,000. This 51 percent of this project cost $80,000 for each percent of progress, whereas on the first 30 percent it only cost $53,000 for each percent of progress. During the period prior to January 1, the highest pay roll reached was $380,000, whereas the highest weekly pay roll reached between the period of January 1 and February 28 was approximately $575,000 per week. During the period from January 15 to February 28, the weekly pay roll exceeded $400,000 per week. There is no way I can account for the difference in progress made during the second half of this project as compared to the first half. At practically every other project that I examined, the progress made on the second half of the job was much faster and for less money than that made on the first half of the job. The larger the pay roll, as a rule, the more it cost per percent of progress made.

WAGE SCALE

The following gives a comparison of the wage scale paid by the Fort Meade project, which lies 15 miles north of Washington, and Fort Belvoir, which lies 15 miles south of Washington:

	Fort Meade	Fort Belvoir
	Per hour	*Per hour*
Carpenters	$1.25	$1.62½
Common labor	.62½	.80
Bricklayers	1.50	1.75
Electricians	1.50	1.80
Painters	1.12½	1.57
Plasterers	1.50	2.00
Plumbers	1.37½	1.65
Roofers	1.25	1.45
Sheet-metal workers	1.37½	1.62½
Steam fitters	1.37½	1.75
Truck drivers	.60	(1)

[1] 50 cents to $1 per hour.

TRAVEL ALLOWANCE

Workers were also allowed 75 cents per day for travel expenses. They could arrive 15 minutes late in the morning and leave 15 minutes early without being subject to discipline or deductions from their pay. This was allowed regardless of where the worker lived.

OVERTIME

Fort Belvoir, Va., lies approximately 15 miles south of Washington, while Camp Meade, Md., lies 15 miles north of Washington. By far the larger portion of the money paid in wages was paid to carpenters and day laborers. The carpenter wage scale at Camp Meade was fixed at $1.25, and at Fort Belvoir at $1.62½ per hour. Common labor was fixed at Fort Belvoir at 80 cents an hour, while at Camp Meade it was 62½ cents an hour. The amount of overtime paid at Fort Belvoir was less than $200,000 on the whole project, while the amount of overtime paid at Camp Meade was $1,808,000. The construction authorities at Camp Meade contended that the reason why this tremendous amount of premium for overtime was paid at Camp Meade was because the only way they could hold their carpenters and laborers was to pay them in premium for overtime an amount equal to the amount of the differential in the wage scale between Camp Meade and Fort Belvoir. What I mean by "premium for overtime" is excess time allowed for which no services were rendered; for instance, if a carpenter worked 48 hours a week and was working on a 40-hour-a-week basis, he was paid for 52 hours' work under a time-and-a-half schedule. He was paid for the 48 hours he worked and 4 hours overtime for which he did not work—in other words, he received a premium for the overtime. That if the wage scale at Fort Belvoir had been the same as Camp Meade, there would have been no necessity of paying this tremendous amount of overtime. It must also be noted that Madam Perkins in fixing this wage scale at Fort Belvoir under the Bacon-Davis Act fixed the wage scale of common labor at 80 cents per hour, while she fixed the wage scale of drivers of trucks of 1½ tons or less at 50 cents an hour. It is a well-known fact that truck drivers always receive higher wages in a community than common labor does. How she can justify this under the Bacon-Davis Act, which provides that she must fix the wages prevailing in the community where the project is located as the wages to be paid on the job, is beyond me. It would be interesting to examine

the original testimony upon which she based the determination that the prevailing wage at Fort Belvoir for truck drivers is 50 cents per hour while that of common labor is 80 cents an hour.

POWER SAWS

Each area had a mill with two table saws where 2-inch material was sawed and fitted before being moved on to a job. One-inch material was cut on the job with power and hand saws.

RATIO OF LABOR TO MATERIAL

The weekly report for the week ending February 28, 1941, shows that up to that date the total accumulated expenditures, plus obligations, on this project were $11,148,446, of which $6,113,288 represented accumulated expenditures, plus obligations for labor. Of the remainder, $5,035,157 represented accumulated expenditures, plus obligations for other than labor. This also includes construction quartermaster's overhead. On this basis the ratio of labor to material and other expenses would be labor 55.8 percent and material 44.2 percent.

UTILITIES

The original Army estimate for utilities was $543,000. The actual cost, according to the contract engineer, will be $2,084,900, itemized as follows:

Grading	$217,000
Roads, graveled, including drainage	241,500
Warehouse roads	9,000
Bituminous roads (we received instructions not to treat any roads after this estimate was made)	136,000
Sewage system	502,500
Water system, including wells, reservoirs, addition to filter plant and water lines	592,500
Electrical system	178,400
Railroads, new and reconditioned	160,000
Coal-storage trestle	42,000
Total	2,084,900

SUMMARY

I. Cost

The original amount estimated for this project was $5,906,878. The actual cost will be $14,290,452, or more than twice the original.

II. Capacity

Despite the fact that this project cost almost twice the original amount allocated to the project, there was no material increase in the capacity of the camp as originally planned. Fort Belvoir is a Regular Army camp. The original plans called for 643 additional buildings to house 442 officers and 18,027 men.

III. Site

The site will consist of 8,750 acres; 6,800 acres was the old World War camp owned by the Government and 1,950 acres will be acquired at a cost ranging from $80 to $700 per acre.

IV. Lumber

Of the 33,000,000 feet of lumber used on this project, the contractor purchased 6,824,000 feet at an average cost of $39.48 per thousand and the Washington office of the Quartermaster General purchased 26,534,000 feet at a cost of $39.52 per thousand. The average cost according to the Quartermaster General for lumber purchased ranged from $31 to $41. It cost $4.50 a thousand to haul lumber from the stock pile to the project, a distance of not to exceed 2 miles. At Camp Edwards the contractor hauled lumber from the railhead, a distance of 11 miles, for $1.85 per thousand.

V. Equipment

The appraised value of the equipment was $850,000 and the amount of rental paid was $204,000. The rate of rent paid was 35 percent below the associated general contractor's schedule. At Camp Meade the Army paid $468,822 for equipment rental which in most instances was from 100 to 200 percent higher than the associated general contractor's schedule.

VI. Labor

(a) This was a closed shop, and permits were required of all workers.

(b) The wage scale was the highest of any encountered on my trip. Fort Belvoir lies 15 miles south of Washington; Camp Meade lies 15 miles north of Washington. Carpenters' wages were fixed by the Secretary of Labor under the Bacon-Davis Act at $1.25 per hour at Camp Meade and $1.62½ per hour at Fort Belvoir. Common labor was set at 62½ cents at Camp Meade and 80 cents per hour at Fort Belvoir. The wage scale of the building trades was set anywhere from 15 to 50 cents per hour higher at Fort Belvoir than at Camp Meade. It is interesting to note that while the Secretary of Labor fixed the lowest wage scale for common labor at Fort Belvoir at 80 cents per hour, she set the wages of a driver of a light truck at 50 cents an hour.

VII. Labor allowance

Workers were allowed 75 cents per day for traveling expenses. They could arrive 15 minutes late in the morning and leave 15 minutes early without being subject to discipline or deductions from their pay. This was allowed regardless of where the worker lived.

VIII. Overtime

Less than $200,000 was paid for premium at Fort Belvoir as against $1,808,000 paid at Fort Meade. Fort Meade contends that this tremendous amount of overtime was necessary to prevent workers from leaving Fort Meade to go to Fort Belvoir.

IX. Utilities

The original Army estimate for utilities was $543,000, the actual cost was $2,084,900, or nearly four times the original estimate.

X. Ratio of labor to material

The ratio of labor to material was—labor 55.8 percent, material 44.2 percent.

XI. Comparison between Fort Belvoir, Va., and Fort Meade, Md.

Fort Belvoir lies 15 miles south of Washington, and Fort Meade lies approximately 15 miles north of the city of Washington. The following comparison is interesting:

	Fort Belvoir, Va.	Fort Meade, Md.
Estimated cost	$5,906,878	$9,053,187.
Actual cost	$14,290,452	$23,117,000.
Cost of lumber per thousand feet.	$39.48 to $39.52	$38.29 to $41.50.
Equipment rental paid.	$204,000	$468,822.
Appraised value of equipment.	$850,000	$1,114,422.
Percentage rental paid above or below A. G. C. schedule.	35 percent below.	100 to 200 percent above.

	Fort Belvoir, Va.	Fort Meade, Md.
Wage scale fixed by Secretary of Labor:	*Per hour*	*Per hour*
Carpenters	$1.62½	$1.25
Common labor	.80	.62½
Truck drivers	(1)	.60
Electricians	1.80	1.50
Bricklayers	1.75	1.50
Painters	1.57	1.12½
Plasterers	2.00	1.50
Overtime	$200,000	$1,808,000
Utilities:		
Original estimate	$543,000	$766,264
Actual cost	$2,084,900	$2,690,550
Ratio of labor to material:		
Labor—percent	55.8	65.5
Material and other expenses—percent	44.2	34.5
Maximum number of men employed	$12,600	$19,900
Carpenters	$3,800	$8,113
Day laborers	$3,800	$8,595

[1] 50 cents to $1.

Bonneville Project: Its Value and Benefits to the People of Southwest Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

STATEMENT OF HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. SMITH of Washington. Mr. Speaker, I take pride in the fact that our national administration has brought numerous benefits and blessings to the communities and people of my congressional district, and that I have been privileged to participate in their actual consummation. The outstanding Federal project in my district is, of course, the Bonneville project, which I originally sponsored and have actively promoted through the years. This already has brought and will continue to bring to the citizens of southwest Washington more benefits and advantages than any project or enterprise, public or private, in our entire history. It will serve coming generations as well.

There has already been expended in the nine counties of my district over $12,000,000, and the expenditure of the further sum of approximately $10,000,000 is being authorized. The creation of new industries and pay rolls, giving employment to thousands of citizens, the employment provided in the construction of the substations and transmission lines, the power furnished to our local utility and rural electrification projects, and the reduced consumer rates which have resulted in vast savings to our people are some of the benefits which have accrued to our citizens from the Bonneville project. These facts are most gratifying to me.

I insert the statement which I made before the Committee on Appropriations on April 17, 1941:

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. JOHNSON of Oklahoma, Mr. MARTIN F. SMITH, from Washington, was in here this morning, and we just did not get to him, so we will now hear him as the next in line.

Mr. SMITH of Washington. Mr. Chairman and gentlemen of the committee, I deeply appreciate the courtesy of the committee in granting me an opportunity to be heard again in support of the Bonneville Dam project in Washington and Oregon.

It appears that I represent what is probably the most public-power-minded district in either Washington or Oregon, as we have adopted in every one of the nine counties in my district P. U. D. projects, and we have five rural electrification projects in my district.

I feel that I would be remiss at this time if I did not extend to the committee, and particularly to those members of your committee who were conferees on the first deficiency appropriation bill, the deep appreciation of our people out there for the action that was taken in striking out from the first deficiency appropriation bill (H. R. 3868) the restrictive language applying to the $1,000,000 originally making available $300,000 for surveys and $700,000 for construction tools, equipment, and stock inventories, and thereby rendering this entire sum of $1,000,000 available instead for construction of the new transmission lines for the new Reynolds Metals Co. plant at Longview, Wash., in my district, so essential to the production of aluminum for the manufacture of airplanes for our national-defense program.

It is expected that construction of this plant will be completed about July 15, powered by 60,000 kilowatts of Bonneville-Grand Coulee electric power, and employing at the beginning about 300 men. The plant is to have an initial capacity of 60,000,000 pounds of pig aluminum per year, which is an increase of the annual capacity of 40,000,000 pounds first planned and now expanded to meet the national-defense needs.

The plant at Longview will give the Reynolds plant an annual capacity of 100,000,000 pounds of aluminum per year, or a third of the entire Nation's 1939 production. In fact, the Longview plant and the Alcoa plant at Vancouver, Wash., also in my district, will result in the Washington Columbia River Basin region in my congressional district having an aluminum-production capacity of nearly 30 percent of America's entire 1941 output.

An average Army or Navy airplane requires 10,000 pounds of aluminum, so the increased expanded capacity of the Reynolds plant will produce sufficient aluminum for 6,000 planes annually—a very substantial and essential contribution to our national-defense program.

Construction also has started on the new plant of the General Chemical Co., at Vancouver, to manufacture in liquid form a sulfite of alumina which is also used in powder form by Pacific Northwest paper mills.

Having had a part in the Bonneville legislative program, I consider it pertinent to inventory the results to date of the Government's long-range Columbia River development program and to chart its effect on the regional growth of the Pacific Northwest.

The Bonneville project received its initial start by the Rivers and Harbors Act of 1925 (Public, 585, 68th Cong., approved March 3, 1925). This act directed the Secretary of War to undertake a preliminary survey and to submit to Congress an estimate of the cost of surveying all navigable streams where power developments appeared to be feasible. Such surveys were proposed to formulate general plans for the multiple-purpose improvement of our outstanding streams—for navigation, flood control, irrigation, and the economic development of power. Growing out of this authorization, the Secretary of War, on April 12, 1926, submitted his report, which was printed as House Document 308, first session, Sixty-ninth Congress. Among the streams covered in the report was the Columbia River and its principal tributaries.

The 1927 Rivers and Harbors Act directed the Secretary of War to make the surveys recommended in House Document 308.

As a result of this latter authorization for surveys, the Secretary of War, in March 1932, submitted a comprehensive report which was printed as House Document 103, Seventy-third Congress. This remarkable report demonstrated that the Columbia and its tributaries could be developed in the greatest system of low-cost hydroelectric power in the United States.

The construction of the first Federal dam on the Columbia River was initiated in accordance with the recommendations of House Document 103 as Public Works Project 28, North Bonneville, Wash., on September 30, 1933. The dam, locks, fishways, and power plant connected with this project were designed and constructed by the Corps of Engineers, United States Army. As a result of a Supreme Court decision, the Bonneville project was formally authorized by Congress in the River and Harbor Act of 1935, Public, 409, Seventy-fourth Congress, approved August 20, 1935.

It was my privilege to have a part in the first authorization and early in 1937 to introduce a bill for the completion of the Bonneville project and the authorization of a transmission and marketing agency. This bill was enacted into law as Public, 329, Seventy-fifth Congress, approved August 20, 1937.

INVENTORY OF ACCOMPLISHMENTS

The marketing policies included in the act of August 20, 1937, are now providing a base for a new and substantial economy for the Pacific Northwest.

The surplus power from Bonneville is now being marketed at the lowest wholesale rate in America—at $17.50 per kilowatt-year, delivered at any point within economic transmission distance of the generating plant.

This low wholesale rate has already caused a general lowering of resale consumer rates on systems using Columbia River power, and following the general increase in domestic and commercial consumption, widespread rate reductions in other systems have been induced.

Since the authorization of the river and harbor bill of 1935, the rate reductions by the private utilities in Washington and Oregon have totaled over $6,800,000 annually. It has been estimated, including all public and private power systems, that the Bonneville development has produced electric rate savings in the States of Washington and Oregon totaling more than $13,000,000 in the period from 1935 to 1940.

DEFENSE APPLICATION OF BONNEVILLE POWER

After the past fiscal year was completed it became apparent that the defense industries would look to Bonneville for electric capacity to meet the growing demands of the national-defense program.

To date five industrial contracts have been executed at Bonneville, totaling 166,500 kilowatts. The largest of these contracts are with the Aluminum Co. of America and the Reynolds Metals Co., which have established large new ingot-production plants at Vancouver and Longview to supply the airplane industry, as I have already stated.

In addition, the Pacific Carbon & Alloys Co. and the Pennsylvania Salt Co., both defense chemical-producing concerns, have executed contracts and have started plant construction.

POWER CONTRACTS

To date the Bonneville Power Administration has 32 executed contracts totaling 218,352 kilowatts, which represents about 47 percent of the ultimate dependable capacity of the Bonneville plant. Power sales contracts have been executed faster than installed plant capacity could be completed. These contracts include 9 executed with public districts totaling 12,152 kilowatts; 10 with municipalities, totaling 6,450 kilowatts; 5 with cooperatives, totaling 1,750 kilowatts; 3 with private utilities totaling 31,500 kilowatts; and 5 with industries, totaling 166,500 kilowatts.

To date the Bonneville Power Administrator has received over 152 power applications, representing an amount nearly double the ultimate capacity of the Bonneville installation. It has been estimated that 84 of these 152 applications will result in a probable demand equal to over 80 percent of the ultimate capacity of the project. It is thus evident that the success of the project from a market standpoint is assured.

The fiscal year 1941 will see a remarkable growth in kilowatt-hour sales and accruing revenues. For this fiscal year it is estimated that the monthly peak will exceed 118,000 kilowatts and the kilowatt-hour sales will approximate 809,000,000 kilowatt-hours, with a resulting revenue of about $1,900,000. From the load in sight it is apparent that the power revenue will increase with the installed plant capacity until it reaches a figure in excess of $8,000,000 annually. Such revenues will provide a full return to the Federal Treasury in a period much shorter than the estimated amortization period of 40 years.

SCHEDULE OF GENERATING CAPACITY

To meet this rapidly growing demand the last session of Congress provided appropriations to insure the completion of all of the generating units of the Bonneville Dam.

At the end of the past fiscal year the Corps of Engineers had installed and were operating the first two units of 43,200 kilowatts each, or a total of 86,400 kilowatts. Two units, 54,000 kilowatts each, were completed in January 1941, and are now ready for service. Two additional units of the same size are scheduled for service in January 1942, and the remaining four units will be ready for service in the period between July 1, 1943, and July 1, 1944.

APPROPRIATIONS AND ALLOTMENTS

The total appropriations and allotments for Bonneville through the Seventy-sixth Congress are as follows: (1) War Department dam, lock, and power plant, $70,368,876, and (2) Bonneville Power Administration for transmission lines and accessories, $37,100,000, making a total of $107,468,876. It has become necessary because of the rapidly expanding market for Columbia River power to carry out the mandates of the act of August 20, 1937, to rapidly advance the construction of the high-voltage grid system connecting Grand Coulee and Bonneville and to provide feeder lines to reach the actual and potential markets. The construction of these lines has been rapidly pushed in order to keep transmission construction abreast of sales.

To date, design work has been performed on 16 substations, of which 4 have been completed, and surveys have been completed for 32 transmission lines totaling 1,750 circuit miles. Seven steel tower lines, with working voltages up to 230,000 volts, were under construction during the fiscal year. At the close of that year 2 of these lines were completed, the third was about 99 percent completed, the fourth 93 percent completed, and 2 had reached the 66-percent stage. The Budget submitted by the President for the fiscal year 1942 included two Bonneville items. These are: (1) Power plant, $7,170,000, and (2) transmission facilities, $12,958,500. The first item will cover construction which will be divided between Oregon and the Third Washington District and cover a new transmission line between north Bonneville and Vancouver, Wash., the north Bonneville substation, the Vancouver substation, and feeder lines serving the new industries in and around Vancouver.

Approximately half of the $70,000,000 War Department appropriation has been or will be spent in providing facilities located within the third Washington district. Out of the $37,000,000 transmission appropriations, $13,245,670 has been or will be spent on facilities within the third district.

TRANSMISSION FACILITIES

The transmission facilities within the third district for which funds were provided up through the fiscal year 1941 are as follows: Bonneville-Vancouver 230-kilovolt transmission lines Nos. 1 and 2, North Bonneville substation, Bonneville-Coulee 230-kilovolt transmission line No. 1, Vancouver-Kelso 230 kilovolt transmission line, Chehalis substation, Vancouver substation, Chehalis-River Crossings, Kelso substation, Chehalis-Raymond transmission line, Raymond substation, Klickitat extension, Aluminum Co. substation, and service lines, the West Coast properties, Centralia equipment, Mossy Rock transmission line, Ilwaco substation, dispatching facilities, Vancouver, and warehouses and shops located at Vancouver.

NEW REGIONAL ECONOMY

There is no region in the United States today that possesses such a large dependable source of cheap electric power as the Columbia River Basin. Such power is becoming the backbone of modern industrial development. With the expansion of industries requiring substantial amounts of low-cost power, industrial and defense attention is now being turned to the Pacific Northwest.

In the past the economy of this region was based entirely upon a depletable lumber industry and upon agriculture. Such types are now being augmented with new electrochemical industries, resulting in the large emergency power demands. Such a demand is supplemental to and in addition to a normal growing market accelerated by the lowering of electric resale prices.

POSSIBLE NEW INDUSTRIES

When this country is facing rearmament, the establishment of new defense industries in virgin territory becomes important not only from the standpoint of defense. Such industries include those which will produce aluminum, magnesium, copper, lead, zinc, chlorates, hydrates, and high-grade alloy steels. Such products are now essential to the aircraft, munitions, ordnance, and shipbuilding defense activities. In the post-defense period they can supply ready western markets. Such industries will locate and expand in the Pacific Northwest because of the importance of cheap power and the availability of native metallurgical materials.

In this connection it is well to note the present location of our national-defense industries. Due to past historical developments, most of such industries are located in the Northeastern States and east of the Mississippi, which represents an area about 13 percent of the country's land area. Previously the 11 Western States, covering 40 percent of the Nation's land area, have not been equipped with industries to provide the defense materials needed by the Pacific coast and our Pacific outputs.

The union of cheap power with these natural metallurgical and chemical resources is bound to change the previous economy. Zinc, mercury, tungsten, molybdenum now move east 2,000 miles for processing and fabrication. A good part of this material processed for defense and commercial use has to be returned 6,000 miles to our defense outposts in Alaska and Hawaii. With cheap power, these cross movements can be eliminated and the metals I have named can be processed in close proximity of the raw-material sources. The pig aluminum now being manufactured in the new Vancouver plant of the Aluminum Co., and which will be manufactured in the new plant of the Reynolds Metals Co., can be rolled into sheets and shapes in western mills to supply the large aircraft plants now producing on the Pacific coast. The foresight of Congress in early providing these electrical facilities has become a lifesaver in the timely availability of large blocks of power for defense production. Aluminum is the basic essential of aircraft production, and the mass aluminum process is not possible without large amounts of low-cost hydro power. It was the lack of aluminum and other essential electrochemical metals which resulted in low French production of planes. Such a situation caused the downfall of France.

The Pacific Northwest is now a vital part of the defense program because of the availability of such a large reservoir of high-class power. Necessity has opened up the region's great resources. The utilization of the cheap, dependable power sources will encourage the establishment of further electrometallurgical and electrochemical industries. These, with large pay rolls, will in turn augment the production capacity of agriculture and existing manufacturing plants. The effects of such developments are already being felt in this great country. All signs point toward a new regional economic order which our people have sought for many years.

FISCAL DATA

I submit the following statements:

Bonneville power administration

SUPPLEMENTAL CONSTRUCTION ESTIMATE

Item	Total	Third Washington district
Bonneville-Coulee line No. 2	$3,785,000	
Bonneville-Vancouver lines Nos. 5 and 6	1,615,000	$1,615,000
Feeder-line connections	4,000,000	2,761,000
Advanced surveys	300,000	150,000
Construction tools and inventories	700,000	350,000
Permanent buildings	250,000	250,000
Operation and maintenance	250,000	250,000
Total	10,900,000	5,376,000
Less, approved in deficiency bill, H. R. 3836	1,000,000	
Net amount before Interior appropriation committee	9,900,000	5,376,000

58⅓ percent of entire estimate will be spent in third Washington district (estimated).

REGULAR SUPPLY BILL

Item	Total	Third Washington district
Grand Coulee-Covington line	$1,730,000	
Bonneville-Vancouver line No. 3	1,219,000	$1,219,000
Substation addition, 230,000 volts	4,022,900	2,457,700
115,000-volt lines	253,000	
Substation additions, 115,000 volts	848,000	151,000
Feeder lines	1,500,000	1,500,000
Advanced surveys	200,000	100,000
Construction, tools, equipment	300,000	200,000
Operation, maintenance, and marketing	885,600	450,000
Coulee lines	2,000,000	
Total estimate	12,958,500	6,077,700

46⅝0 percent of entire estimate will be spent in third Washington district.

Public utilities districts, third Washington district

District	1940 population	Date election held	Assets	Kilowatt-hours generated and purchased
Mason No. 1	1,500	1934	$82,000	1,215,000
Mason No. 3	10,103	1934	141,189	389,200
Cowlitz No. 1	40,155	1936	6,787,408	92,681,083

Grand total	10,533,000	1,503,600

I could go into a great many more details here, but you have already heard other witnesses on Bonneville, particularly Dr. Raver, Administrator of Bonneville, so I am not going to do that; and thank you for your patience in listening to this statement.

Mr. LEAVY. Mr. Smith, in addition to the regular Budget estimates made last fall of $12,000,000 for Bonneville, there has been a supplemental estimate of $10,900,000, a million of which was authorized by the deficiency committee, and $10,900,000 is now before this committee. Has that been made necessary largely by the national-defense program?

Mr. SMITH of Washington. I would say, Judge LEAVY, that it has. It has been found necessary to increase the facilities to serve the Alcoa plant at Vancouver and, of course, the new transmission lines and substations for the plant of the Reynolds Co. at Longview, as well as the other new industrial plants in that area.

Mr. LEAVY. And in addition to the R. J. Reynolds new aluminum plant under construction at Longview, since last year, the Aluminum Corporation of America has built a large plant and has doubled or trebled its capacity?

Mr. SMITH of Washington. They are trebling their capacity originally contemplated, necessitated by the national-defense program.

Mr. LEAVY. And the receipts from power at Grand Coulee and Bonneville are estimated at $6,000,000 for the next fiscal year?

Mr. SMITH of Washington. I so understand.

Mr. LEAVY. And without the construction of these lines and the hasty construction of them the production of these light metals will have to be curtailed and likewise the return on the investment will have to be postponed?

Mr. SMITH of Washington. That is very true, the speed-up of our national-defense production, especially of airplanes, is absolutely dependent thereon; also the amortization of the cost of the project. It is my understanding that the National Defense Council has indicated they would like to have this new Reynolds plant go into production by the 15th of July. And, of course, we will also have to provide the additional units to serve the expanded plant at Vancouver of the Aluminum Corporation of America.

Mr. SHEPPARD. Has the Reynolds investment in buildings, and so forth, reached a state where they can go into business as of July 15?

Mr. SMITH of Washington. They are striving to do so, I will say to the gentleman from California.

Mr. SHEPPARD. What is the approximate condition now?

Mr. SMITH of Washington. They are now proceeding with the construction of the plant as rapidly as possible.

Mr. SHEPPARD. Have you any labor trouble?

Mr. SMITH of Washington. No labor trouble whatever.

Mr. RICH. When do you expect to have that Bonneville project completed?

Mr. SMITH of Washington. I think by December 1943 they will have all of the 10 units completed.

Mr. RICH. How much money is going to be needed besides what has already been appropriated? You can substitute that figure in the record if you wish.

Mr. SMITH of Washington. I can furnish that, if you would like me to furnish it for the record.

The information referred to is as follows:

"In addition to the regular Budget estimate of $12,000,000 and the supplemental estimate of $10,900,000, totaling $22,900,000, in support of which I have testified, it is estimated that probably another $10,000,000 will be required to complete the Bonneville project. The exact amount will depend of course, upon the location of the new industries to be served, how close or how far away they are from the dam—the distance the power load has to be carried and transmitted. The figure of $10,000,000 is only a rough estimate and is subject to variation, according to the engineers, but that is as nearly as can be approximated at this time. However, in view of the fact that this is a self-liquidating project, whatever the amount which the Government is called upon to invest it will be returned to the Treasury."

Mr. LEAVY. Mr. Smith, of course the committee knows my interest in these matters, but you are far more familiar with matters involving your own district and involving Bonneville, and I am sure we are all appreciative of the splendid statement you have made in support of these Budget estimates.

Mr. SMITH of Washington. I thank my distinguished colleague from my own State, whose services have been so valuable on this committee and in other respects to the people of the entire State of Washington, including my own district. I thank you, Mr. Chairman, and gentlemen of the committee, for your courtesy.

Transportation and Defense Taxes

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. D'ALESANDRO. Mr. Speaker, the American today has four media from which to choose in pursuing his travels. The airplane, the train, the steamboat, and the automobile are available to convey him to any point that he may wish to reach within the Nation's confines. It is due in no small way to the wise policy of public development and encouragement that this great transportation system—the finest and most comprehensive in the world—is available for his use. For the American people long have expressed their interest in all four media and at various times have promoted the development of one or another. They appreciate the place of each in the Nation's economic order, the way that one form supplements another, and they realize, too, that absence or discouragement of any one, regardless of the possible adequacy of the other three, would result in a transportation system which would be quite incomplete.

It is for this reason that in considering an economic sanction upon one form, whether it be regulation, subsidy, or taxation, proper deliberation should be given to the dynamic equilibrium that prevails among the various components of the Nation's transport network. For to favor or penalize one media without regard for the others would not only be discriminatory but contrary to the public interest which has been manifested actively since the formation of the union. In matters of taxation, especially, it is imperative that proper consideration be given to the relationship of a levy on a single form of transportation to operating economy and to the effect upon the dynamics of transport.

TAXES ON HIGHWAY TRANSPORTATION

Consider highway transportation, for illustration. It is beyond dispute that private and commercial motor vehicle owners now are paying far more than

their equitable share of the cost of highways in the form of State gasoline taxes, registration fees, and other special levies. In my own State of Maryland motorists pay annually over $18,000,000 in special motor vehicle levies. They also pay all the general taxes paid by other citizens for the upkeep of government—local, State, and Federal—through the normal channels of taxation, that is, assessments on property, income, business, various commodities and the like. And, in addition, each highway user today is paying an average of $15 annually toward the cost of national defense through the Federal tax of 1½ cents on gasoline and the various Federal levies on automotive equipment.

These payments, which are over and above the road use levies imposed by the States and the normal taxes for all branches of government, are now providing some $450,000,000 annually toward the development of adequate armed forces. Of the four existing media, highway transportation is the only form which has been called upon thus far to bear a particular portion of this defense-tax burden.

A brief analysis of the operating costs of motor vehicles illustrates the effect of these levies upon their operations. The "out of pocket" costs involved in operating a truck, which include driver's wages, gasoline, lubricating oil, tires, and repairs, average about 10 cents per mile. Approximately 15 percent of this is expended upon mileage taxes, that is, levies on gasoline, lube oil, and tires which vary directly with the number of miles operated. This does not include registration fees, special permit levies, nor other imposts which truck operators charge to fixed costs, along with garage, insurance, and so forth.

The existing defense taxes alone represent about 5 percent of these operating charges. Anyone familiar with the keenness of the competition which prevails among carriers today, will appreciate the material advantage which this margin affords to the competitors of highway transportation.

If all motor vehicles are considered, the effect of these levies becomes even more significant. The mileage costs of the composite motor vehicle averages around $150 per year, more than $40 of which goes for operating taxes. National-defense taxes, paid to the Federal Government, alone amount to about $15, or 10 percent of the total operating expenses. In order to effect equality of taxation throughout the entire transportation system, it would be necessary either to eliminate the existing defense levies or place corresponding taxes upon the operations of other transport media.

MOTOR-VEHICLE TAXES AND HIGHWAY COSTS

It is claimed sometimes that motor-vehicle taxes are offset by highway expenses incurred by various units of government, and that highway users are enjoying a public subsidy. As previously mentioned, the defense taxes under discussion herein are in addition to the special road levies which highway users contribute for the development of road facilities. Inasmuch as these taxes are for development of an adequate Army and Navy, any consideration of road costs and their relation to motor-vehicle taxes is extraneous. It is worthy of mention, however, in this connection that Chairman Joseph B. Eastman, of the Interstate Commerce Commission, in his comprehensive four-volume study of public aids to transportation, found that highway users pay more than their equitable share of costs, while rail, water, and air transport are enjoying sizable public subsidies. The scale of overpayment by various classes of highway users is shown in the accompanying table.

THE DECLARED POLICY OF THE CONGRESS

The welfare of the Nation's transportation system today depends upon equality of treatment toward all forms of transport and the maintenance of equal opportunity among them. A national policy embracing this attitude was declared by Congress only a year ago in the Transportation Act of 1940.

It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation * * * so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices.

Considering this policy, does it seem proper that highway transportation should pay, as it now is paying, a defense tax amounting to 10 percent of motor-vehicle running expenses, while other transport media go scot-free? Does it seem fair to impose an additional tax upon the only fuel they can use while the fuel used by competitive media escapes without special defense levies being imposed upon it?

HIGHWAY TRANSPORTATION INDISPENSABLE TO NATIONAL DEFENSE

Approximately one-quarter of all the gasoline is consumed in motor trucking, which certainly is indispensable to the defense program. The superior economies of such transportation unquestionably are playing an ever more important role in the current defense effort, so that any increased tax upon the gasoline consumed for this purpose merely would increase the cost of transportation of materials essential to defense and hence seriously handicap such effort. Even in normal times, studies by the Federal Public Roads Administration indicate, approximately two-thirds of the operation of private automobiles owned by farmers is for business purposes. This group of the population incidentally accounts for approximately 30 percent of all the passenger cars. Obviously the farmer will play an indispensable role in the provision of adequate foodstuffs in any defense effort. But he would be penalized heavily through increased Federal taxation of the gasoline which he consumes.

Even in the case of residents of urban areas, these same studies show, in normal times slightly more than half of the operation of passenger cars represents business pursuits. There is compelling evidence, furthermore, that this percentage is increasing rapidly as a result of defense needs. One of the chief obstacles to satisfactory progress of the defense effort, it is known quite generally, has been the serious shortage of adequate housing facilities in the vicinity of industrial areas upon which there is the greatest dependence for fulfillment of the defense program. The fact is that the housing shortage for defense workers is so serious that the magazine Look devotes the major article in its current issue to this problem. The Federal Government recently purchased two Hudson River excursion boats and converted them into floating barracks for defense workers in the South. It also bought a large number of automobile trailers to accommodate workers on defense projects, the trailers to be moved from job to job as occasion demands. Defense workers obviously want to live as close to the job as possible. When they have to travel long distances to work a tax on their automobile use is equivalent to a tax upon their inability to secure housing within a reasonable distance from this work.

Many specific instances of this situation might be cited. In Baltimore City, for example, approximately 85 percent of the workers employed at Sparrows Point, a steel center, drive to work in their own cars or ride with fellow workers. Likewise, with the immense growth of the Glenn L. Martin aircraft center, it is estimated that over 80 percent of the workers must necessarily use motor vehicles. Upon investigation, I find that the same conditions prevail in Youngstown, Ohio, a steel center; Midland, Mich., a chemical center; and Glendale, Calif., an aircraft center.

Of the 3,442 municipalities in this country with a population in excess of 2,500, it has been found that 2,130, or approximately two-thirds of the total, possess no system of mass transportation whatever. Their residents are required, therefore, to rely for transportation solely upon their own private automobiles.

It seems quite clear that higher taxes upon the gasoline consumed in such traveling would cause a serious disruption in the existing transportation facilities upon which defense workers must depend in moving to and from their work. In fact, it is not too difficult to envisage how such added costs would contribute to the current requests for higher wages to offset the effect of the increased tax. Such taxation, therefore, probably would tend to nullify directly much of the effort which is being expended currently in attempting to stimulate progress of the defense program.

ADDITIONAL DEFENSE TAXES

The additional levy on gasoline now being considered by the Congress would widen the tax differential between highway and other transport agencies. Such a levy would have a most adverse effect upon highway transport, therefore, and only could be detrimental to the

welfare of the transportation system as a whole.

If equality of treatment is to be maintained, it would seem necessary to place similar levies on other transport so as to produce approximately equivalent revenue from those sources before any further increase in highway levies is considered.

Not only would this accomplish the desired aim of the Congress to produce a tax yield commensurate with the cost of national defense, but it would be in accordance with the declared congressional policy of fair and impartial treatment to all transport agencies.

Comparison of costs per vehicle, by vehicle groups, as finally derived with payments made, 1932

Class of motor vehicles and rate capacity	Cost per vehicle	Payments per vehicle	Payments minus assignable costs

Federal Gasoline Tax

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. CRAVENS. Mr. Speaker, the current proposal to increase the Federal tax on gasoline holds many potential dangers, the results of which should be examined carefully before additional burdens are placed upon a commodity already heavily exploited for revenue. The danger to States is unusually imminent. Arkansas, and many other States, have constructed a system of highways, the costs of which are to be paid from revenues derived from a gasoline tax. These States have heavily bonded themselves for highway construction and the revenue realized from gasoline tax levies have been pledged to pay the bonds so issued and the interest on the same. For example, the State of Arkansas recently refunded its highway debt in the sum of $136,000,000 and pledged the first $10,000,000 of its highway revenue annually to discharge the obligation. Consequently, if Arkansas is to maintain its highway system and to have funds for any new construction it must raise in excess of $10,000,000 annually. From a practical taxing standpoint, nearly all of the revenues must necessarily be obtained from a tax on gasoline. Consequently, Arkansas imposes upon its own citizens a tax of 6½ cents per gallon on motor fuel to which must be added the present Federal tax of 1½ cents, making a total of 8 cents that must be paid in taxes on each gallon of gasoline consumed or substantially a sum equal to 50 percent of the value of the gasoline itself.

The present proposal to add another 1-cent tax by the Federal Government, although small in itself, would, when added to the present burden, necessarily result in a substantially decreased use of gasoline with a consequent reduction in the amount of total revenue actually received. It is generally recognized that a tax increase beyond a certain point lessens rather than enlarges revenue, and it is that situation which will face Arkansas and other States similarly situated, if the present gasoline tax is further increased. Our present highway system cannot be maintained; no new construction can be undertaken, and our bonds may be forced into default, all because of an insistence that an already overtaxed commodity be further and unreasonably taxed.

The highways of Arkansas and the other States are a necessary and integral part of the groundwork of the national-defense system. Over these highways are transported not only soldiers and military supplies and equipment, but the vast mass of commodities and materials behind the national-defense program. Without such highways the national-defense effort would either bog down or be materially curtailed and delayed. It is, moreover, calculated that with the diversion of coastal, water-borne shipping facilities to transoceanic routes, the burden of land hauls by both railways and trucks will materially increase.

It is, therefore, to the best interests of the United States that the individual States be left in a position where they may maintain and improve their highways to carry the burden imposed upon them. This they certainly cannot do if the necessary revenues for that purpose are to be diminished by imposing confiscatory taxes upon the only commodity upon which the States must rely for funds to carry their share of the burdens.

It is a mistaken idea, advanced by some, that gasoline is a luxury and taxable as such. As a matter of fact, over two-thirds of the gasoline consumed in this country is used in vehicles operated in whole or in large part in the prosecution of essential business enterprises. Most of these businesses operate on a small margin of profit and must continue to do so if the effort to hold down commodity prices is to be successful. The latter objective must, however, necessarily fail if the very businesses who are asked to hold down costs have their basic operating expenses increased by further taxes upon that which they must use in order to carry on.

All realize the existing necessity of raising revenue to finance the defense of this country. Sacrifices must and will be made. It is felt, however, that there are many commodities, now practically immune from taxation, which could be taxed, rather than increase the rate on an essential article which is already bearing a disproportionately high share of the tax burden, especially where the increase of the latter has so many features of danger both to the country and the individual States, and might serve to defeat the very purpose sought to be gained.

Still Another New Deal Chicken Comes Home To Roost

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. MURRAY. Mr. Speaker, the following article in the May 11 Washington Sunday Star clearly indicates that huge Federal expenditures in the interests of cotton have not met the fantastic hopes of the New Deal:

[From the Washington Sunday Star of May 11, 1941]

CROP-CONTROL PLAN IS BLAMED FOR LOSS OF COTTON MARKETS—FRANK AGRICULTURE REPORT DECLARES PROGRAM HAS OPERATED TO DISADVANTAGE OF UNITED STATES GROWERS AND AIDED FOREIGN COMPETITORS

(By Ovid A. Martin, the Star's special news service)

A startlingly frank report issued by the Agriculture Department's Economics Bureau declares that Government crop-control programs have operated to the disadvantage of American growers and to the advantage of foreign growers of cotton in world markets.

The report is regarded with particular significance because it was made public at a time when exports of American cotton, which once proudly dominated the world fiber markets, have slumped to the lowest point since pre-Civil War days.

This loss of foreign sales was reflected, in turn, by the accumulation of huge stocks of unsold cotton in crowded southern warehouses.

Foreign-trade authorities expect no more than 1,000,000 bales of American cotton to move abroad this season. This volume compares with about 6,400,000 bales exported last season and a record of 10,900,000 bales in 1926.

The Economics Bureau report said the control programs operated by another Agricul-

ture Department agency—the Agricultural Adjustment Administration—had helped bring about a shift in consumption from American to foreign cotton by holding prices of the American product above its normal relationship with cotton produced in other countries.

MARKET OUTLETS REDUCED

"These developments (loss of American export markets and increased consumption of foreign cotton) emphasize the fact," says the report, "that, in the absence of monopoly control of the world supplies of cotton, restrictions on production in the United States and price maintenance for American cotton, without similar restrictions and controls for other cottons, tend to reduce the market outlets for American cotton at the expense of the American cotton industry and to the advantage of cotton producers in other countries and of producers of other fibers that compete with cotton."

The report added that the possibilities of expanding cotton production in other countries had perhaps been underestimated. It declared that developments had greatly weakened, if not destroyed, any basis for confidence that expansion of production outside the United States offered no serious threat to the American cotton industry.

"The importance of the availability of American cotton at competitive prices in maintaining foreign outlets for American cotton is emphasized by data on exports," the report said.

It declared that during the first 6 years of the A. A. A. crop-adjustment programs (1933–38), exports of American cotton averaged 30 percent less than for the 10 years of 1923–32, whereas, for the same period, exports of cotton of competitive countries increased 30 percent.

EXPORT SALES "UNPROFITABLE"

Always ready to defend their programs, A. A. A. officials take issue with what they describe as the implications of the economic report. They agree that perhaps the crop programs have impaired the competitive position of American cotton in foreign markets. But they contend prices prevailing in world markets during the last 10 years were "unprofitable."

"There is no point," one A. A. A. official declared, "in selling cotton, or any other product, at prices which would bankrupt the producer."

The A. A. A. goes on the theory that it is better for the cotton producer as well as for the country to sell a smaller amount of cotton at fair prices than to sell a large quantity at below-cost prices. The net return to the farmer under this theory, the agency holds, is larger because his production costs on the reduced volume are smaller.

The A. A. A. officials contend the economic report overlooked several important by-products of the cotton program. They claim the program, by requiring farmers to observe soil-conserving and soil-building practices, has added millions of dollars to the productive value of southern farms.

Officials also claim that the program has encouraged and helped cotton farmers, particularly those in low-income classes, to produce more food and feed crops for their own use. The A. A. A. program recognized, they say, that cotton farmers had for too long a time depended upon a single cash crop for an income for virtually all their needs, including food.

Apparently anticipating the A. A. A. argument about the "unprofitability" of supplying world markets at low prices, the economics report said the extent to which American producers could afford to expand production and sell at reduced prices in order to compete more effectively with foreign producers depended largely on the alternatives available to American cotton producers.

LITTLE OFFSETTING ADVANTAGES

The report said studies indicated that returns from cotton usually were substantially greater than from alternative crop-and-livestock enterprises in the Cotton Belt. It also said industry apparently was not able to absorb the unemployed in the South at a living wage. Consequently, it concluded, attractive alternatives to cotton production were very limited.

"Under such situation," the report asserted, "the maintenance of prices for American cotton above their normal relationships to those of other growths permits cotton producers in other countries to take over a large proportion of the foreign market for American cotton with relatively little offsetting advantages to American cotton producers in the form of substantial improvements in the general level of cotton prices."

The report conceded that the effects of lost foreign markets might be offset temporarily, in whole or in part, by Government benefit payments to producers cooperating with crop programs. It cautioned, however, that some consideration might well be given to the situation in the event Government payments were greatly reduced or discontinued.

There is only one bright spot for the cotton producer, and that is the domestic market. Under the stimulus of the defense program, domestic consumption is running far above any level of the past.

Also contributing to this high level of consumption have been the Agriculture Department's surplus disposal programs under which cotton has been distributed among needy families in the South for cotton mattresses.

SURPLUS REMAINS PROBLEM

However, the surplus of old-crop American cotton when the new crop starts moving to market this summer is expected to be near the record level of 14,000,000 bales. This would be more than enough to supply domestic and foreign needs for a year. About 11,000,000 bales of this surplus either belongs to the Government, as a consequence of its grower-loan operations, or is stored as collateral for outstanding loans.

Just what the Government will do with this surplus is a problem that apparently must await future developments. Indications are that the surplus will be even larger next year. Steps are being taken to increase grower-loan rates on cotton. Such action would increase the disparity between American and foreign cotton prices in world markets and could be expected to result in even smaller exports.

It is possible that the A. A. A. may ask growers to make further reductions in cotton production pending conclusion of the war.

Some farm officials believe that, should the democracies win, the United States would be in a position to bring about an international cotton agreement under which exporting nations would divide up the world market so as to assure each an "equitable" share at reasonable prices.

America's huge surplus, these officials say, would be an important weapon in behalf of such an agreement.

Mr. Speaker, I might add that over a billion dollars have been taken from the United States Treasury for this one crop, cotton, which crop does not represent one-tenth of the national farm income. There was nearly twice as much cotton exported in 1940 as there was in 1939, and more in 1940 than in 1937 and 1938. The New Deal cannot expect too much sympathy on the grounds that the plight of cotton was a result of the loss of cotton exports due to the war.

Here is a crop which in one year, 1940, has had a $125,000,000 soil subsidy, a $96,000,000 parity subsidy, a $12,000,000 storage subsidy, a $40,000,000 export bounty, and thousands of dollars for investigation of new uses of the crop, and, after all these subsidies, is now in a most embarrassing position. The annual subsidies amount to over one-half the value of the crop.

Add to this complex situation the new sums which are to be extracted from the Federal Treasury if present legislation is passed. The most important is the amendment to increase Federal loans on this crop, without any foreign protection. The South makes believe it is against tariffs. It may be—for the foreigner. The present legislation lifts the American price of cotton by its boot straps—from 9 to 14 cents per pound—and if the world price is 7 cents per pound, it will take at least a 50-percent tariff to protect the American cotton grower, or, as a matter of fact, the United States Treasury. This administration has already put a 3-cent-per-pound penalty, or domestic tariff, on the American producer. This would be a 33⅓-percent tariff on 9-cent-per-pound cotton. The foreign farmer is not even required to meet this tariff.

When the people realize that, according to the latest figures available, 42 percent of the farmers of this country received $60 or less per year in subsidies; 79 percent of them, or about 4 out of 5 farmers, received $100 or less; and 93 percent of the farmers received less than $200, they will demand a reconsideration of the cross-purpose schemes of the New Deal.

Why continue the $10,000 checks to big corporation farmers that cause the surpluses? With mounting taxes, the public will insist on more horse sense and fewer frankfurter hot dogs in mapping out a common-sense, fair, and just farm program.

The United States Treasury cannot be continually used as an artificial means of maintaining the landed aristocracy of the South.

Location of Proposed Veterans' Hospital in the Philadelphia Area

---

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

STATEMENT BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, BEFORE A SUBCOMMITTEE OF THE FEDERAL BOARD OF HOSPITALIZATION, WASHINGTON, D. C., JANUARY 16, 1941

Mr. MYERS of Pennsylvania. Mr. Speaker, under the unanimous consent

granted me to extend my remarks, I am placing in the RECORD my statement and testimony before the Federal Hospitalization Board regarding the location of the proposed veterans' hospital for Pennsylvania, which I urged should be in the Philadelphia area.

Congressman MYERS. General Hines and members of this subcommittee, first let me say I was in the very beginning at quite a loss to understand just why this hospitalization board had determined upon central Pennsylvania, and I have not yet been able to secure any figures or information which would prove it was to the best interest of the veterans themselves that this hospital be located in central Pennsylvania, and, when I say to the best interest of the veterans, I mean to the great majority of veterans.

I understand the state department of the American Legion has on three occasions at State conventions passed resolutions setting forth it was their desire that this hospital be located in eastern Pennsylvania, accessible to northeastern Pennsylvania. I certainly think that the members of the American Legion of our State have no selfish interest as to where the hospital should be located. Their whole interest is based on where it will best serve the great majority of the veterans, and I certainly do think that serious and careful consideration should be given to the action which has been taken by the American Legion members in our State on three separate occasions.

I further believe that this board should be guided by one rule particularly, namely, density of veteran population, and I am sure that all figures and all data and all available information certainly have proven to the veterans of Pennsylvania, to the Veterans' Administration here in Washington, and to the hospitalization board that eastern Pennsylvania is where the veteran population is densest.

Let me say, therefore, that I think we Members of Congress are somewhat at a loss when we are not informed and do not know why central Pennsylvania was determined on by this board. I do know in letters from the Veterans' Administration it was said veterans could best be served by locating a hospital there. I have not been able to get any information that would show to me, or prove to me, that the veterans could best be served by going to central Pennsylvania.

I understand further that even the Harrisburg area, from Harrisburg east, is looked upon by the Veterans' Administration as eastern Pennsylvania. The American Legion and other organizations look upon eastern Pennsylvania as that section of the State located east of a line drawn through the State at a point not quite as far west as Lancaster. And when we say eastern Pennsylvania, we mean a location somewhere in the vicinity of Philadelphia, not in the city, but somewhere near which is fairly accessible to northeast Pennsylvania.

I understood you to say, General Hines, that the veterans in the eastern section of the State had been provided for by a naval hospital and that that was taken into consideration by this board in determining a location.

However, as you yourself have just said, that was before the emergency program, and we know this country is now committed to a two-ocean navy and the personnel of the Navy will be doubled. This policy is not merely for an emergency of today or tomorrow; this country is committed to a two-ocean navy from henceforth, and therefore unquestionably there is going to be a greater demand by the Navy Department for beds in the naval hospital in Philadelphia. Even today more Navy men are being served in that hospital than a year ago. We should give that consideration and realize, regardless of what anyone in the Navy Department may say, that with the facts as we see them and have them staring us in the face it is only natural that the Navy will use more and more beds in that hospital. And so I say to you, General, with that situation before us we can't assume it is possible for you to assure us that you will always have 450 or 500 beds down there.

If an epidemic should take place, or if there is another influenza outbreak in the State, the Navy Department will want that hospital for its own men, as they really should, for we know that the money which was contributed came from the pockets of the men, and nobody can assure us that we will continue to have that number of beds in the Philadelphia Naval Hospital.

I am not committed to Philadelphia or a site immediately adjacent to Philadelphia, but I am unalterably opposed to locating this facility in central Pennsylvania. I do not feel I need to submit figures. Some have been submitted, and I know some of the members of the American Legion who are present will submit to you hosts of figures to prove the point I am making. I reiterate that it is from the eastern section of the State and the northeastern section of the State where practically all or an overwhelming majority of the veterans will come. If we make them go to central Pennsylvania, where so few of the veterans live, to receive hospitalization, we are not doing the right thing for the veterans. I do not hesitate to say that I believe the location of this hospital out in the central part of the State might be looked on as a waste of public funds, and I do believe that this board should give consideration to this and consider the question de novo and disregard what action has been taken by the board originally and give further consideration to the national-defense program.

The other matters that have been mentioned, transportation and medical centers, I will not go into; but coming from Philadelphia and considering that 92,000 veterans, or one-fourth of the veterans that our State gave to the World War, came from my city, from the city alone, I feel that that locality is where this hospital should be located. Thank you.

* * * * *

General HINES. Would you mind telling the subcommittee, in your judgment, where is the line that separates central Pennsylvania from eastern Pennsylvania?

Congressman MYERS. Well, General, first, let me ask, Where is the line as considered by the Veterans' Administration?

General HINES. The Veterans' Administration has not drawn any line. We usually take a patient from one point and send him to the hospital the shortest distance from where he is. We have certain areas assigned to certain hospitals, and generally an area within 150 miles is considered a reasonable distance. But throughout this whole consideration I know the full Board, and there is no secrecy about it that the Board considered central Pennsylvania as the place for the facility, but what they had to consider is known as a domiciliary facility—a home with a large number of domiciliary beds and a hospital to handle those beds and to take care of excess cases immediately adjacent thereto. Then, too, they considered that the Veterans' Administration had a hospital at Pittsburgh, in the western section of the State, and that they had an inherent right in the naval hospital, and they were assured the beds there would be always available. Now, I know that when this subcommittee reports to the Board—and, as I have indicated, the Board did not tie their hands in any way; it told them to consider all elements of this problem and present their recommendations to the Board. The subcommittee has to reopen this entire matter and listen to any argument on any location. But I know when it comes before the full Board they are going to ask that very question because the term "eastern Pennsylvania" is being used, and the Board would like to know what the Members of Congress and the veterans consider the eastern section of the State.

Congressman MYERS. In my humble opinion, eastern Pennsylvania certainly should be considered as that section east of a line drawn through the State at a point not quite as far west as Lancaster. I do believe the hospital should be located closer to the metropolitan area, and because you are going to erect a domiciliary facility is no reason why it cannot be closer to the city. I do not believe we should go out in the country, 75 or 100 miles from the city, which appears to be your purpose, for I am confident we can certainly find sites somewhere in the eastern section of the State even for a domiciliary facility; and let me add—I understand this, General—in the city of Boston you have both a naval hospital and a veterans' facility.

General HINES. We use the naval hospital there, and the Board has under consideration now the location of a new general hospital in that area—in the vicinity of Boston. That has not been definitely determined because a subcommittee is working on that at this time. Thank you, Congressman MYERS.

Civilian Defense, Protective Construction

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. SCOTT. Mr. Speaker, the Office for Emergency Management, Executive Office of the President, has placed on my desk today a booklet entitled, "Civilian Defense, Protective Construction." I note that it has been prepared by the War Department "with the assistance and advice of other Federal agencies."

It may be no more than a coincidence that this booklet appears during the week within which the President was to have made his convoy speech. The timing is perhaps unfortunate and a little premature in view of the President's sudden decision to postpone the speech until May 27, presumably in order to "ready up" public opinion for the forthcoming surprises which, it is broadly hinted, the administration is preparing for us.

This engaging little 36-page booklet, complete with scary diagrams, offers to the public the very latest information regarding the construction of air-raid shelters, the type of demolition, gas, incendiary, and other bombs which we may expect to receive from aerial attack, the effects of these bombs and protective measures which should be adopted to minimize damage. For example, we learn that subways in the United States would probably not provide adequate protection. Our city dwellers will be glad to note, however:

It has been pointed out that steel or concrete framed buildings are relatively safe

from anything but a direct hit from a high-explosive bomb, and the convenience and relative economy of a shelter inside a building may be determining factors in selecting the location of a refuge. Shelters within buildings have the advantage that they are easily accessible to occupants of the building and can be kept warm and livable. With a few exceptions, modern office, factory, and apartment buildings of more than four stories are usually of reinforced concrete or steel frame construction and offer suitable and very accessible locations for shelters within the building.

Mr. Speaker, I do not mean to minimize the excellent work of the War Department in preparing, in all its dreadful detail, this valuable handbook. I am also fully aware that the introduction to the booklet advises us that its mere issuance does not require us to start work immediately on the protective structures described. Nevertheless, it would be interesting to know why this booklet appears at this particular time, why it is being given very wide circulation, and whether our Government is contemplating the taking of such further belligerent steps as to render this booklet indispensable in every American home and office within the near future. If it is not expected that the information will be useful, then the Office for Emergency Management may well concern itself with other duties. If it is expected that all of us should know exactly what to do when the bombs start falling, then we are entitled to a frank statement from our Government as to what has been done and is being done which makes the dissemination of this information of such immediate importance.

Ex-President Hoover's Speech Should Have Sobered Our Minds

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington (D. C.) Times-Herald for today:

[From the Washington Times-Herald]

IN THE NEWS—EX-PRESIDENT HOOVER'S SPEECH SHOULD HAVE SOBERED OUR MINDS

Ex-President Hoover's speech was a fine American utterance and did much to restore his prestige and position as a leader of American opinion.

Let us hope that it also did much to bring sober and unprejudiced thought to the American people.

On American Week at any rate we ought to be able to bring careful consideration to the best interests of our own America, and decide calmly and dispassionately whether or not it is for the present or future advantage of this country to project our people into this foreign conflict.

Mr. Hoover, according to the dispatches, stated that although our relations with the Axis Powers are strained, we are still not in the war.

But, he declared, we would be in the war the moment our Navy goes into action.

"And," continued the ex-President, "it is now proposed that we should put the American Navy into action.

"That," said Mr. Hoover, "is a straightforward, understandable proposal, which boldly makes clear the meaning of words like convoys and patrols.

"That is joining in this war once and for all.

"From here the steps are automatic.

"Our Navy must attack German submarines, ships, and planes if it is to be of any use.

"To make it effective then, we must expand naval and air bases abroad.

"We must equip these bases with expeditionary forces.

"And that is war for long years to come."

That the war will be prolonged for "years to come" is evidenced not only by ex-President Hoover's temperate statement but by the inadvertent words regarding our war activities uttered by Winston Churchill and Lloyd George in the recent vote-of-confidence debate in the British House of Commons.

Said Mr. Churchill, the Prime Minister, in discussing England's war chances for 1941 and 1942 and 1943:

"It may be that 1943, if we have to endure it as a year of war, will present easier problems.

"The United States patrol announced by President Roosevelt [not merely proposed, mind you, but announced by President Roosevelt] and on which the American Navy and air force are already engaged, takes a considerable part of the Atlantic in a certain degree off our hands, but we need a good deal more help.

"I expect we shall get a good deal more help.

"In fact, it has been declared we are to have all help necessary."

So we see from Mr. Churchill's speech that the war we are entering into so heedlessly is expected to endure, as Mr. Hoover says, "for long years to come," in spite of our entry, and, indeed, because of our entry.

Without our encouragement to war and without the commitments of our President—secretly entered into and undisclosed to the American people—the war would be over now, would have been over long ago.

And England would have accepted the terms of the Axis, guaranteeing the integrity of the British Empire and merely demanding that England keep her intrusive fingers out of Europe; that England allow European nations to form their own treaties and unions; and that England do not set one European nation against another and destroy both in order to maintain her own hegemony on the Continent.

It is clear from Mr. Churchill's remarks not only that our country has been committed by our autocratic President to war and that the United States Navy and air force are "already engaged" in "the patrol announced by President Roosevelt" but also that the war, in spite of the contribution by the United States of "all help necessary," is expected to last for years.

How much longer the war will endure than 1943 we do not know, but how formidable it will be we do know if we will only take a calm and factual view of the situation.

It is perfectly clear that we will have opposed to us not only Italy and Germany and Japan but also Russia, and also Hungary and Rumania and Bulgaria, allies of Germany, and probably soon Turkey, now almost a dependency of Russia and Germany, and even possibly France.

Says Lloyd George in the Commons debate:

"Why should Foreign Secretary Eden withhold a fact that is perfectly well known, that Turkey allowed German ships to pass through the Bosporus into the Dardanelles to seize those islands?" (Samothrace and Lemnos).

"The most serious aspect of Eden's speech is that in moving a vote of confidence in the Government he withheld essential facts from us.

"A road which is founded on the quicksands of illusion never yet led to victory."

"In the last war," continues Lloyd George, "America put her fleet in the Atlantic—every boat—while Japan was guaranteeing the Pacific

"What is Japan guaranteeing now?

"She is guaranteeing that she will take advantage at the first opportunity to wrest dominancy of the Pacific from America."

Most surely so.

And what is Russia, who was on the side of America and the Allies in the last war, guaranteeing in this war?

Only the bitter hostility of a powerful people, backed by the largest army in the world.

And what is France, which was the leader of the Allies in the last war, guaranteeing to America and England in this war?

What might happen to us if we do not get into this war is purely hypothetical hooey.

But what we will encounter if we do get into it is plain to everyone who is willing to consider dispassionately the cold, hard, and self-evident facts.

We will have almost the whole of Europe and almost the whole of Asia to deal with.

And while they will never be able to conquer us, will we be able for long years to come to conquer them?

So the war will endure until the world is exhausted and civilization is all but destroyed.

In the course of such a devastating and long-lasting war, our own country will become militarized, democracy will necessarily be submerged, the most iron-bound autocracy will take its place, and we will emerge eventually from the conflict not only destitute of material benefits but devoid of our liberties.

Said Lloyd George further in the Commons debate:

"I have had experience with American war organization.

"It is full of disappointments. You must remember the United States has never had Europe's experience of preparing for war with millions.

"They have very efficient arsenals, but their mechanical triumphs have been triumphs of peace—inventing, improving, and multiplying the weapons of peace."

And does the United States want to abandon its "triumph of peace"?

Does it want to discontinue "inventing and improving and multiplying" the instruments of peace?

Does it want, like alien nations, to devote itself to multiplying and persistently employing implements of murder and destruction?

How will that benefit our people?

How will that please the good God who has showered unnumbered blessings upon us, probably because we are a Nation of peace and progress and liberty, and not a Nation of war and hate and tyranny?

Perhaps God loves us because we have beaten our swords into plowshares.

Shall we now, in the heat of hate and anger, beat them back into the bloody instruments of war?

Yes! If we shall be fighting in our own defense, or for some genuine high purpose; but shall we fight merely to determine which foreign national shall dominate the continent of Europe or the continent of Asia?

Should we not rather heed the plea of our former President for calm thinking, reason, and deliberation and his warning that the

country must not jeopardize aid to Britain and the future of America by unthinking emotional action?

The United States today is unprepared, said the ex-President, but "the potential might of this Nation is the strongest thing in the whole world."

Then should not that might and menace be employed to bring about not the disasters of a long and indeterminate war but rather the blessings of a just and enduring peace?

Is not that a nobler endeavor?

Let us, therefore, be insistent in this higher aim, "and let us not be weary in well doing."

"If," as the Pope reverently writes, "our prayers and aspirations have not as yet had the result which we ardently desired, our trust in God must not be lessened on this account, but we must all continue with constant and persevering devotion to be 'patient in tribulation, instant in prayer.'"

The Late Brig. Gen. William L. Mitchell

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

RESOLUTION BY THE ILLINOIS STATE LEGISLATURE

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include herewith House Joint Resolution No. 21, recently passed by the Illinois House of Representatives and concurred in by the State senate. It calls to the attention of the Congress the injustice and unfair treatment administered to the late Brig. Gen. William L. Mitchell. The name of General Mitchell should, without question, be cleared, and I am glad the Legislature of the State of Illinois has called this to the attention of the country.

House Joint Resolution 21

Whereas the late Brig. Gen. William L. Mitchell enlisted in 1898 at the outbreak of the Spanish-American War as a private in the First Wisconsin Infantry and saw active service in Cuba and the Philippine Islands; then served on the Mexican border in 1912; and was repeatedly decorated during the World War by Congress and by several of our Allies for repeated gallantry and giving exceptional example to his fellow soldiers; and

Whereas he rose from the ranks during 28 years of spectacular achievement, having been the first American officer to fly over the trenches during the World War, the first American to scout troop movements by plane, commanded the largest concentration of airplanes in the then history of aviation; and

Whereas he continued to pioneer aviation progress by proving the feasibility of transcontinental flight, as a result of which our air-mail system was instituted; and

Whereas from 1920–24 he served as assistant to the Chief of the Army Air Service, in charge of operations and technical development, in which position he contributed invaluably to the development of military and civil aeronautics; and

Whereas he strove to impress his superior officers with the shortcomings and deficiencies in the Army and Navy flying units only to be rebuffed and demoted; and thereafter the crash of the dirigible *Shenandoah* and failure of Navy's flight by plane to Hawaii prompted him to charge incompetency on the part of his superiors and criminal neglect of national defense; and

Whereas although a separate inquiry substantiated the truth of his accusations, he was tried by a court martial for violating the ninety-sixth article of war, found guilty of a breach of discipline and suspended from the service for 5 years without pay but still subject to call; and

Whereas the practical effect of this decision was that the pride and dignity of military officials must be protected at all costs even at the risk of jeopardizing the effectiveness of national defense; and

Whereas General Mitchell's fearless adherence to principle resulted in his sacrificing his personal ambitions in an effort to arouse the Nation to a knowledge of its military helplessness; and

Whereas developments arising from the present European conflict demonstrate incontrovertibly that General Mitchell was possessed of prescience which placed him many years ahead of his colleagues; and

Whereas the stigma upon his memory should be officially eradicated: Therefore be it

Resolved by the house of representatives of the sixty-second general assembly (the senate concurring herein), That we respectfully petition the Congress of the United States to take such official action as may be necessary to clear the name of this soldier and patriot to the end that he who stood his ground, though persecuted, may be completely and forever cleared, and that a copy of this preamble and resolution be delivered by the secretary of state to each Member in Congress from Illinois.

Adopted by the house March 26, 1941.

ELMER J. SCHNACKENBERG,
Speaker of the House of Representatives.

R. R. RANDOLPH,
Clerk of the House of Representatives.

Concurred in by the senate April 30, 1941.

HUGH W. CROSS,
President of the Senate.

EDWARD H. ALEXANDER,
Secretary of the Senate.

Dawes Endorses Hoover

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short news clipping from the New York Herald Tribune:

[From the New York Herald Tribune of May 14, 1941]

DAWES ENDORSES HOOVER—SAYS ADVICE AGAINST CONVOYS AND WAR IS "VOICE OF REASON"

CHICAGO, May 13.—Charles G. Dawes, Vice President in the Coolidge administration, said today that "I strongly endorse" the advice of former President Herbert Hoover against using American warships as war convoys and against participating in the war in any manner.

General Dawes' statement was: "I strongly endorse the statement of Mr. Hoover. It is the voice of reason, of experience, of patriotism, and of statesmanship. It is also the voice of wisdom and will be a guide to his fellow countrymen."

Ships and More Ships

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

LETTER FROM MR. PAUL N. CARTER, OF SIERRA MADRE, CALIF., AND AN EDITORIAL FROM THE LOS ANGELES COMMERCIAL NEWS

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent, Mr. Paul N. Carter, a keen student of our foreign relations and particularly those with Latin-American countries. The editorial referred to in his letter is also included:

SIERRA MADRE, CALIF., *May 12, 1941.*

Hon. CARL HINSHAW,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: As one who still believes there is an honorable road to peace without sacrificing all this country holds dear, I am taking the liberty of enclosing the attached editorial taken from the Los Angeles Commercial News of May 9, 1941.

Clarence Martin, in his editorial, has pointed out clearly some of the economic phases of this conflict concerning which the general public hears little. If our own way of life is to continue after hostilities cease, and assuming that some way may yet be found to keep us from active belligerency, considerable more attention must be given to the preservation of our economic front through adequate shipping facilities.

As pointed out in the attached editorial, we are following a course which will seriously cripple our efforts to maintain essential trade contacts both now and after peace comes.

Administration spokesmen repeatedly stress the importance of creating hemispheric solidarity. In order to attain this result it is essential to establish military coordination; but I believe even more important to foster wherever possible, economic independence of Latin-American countries from Europe. To attain this result steps should be taken to develop those Central and South American natural resources which will complement and supplement our own. Much of the raw material we obtain from other parts of the world could be produced in Latin America. By long-range planning and capital investment, a tremendous two-way trade could be developed.

To this end it seems short-sighted not to use a major portion of our defense and lend-lease funds to create among our Latin-American neighbors an economic defense through which a satisfactory peace may be won. Overseas trade will be a major factor, and its protection can only be maintained through preservation and further development of our merchant marine.

Trusting you may be able to make use of the attached editorial, I am,

Sincerely yours,

PAUL N. CARTER.

[From the Los Angeles Commercial News of May 9, 1941]

There are a few facts of American attitude toward the European war which are so clear they cannot be questioned. First of these is that the United States desires a British victory and is willing to extend every resource to that end. This is not only the earnest wish of the Washington administration, but of the vast majority of the American people.

The second fact is that ships and particularly American ships will be the most important factor in the conduct of the European war, for without ships England must starve and surrender.

The cry of "Ships, and more ships for Britain" is ringing in the ears of every high Washington official. We hear of plans for taking 2,000,000 tons of American ships and turning them over to the British for war material transport. We hear of plans to take over the entire intercoastal fleet, most of the Great Lakes fleet, and if necessary to close the Panama Canal.

We think the time has come for plain talk and pointed questions.

The American merchant marine is asked to sacrifice established trade routes and turn over 2,000,000 tons in American ships—while Britain maintains an almost normal foreign commerce in routes not connected with the war effort. This nonwar commerce is carried on with a fleet approximating 2,000,000 tons.

High British officials have said that every available British ship is used in the Empire war effort. That statement is false.

On the Pacific coast appear many display advertisements offering de luxe summer cruises to Alaska in British ships; British vessels still ply the trans-Pacific routes in trades remote from any war effort; British affiliated ships maintain a regular schedule from the Pacific coast to South America in competition with American ships and American firms; much of the Central American fruit arrives in British affiliated bottoms in competition with American vessels; British merchant lines still run from the West Indies to the United States in competition with American ships. Beyond the Western Hemisphere there are similar examples of British trade routes maintained in spite of the war.. There is the British commercial trade to Africa, India, and the Orient.

Rumbles of protest of the dual British effort of war and trade were heard in Congress this week as Representative JOHN M. ROBSION, of Kentucky, charged that the British are now using an 8-to-1 tonnage superiority to compete with American shippers in Western Hemisphere commerce.

ROBSION quoted Lloyd's figures to show that Britain had 21,000,000 tons of merchant shipping at the start of the war and acquired 12,230,000 tons from Norway, Holland, Belgium, and France. The United States, he added, has already turned over 1,500,000 tons and is building an additional 3,000,000 tons.

It is true that if the British should withdraw vessels from nonwar routes that British foreign commerce would suffer—but supply of the British military forces would be more secure if the vessels were used for war transport.

If it is a question of whether the British should maintain normal overseas commerce at the expense of the scanty American merchant marine, we think there is only one answer, and that is the protection of our own.

The United States is already engaged in a vast shipbuilding program, most of which is intended to aid the British. More than generous aid is on the way to Britain and vastly more to go.

Any plan for the strangulation of American foreign commerce while Britain moves surplus ships in normal trade calls for the most vigorous protest from American shipping. American steamship men, usually with a weak voice in public affairs, for once should make themselves heard.

CLARENCE MARTIN,
Editor, Commercial News.

Is Hitler Financed By America's Defense Program?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

ARTICLE FROM CLICK MAGAZINE

Mr. SABATH. Mr. Speaker, I have in my hand an article from the current issue of Click magazine which I think raises a problem we will sooner or later have to deal with under our national-defense program.

The article is entitled "Is Hitler Financed By America's Defense Program?" The question is then answered in the text and documentary evidence accompanying it. It is shown that the Nazis get a "kick-back" on almost every airplane we build for ourselves or for Britain through patent assignments and licensing arrangements.

The company concerned in this article is the Rohm & Haas Co. and its affiliates, of Philadelphia. This is a large plastics manufacturing concern with monopolies on several products vital to our national-defense program. Some are indispensable on airplanes; others are used in torpedo boats. One of the affiliates of this firm was organized with the assistance of a German corporation. This German corporation got 30 percent of the stock in return and has had at least one representative on the board of directors ever since.

As the magazine says:

Something must be done now about the American stream of contributions to Hitler's war machine. The Army and the manufacturers who supply it have no normal way of determining which of the companies that deal in military essentials share their defense profits with Hitler. Congress alone has the power to correct this dangerous situation.

In order that all my colleagues may read this article, I ask unanimous consent to revise and extend my remarks and include the article therein.

The article follows:

[From Click of June 1941]

IS HITLER FINANCED BY AMERICA'S DEFENSE PROGRAM?—CLICK EXPOSES THE WAY UNITED STATES DOLLARS FLOW INTO THE NAZI WAR TREASURY

On almost every airplane, from the tiniest pursuit ship to the giant flying fortresses, on torpedo boats, even on the houses built for the men who forge America's arms, Hitler gets a kickback.

The Nazi bombs that pulverized Coventry and Birmingham, the German tanks that rolled into the Low Countries and France, might have well been labeled "Made in United States of America," because American dollars helped pay for them.

During the last World War thousands of Allied soldiers were mowed down by shells made in their homelands and sold to the Kaiser by unscrupulous munitions makers. But it wasn't until 1935 that the Nye munitions committee of the United States Senate exposed this. This time we are supplying Hitler with the one thing he needs more than munitions—American money.

The story of how Click discovered one of the big leaks in the dam this democracy is erecting against the Nazi tidal wave is as fantastic as any detective thriller ever written. On February 17, a Mr. John F. Bergin appeared at our Philadelphia offices. Nervously he handed us his card, on which appeared the name "Rohm & Haas Co."

"We understand you believe we have Nazi connections and are investigating us," he said. "We've even been investigated by the F. B. I. and given a clean bill of health."

The knowledge that the F. B. I. never releases such information led us into our own investigation.

We discovered that Rohm & Haas is a chemical firm, making several products important to warfare. Among these are leather tanning compounds, adhesives, and the Plexiglas that goes into the noses of our bombers. We discovered that Rohm & Haas, of Philadelphia, is related to Rohm & Haas, of Germany; that Rohm & Haas is linked with the infamous I. G. Farbenindustrie, of Germany, which as far back as 1934 was spending $25,000 a year for Nazi propaganda in America; that the mysterious Mr. Bergin has acted as attorney for both Rohm & Haas and I. G. Farben in at least one Hitler-approved patent deal; and that American dollars flow from Rohm & Haas, United States of America, to Rohm & Haas, Germany. But that's not all we discovered.

Pudgy-faced Walther Funk was Hitler's economic adviser long before he became Nazi Germany's Economic Minister. When, on October 28, 1939—a month after the war began—Funk declared that economics would play as great a role as Stukas in the conflict, the statesmen of the non-Nazi world sat up and took notice. To many of them it was their first hint that Germany was prepared to fight democracy on the economic front, too.

One of Germany's most potent weapons on this front are the royalties her huge trusts collect from all over the world.

The Rohm & Haas companies in America control over 400 patents, most of them German. About 90 percent of these German patents were assigned to Rohm & Haas Co. and its subsidiaries after Hitler took power. Six years ago Rohm & Haas Co. made a deal with Rohm & Haas A. G. to pool their patents. Company Officer S. C. Kelton admits the Hitler government approved this deal.

These patent assignments and licensing agreements divide world territory with the German corporations. They usually limit Rohm & Haas Co. to the United States. Whether or not these arrangements are violating the United States antitrust laws is something for the Department of Justice to decide. Through these secret licensing agreements more American money reaches the Nazis.

We tried very hard to see Otta Haas, head of Rohm & Haas in the United States. But Haas has always been a hard man to reach. Forty years ago, with the late Otto Rohm, Haas formed a chemical firm in Germany. They made tanning products. Soon Otto Haas arrived in Philadelphia to set up an American branch of the firm. Rohm remained in Germany.

Although Haas became an American citizen, the Government took over Rohm's half interest in the firm during the first World War and later sold it for $350,000. Within a few years Haas bought it back for $400,000.

Even before the Government stepped in during the World War, Rohm & Haas Co. was always a closed corporation. None of the standard industrial directories lists its officers. Otto Haas is mentioned in Chemical Who's Who, but a notation reads, "Could not be verified." A United States Government official says, "The company deserves a leather medal for secrecy."

German patents have been the backbone of their business from the earliest days of their activity. Within 5 years of the sale of Rohm's stock another corporation was established by Otto Haas—the Resinous Products & Chemical Co. Nazi enterprises own 30 percent of the stock of this Rohm & Haas affiliate, which pays royalties to Hitler corporations.

As we in America prepare our defense against Hitlerism we should bear in mind what Nazi Economics Minister Walther Funk wrote in October 1939: "Modern war is only partially won by weapons. Facing totalitarian attack, we have arranged totalitarian defense." Even if sent unwillingly, American dollars transmitted to Hitler are bulwarks of his totalitarian defense.

Click feels that something must be done now about the American stream of contributions to Hitler's war machine. The Army and the manufacturers who supply it have no normal way of determining which of the companies that deal in military essentials share their defense profits with Hitler. Congress alone has the power to correct this dangerous situation.

Incorporated in the article are numerous photographs. Many are documentary, and appear as exhibits. Others, which are not suitable for reproduction in the CONGRESSIONAL RECORD, are described or summarized.

Exhibit 1 is a photograph of an employee of Rohm & Haas working on a plexiglas nose for a bomber. The following explanation appears:

The Nazis cash in on every one of these plexiglas bomber noses made by Rohm & Haas Co. in its Bristol, Pa., plant. Profits on plexiglas sales account for a large part of the royalties Rohm & Haas send to Germany.

Exhibit 2 is a photograph of United States bombing planes, with plexiglas noses, in flight.

Exhibit 3 is a reproduction of a release of the Office of Government Reports, National Defense Series, No. 5, September 20, 1940, showing a contract granted by the Army Air Corps to Rohm & Haas Co. for "Transparent Plastic Sheets," in the amount of $138,267, the largest contract listed on the page, with the following caption:

Rohm & Haas sells vast amount of plexiglas directly to the Government, as these reports reveal. But these sales represent only a fraction of their defense orders. Most of the firm's orders are placed directly by private aircraft manufacturers. The size of military-plane orders is kept secret. But count the number of bomber noses and gun blisters Rohm & Haas sells, and you can almost deduce the number of additions to our Air Force.

Exhibit 4 is a photograph of the Digest of Assignments ledger of the United States Patent Office and a photograph of a letter to the Commissioner of Patents, Washington, D. C., from the Rohm & Haas Co., together with the caption:

The Nazi chemical empire's deals in the United States are revealed in the official patent assignment book in Washington. Note that J. F. Bergin appears as attorney for both I. G. Farben and Rohm & Haas, of Philadelphia. On the surface, there is no significance in the transfer of a leather tanning patent from one firm to another. It is only when you realize that I. G. Farben—a heavy supporter of Hitler even before 1933—controls 40 percent of Germany's vast chemical empire that the link strikes home. Of equal importance is the revelation that I. G. Farben evidenced such complete trust in the Rohm & Haas Co. attorney, J. F. Bergin, that they retained him to act as their American attorney in this deal. It happens that in I. G. Farben the Nazis find two of the vital elements of modern total warfare—chemicals and money. Deprive a modern army of its chemicals and its gold for just one day and you seal its doom. Deals like this one help I. G. Farben keep going, keep Hitler in the cash it takes to run a streamlined war, as well as the cash needed to spread Nazi propaganda in this country. In I. G. Farben, Hitler has one more bulwark to rely upon.

Exhibit 5 is an official Nazi propaganda photograph of a young lady wearing a Plexiglas bridal crown and a photograph of the reverse side of this picture showing its origin, and the caption:

NAZIS CONTROL PLEXIGLAS

To Click's investigator, a Rohm & Haas Co. official, S. C. Kelton, admitted that for every ounce of Plexiglas that goes into American military planes a royalty is paid to Rohm & Haas Aktiengesellschaft (or A.-G.), of Germany, the parent corporation of Rohm & Haas Co. and the originators of Plexiglas. Like all German corporations, Rohm & Haas A.-G. must be pro-Nazi if it is to remain in business. And this firm is very much in business—Nazi business. This photo of a Plexiglas bridal crown was proudly released by official Nazi war propaganda bureaus in June 1940 and then mailed to all of the leading papers in America.

Exhibit 6 is a photograph of an assignment of application for patent in which Inventor Walter Bauer assigned a basic plexiglas patent to Rohm & Haas Aktiengessellschaft for 10 marks; with caption:

The German origin of plexiglas is clearly evident in this official Government document. Assigned by the German inventor to Rohm & Haas A. G. for 10 marks in 1929, the patent was subsequently reassigned to Rohm & Haas Co., of Philadelphia. The inventor assigned only the United States rights to Rohm & Haas A. G. in this paper, still the United States Rohm & Haas Co. sells plexiglas to the entire Western Hemisphere. Investigators suspect that this may be the result of a secret licensing agreement.

Exhibit 7 is a photograph of an assignment of patents to Rohm & Haas Co. by Rohm & Haas A. G., including the two basic Plexiglas patents, with caption:

Protection for Nazi patents against seizures like those of World War I may be the aim of these assignments. On July 7, 1935, in Germany, Rohm & Haas A. G. made out this legal form assigning a whole slew of its most valuable chemical patents to Rohm & Haas of Philadelphia. The first two patents listed are the basic Plexiglas patents. Rohm & Haas Co. took its time about filing this form with the United States Patent Office. In fact, it took 5 years and 4 months before it registered this assignment. But after Roosevelt's reelection in November 1940 the war feeling against Hitler was rising here. As a German corporation, Rohm & Haas A. G. is more likely to have its patents seized in event of war than an American firm.

Exhibit 8 is a photograph of excerpts from a series of annual corporation reports by an affiliate of the Rohm & Haas Co.—Resinous Products & Chemical Co.—showing the continuing presence of Germans on its board of directors, with caption:

German directors always sat on the board of an interesting affiliate of Rohm & Haas Co., the Resinous Products & Chemical Co., a Delaware corporation. Originally some 30 percent of this firm's stock was owned by Chemische Fabriken Dr. Kurt Albert A. G. of Germany. In fact, Dr. August Amann served as a director of both Chemische Fabriken Albert and Resinous Products until 1938. In 1939 Amann and Hermann Glock, the two German directors of Resinous Products, were replaced by two other German citizens, R. Haller and H. Ackerman. Nearly a year before Hitler invaded Holland, Haller registered as a resident of Rotterdam. During the first World War German firms established Dutch offices to get around British and American restraints. Recently Chemische Fabriken Albert assigned its holding to Chemie Holding A. G., a Luxembourg corporation. Forming Luxembourg corporations is the current German verson of the Dutch legal-address dodge of 1914.

Exhibit 9 is a photograph of a United States trade-mark registration for Tego, a plywood bonding agent; photographs of the assignment of this trade-mark to the Resinous Products & Chemical Co. by Th. Goldschmidt A.-G.; and a photograph of a United States Navy airplane, made with Tego; with caption:

Hitler shares Tego profits, too. As the documents show, Resinous Products bought the American rights to Tego from Th. Goldschmidt A.-G. of Germany in 1934. Goldschmidt is one of the most important Nazi chemical corporations. The assignment was made through the American consulate at Cologne. A cementing film, which makes a tough, plywood bond, Tego is used to make plywood—like the plywood in the wings and the fuselage of Navy planes—stronger than steel of equal weight. This makes Tego valuable to the United States both in aviation and in the construction of homes for defense workers and military people. It also makes it a great source of revenue for the gold-hungry Nazis. The coming boom in mass-produced plastic planes may make Tego royalties the most important Nazi gold source in the United States.

Exhibit 10 consists of five photographs—one showing the Rohm & Haas plant at Bristol, Pa.; another showing the Resinous Products & Chemical Co. plant, adjoining the Frankford Arsenal, in Philadelphia, Pa.; a photograph of American bombers for Britain, with plexiglas used; a photograph of a plexiglas violin; a photograph of a plexiglas fish bowl shaped like a human body—with caption:

Whether in bombers or glass ladies, plexiglas is still one of the steadiest sources of revenue the Nazi war chest has in America. The American anxiousness to adopt any new commodity has opened many doors to this new transparent plastic. The thousands of World's Fair visitors who first became aware of plexiglas when they stumbled across the startling plexiglas lady, similar to the fish bowl will be even more surprised to realize how much plexiglas is already figuring in their daily lives. In one of a hundred different usages and forms, plexiglas has been with them for several years. It might be in the dial of their auto radios, the frames of their new hairbrushes, in their new

shatterproof eyeglasses, or in the unique new signs in their store windows. No matter where they see it, it is still piling up royalties for Nazi firms. Today the great bulk of plexiglas royalties comes from American defense orders.

Defense Jobs for Negroes

EXTENSION OF REMARKS

OF

HON. THOMAS H. ELIOT

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM THE WALTHAM (MASS.) NEWS-TRIBUNE

Mr. ELIOT of Massachusetts. Mr. Speaker, last week I brought the attention of the House to the very fine statement by the Committee on Negro Americans in Defense Industries. Today, under leave to extend my remarks, I include an excellent editorial on the same subject from the Waltham News-Tribune. This progressive daily points out that discrimination against Negroes is not only undemocratic but may prove of serious hindrance to the rapid progress of the defense program.

The editorial states, "Our Negroes are 100 percent Americans," and the editorial is 100 percent right.

The editorial is as follows:

[From the Waltham (Mass.) News-Tribune of May 9, 1941]

DEFENSE JOBS FOR NEGROES

Dr. Anson Phelps Stokes, president of the Phelps-Stokes Fund and chairman of the recently formed Committee on Negro Americans in Defense Industries, is everlastingly right when, urging increased employment of competent Negroes in defense industries, he said: "Justice for Negro Americans in the program for national defense is a searching test of American democracy. Our concern for democracy in Europe or elsewhere lacks reality and sincerity if our plans and policies disregard the rights of minorities in our own country."

It has been alleged—and probably with considerable truth—that some manufacturing concerns of national importance, engaged on national-defense contracts, have discriminated against Negroes, without regard for their ability or fitness to fill the jobs they seek. Such discrimination is not only undemocratic, but, in view of the reported dwindling surplus of skilled labor may prove a serious hindrance to rapid progress of the defense program.

Here is a great reservoir of labor whose loyalty cannot be questioned. Our Negroes are 100 percent Americans. And also their efficiency is probably high, if given an opportunity to develop it—an opportunity they assert has frequently been denied even when they seek admittance into training and apprenticeship programs financed by the Federal Government.

It is said that Negroes are often surprisingly capable of operating precision machinery because they have good muscle coordination and sense of rhythm.

The handicap of color, like the handicap of age, apparently has been overestimated. As these facts are accepted, there may be many more Negroes taken off the charity rolls and the W. P. A. and given useful jobs aiding both industry and their country.

Louisiana Under Governor Jones

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. HÉBERT. Mr. Speaker, 1 year ago today at precisely this hour the "Louisiana hayride" ended, but the memory lingers on.

One year ago today in Louisiana the fetters and chains which bound a once free people in the only totalitarian government ever set up on American soil within the boundaries of a sovereign State came to an end when Sam Houston Jones shook his wrists free of those manacles and lifted his right hand toward God and took the oath of office as the Governor of Louisiana.

Appropriately did Governor Jones remark on that occasion:

Louisiana has returned to the Union.

Mr. Speaker, in the last 13 years there has been written, in Louisiana, one of the most fantastic stories of political history of all time.

For 12 of those 13 years, from 1928 until 1940, there was conceived and developed a dictatorship which attempted to deny to the people of Louisiana the very rights and privileges guaranteed under the Constitution.

If that dictatorship ultimately did fall, it was because it had failed in one important essential—control of the press.

If the press of Louisiana had been successfully throttled and controlled, Mr. Speaker, Louisiana today would probably have still been under the influence of that sinister dictatorship. But the press of Louisiana was not to be controlled and because the press of Louisiana was not to be controlled I am able to stand here today on the occasion of the first anniversary of the fall of that dictatorship and pay tribute to Sam Jones and the administration which he has headed since May 14, 1940.

It is of interest, Mr. Speaker, that on the anniversary of the first year of this new administration in Louisiana there should appear on the bookstands of the Nation the printed history of what went before Sam Jones became the Governor of Louisiana, and drove the rascals out of office, put the crooks behind prison bars, and made Louisiana, once again, a decent place in which to live.

It is also proper and fitting, Mr. Speaker, that this printed history should come from the hand of a newspaperman, a newspaper reporter who arrived on the scene at the birth of the dictatorship and saw its rise to power and its fall into oblivion.

I am proud that a newspaperman has written such a story and has contributed a book which in the future will be found on the shelves next to other histories of trying and critical times in our Nation's history.

I am proud that a newspaperman has written such a book and even more proud that this newspaperman was a contemporary of mine when I, too, covered the political front of Louisiana as a reporter and later directed the reportorial attack against this vicious machine from the city editor's desk of the New Orleans States under the guiding influence of that grand, gallant, and valiant editor of the old school of journalism, James Evans Crown.

Harnett T. Kane of the staff of the New Orleans Item has written what he calls Louisiana Hayride—the American Rehearsal for Dictatorship.

Mr. Speaker, I direct your attention and the attention of my colleagues in the House to this splendid contribution to current literature. I urge you to read it, to study it, and to take a lesson from it.

Within the covers of Louisiana Hayride is presented the almost unbelievable and fantastic story of what can happen in any State in the United States, just as it happened in Louisiana, if we do not believe that "eternal vigilance is the price of liberty."

Harnett Kane has written a factual story of the rise and fall of the Louisiana dictatorship. He has painted a vivid picture, colored with tragic humor, which sounds a warning to the people of every sovereign State to beware lest they too fall under the heel of a local demagog. Oh, yes, my colleagues, it can happen in America, it can happen here, it did happen in Louisiana. Do not let it happen in your State.

On the first anniversary of the new order in Louisiana it would be well to recall what happened between 1928 and 1940, and I know of no better manner in which to bring those years to your attention and to submit to you for consideration the words of this able author of Louisiana Hayride.

Harnett Kane has called the preface of his book, The Morning After. Indeed, it was a morning after the night before—a black, hideous night which lasted for 12 years.

As an introduction to the review of the first year in office of Sam Jones, Governor of Louisiana, I include in the RECORD, with the unanimous consent of the House, these words from the pen of Harnett Kane in Louisiana Hayride:

THE MORNING AFTER

Louisiana has swept America's first dictatorship into history. Twelve years ago its people went on a spree—a Louisiana hayride for 2,000,000 men, women, and children. They jolted, they jerked, they rolled happily in the straw over a bumpy but exciting road. They paid their fare; they knew, most of them, what they were getting; they liked it while they were getting it. They had little to say about their destination, but they did not mind that much. They giggled, they gasped, they held their breaths, and the show went on around them, among them, for them.

And word spread that there was room aboard for others, and these came running. From other States, from other regions, this bayou folks' bacchanale drew new audiences,

new participants. There were those, in time, who saw it change its character; saw the hayride emerge as the vehicle of a national juggernaut, its potential victim America.

A gun spat, and the first driver toppled. But he had hitched his vehicle to a force that took it onward. The self-designated Kingfish, Huey P. Long, was dead. Long live the Kingfish. Other kingfishes grabbed the reins and held them for the years that followed. The pace slackened. The riders calmed a bit. But the wagon still rolled, and the drivers still collected their tariff at intervals. Then, in 1940, came wreckage.

Soberly the people of Louisiana are looking backward today, some of them convinced that they were passengers on a test trip, a political try-out in advance of others that might have brought a different manner of life and outlook for all of America. Over, at least for the time, is a thing that most Americans thought impossible; a systematic totalitarianism on North American soil, functioning under the Constitution, under the flag, to the tune of the Star-Spangled Banner—with some minor notes of Dixie.

The most complete despotism in the Nation's history used the institutions of democracy to crush democracy. Through bad years and good years, depression and prosperity, it met the test; it worked. Like most modern dictatorships, it began with revolution, a poor-white rebellion. It went on to shift that rebellion's course, to betray it in a series of deals and understandings with most of the groups it attacked, and in a saturnalia of corruption, from its start to its end.

This full-dress rehearsal of an American tyranny came not through surrender to a power from without, as some fear dictatorship may strike, nor through appeasement of a force that was feared. It was a conscious acceptance of a regime that applied, slowly at first, then with increasing boldness, the old prescription for power, with new touches; bread and circuses—dispensations from above, free food and vaudeville—in return for acquiescence.

Its master was the first American demagogue to become a national threat; the first to clutch and use with machine-gun ruthlessness the current tools of mass propaganda and the instruments of violence, including State and National militia. The men who followed him at the reins were simple mediocrities who had learned a lesson and learned it well enough to serve their purpose. The dictator went, but enough of the dictatorship remained to keep a State in bondage while a heritage was stolen from it.

Huey, the Kingfish, loved power too well. His successors loved money too well. Between them, they bribed a people. In Louisiana's shifting background, in the currents that swirl about the South as a whole, it was all too easy for either gold or favor to corrupt. These 12 years have given America a liberal education in the seducing of a populace.

In place of freedom or the approximation of it which Louisianians had enjoyed, the State took "benefits." For a measure of security it swapped the kind of constitutional protections it had known. It received magnificent roads, tall bridges; eventually it gave its Louisiana fuehrers a reichstag that might have pleased a Hitler in its deep-sweeping subservience. The State took free school books for its children, new hospitals, new buildings; and it said little or nothing while its judges were caged. It accepted jobs and retainer fees, while it lost the right to have its vote counted as cast.

Year by year the pattern developed more clearly; legislators bought, in the dictator's words, "like sacks of potatoes"; a kept judiciary, up to and including the highest court in the State; quick ruin for the enemy, smiling benevolence for the friend.

Some may look on the Louisiana adventure as an isolated phenomenon, a fluke. It was not that, but the outgrowth of a politico-socio-economic problem that cried for solution. Louisiana's dictatorship arose out of the abuses of democracy that preceded it. His enemies made him by their puerile tactics; so it has been said of Huey Long, as it was said of Hitler and his social democratic opponents. But Louisiana's regime of force, like Germany's, was born of influences that went back for generations, that grew out of a demonstrated condition of inequity. Like other modern dictatorships, it placed its finger on deep-seated wants and needs, and it promised to meet them. Its slogan was "Share the Wealth." Its crusading evangelical creed quoted the Bible and cried Old Testament wrath on a nation that had not heeded its version of the Book's meaning.

Its appeal was national as well as regional. At one point "Share the Wealth" crossed the Mississippi, moved into the industrial East, sent propaganda arms into the Middle West and far West. The movement claimed 6,000,000 to 7,000,000 members, so threatening the Democratic Party, and potentially the Republican as well, that the professional prognosticator Farley feared that it might bring his party to a crisis. Millions of Americans believed that under the banner "Every Man a King" they would receive a fixed income, land, a home, perhaps an electric refrigerator and other guaranties of security. These millions were ready to back their man to the limit in an effort to achieve these objectives.

The tale is a tall one, a saga of tall ones. Absolutism came to Louisiana with a grin on its lips, a jest on its tongue. The Long men meant business, yes, but they were also Louisianians; and life can be funny at the same time it is venal. A gallery of engaging rogues, of highly diverting rascals, is the result: Cajuns of a smiling amorality; Italians of underworld background that did not bar them from public honors; Jews who grew wealthier by the process of special favor that speaks all languages; plain Anglo-Saxon thieves, fat men who grew fatter, lean and hungry men as dangerous as they looked. They advanced from rank as barbers and hot-towel men to masters of great estates; from shoe clerks to connoisseurs of expansive living. They invested in gold toilet fixtures. They dug private lakes. They named airports after themselves, to commemorate such arrangements as 2-percent cuts on the materials used therein. They built steam-heated shower baths for their cattle and pigs, ordered air-conditioning units for their own bathrooms. "Share the Wealth" was a slogan they understood well. There was so much to share that they stuck together almost to the end, one for all, all for one thing. They knew exactly what they wanted—everything in sight.

In the process, they took roles in a melodrama as wild, as picturesque, as fantastic in its drolleries as any in modern American history; an era marked by civil insurrections, riotings, and beatings in the legislative halls, by burlesques, bullets, and whimsy, mixed in the grand manner. The first dictator was a lusty, gusty fellow. His post mortem apprentices, carrying on for the master, were a "codfish" aristocracy, of gargantuan taste and humors.

Less than a year before the crash, the Louisiana State machine was ticking along serenely. Opposition had been purchased or crushed, or lay supine in the shade. Over Louisiana shone the sun of a golden Federal favor, showering rays of largesse. Then came one of the most odorous of American State scandals, one of the broadest gaged Federal inquiries in the history of criminal procedure.

Convicted, or awaiting trial or sentence, are the once political great of Louisiana, the near great, and the little great. Two hundred and fifty indictments have broken about their heads, against the machine's governor; the president of one of the South's leading universities; legislative officials, mayors, heads of major departments, millionaire racing and gambling men, allies of eastern gangsters; the leading contractors, architects, and builders; the president of the State medical society, doctor-managers of institutions, tax experts, W. P. A. assistants. Not least, a lady notary described as the Madame Queen (no relation to the Kingfish) of an alleged racket to reduce the taxes of all who would kick back half to the officials and their assistants.

Going, too, perhaps, is a legend of latter-day American tradition, Huey the Martyr. His specter had stalked the South, waiting in the twilight of its swamps for a day in which it might rally the Nation to a newer totalitarianism. Now, Louisiana believes, the ghost may have been laid. For the trail of deep-rooted crookeries goes back to this dictator and his doings, and tends to dissipate the illusion of a great man whose only thought was for the economically bereft.

Louisiana knows that it paid a higher price than the "benefits" of the hayride were worth. For every dollar that it gave the dictatorship took another in the dark. For the security the regime may have offered it stole the basis of security in the future. Today can be told, and in detail for the first time, the inevitable accompaniments of an authoritarian government the happenings under the surface of a fully operating American dictatorship. It is an exposition of the meaning for a democratic nation of its loss of a system of checks, balances and public sunlight.

But, you may say, it couldn't happen anywhere but in Louisiana. It could happen in almost any American state. Louisiana was divided. So are many other States—rural against urban elements, sect against sect, south against north. Louisiana had, and has illiteracy, want, low health standards. So, too, have other States. The process that succeeded in Louisiana has been tested. As in ancient Rome, as in modern Germany, Italy, and Russia, the politicians, playing upon the ingrown prejudices, the deepest needs and aspirations of their people, promised everything, gained power—and then used that power to multiply taxes, to dig deep into public funds for their own uses, and meanwhile to give back just enough to keep themselves in power.

Louisiana lost much in those 12 years of serfdom. But the period had some partial compensations—the provision of newer public services, a smoothly functioning administrative system, modernization of facilities. The regime took much, but it also gave something. The democracy that preceded it took less. But it also gave less.

Why did the people of an American State, a member of the Union for a century and a quarter, submit to despotism? Some of the reasons were largely local. Others go deep into the State's past and into the regional past. But essentially democracy failed because Louisiana's men and women came to feel that it offered them less than the other form To too many of Louisiana's citizens the rights and guaranties of democracy appeared to be academic exercises.

Democracy may fail in America not because dictatorships' guns are stronger but because the way of dictatorship may seem to hold a promise of greater gifts at home.

At the end, Louisiana changed its mind. But this southern revolt of 1940 against the system that came with 1928 was one which almost failed. Odds were against its success. Held in the hands of a group that boasted, with show of reason, that its dynasty could not be overthrown, Louisianians made the hard choice, then fought to carry it through. From streamlined autocracy Louisiana turned to another testing of the democratic idea. The Louisiana flare-up is more than a nauseous exposé. It is the climax of a significant period in southern history. Will the new regime succeed? Can such a regime offer to a long-kept populace enough to satisfy it? Or will Louisiana turn again to the easier way?

The problem on which this threat to the Nation once arose is still there, still unsolved. Maldistribution of the country's income may be expected to outlast the present war and the defense boom. The fertile

ground of discontent is still thickly sown. The seed of poor-white resentment in the country areas, of have-not yearnings in the cities, lies in the topsoil, ready to sprout under the hot rays of demagogy.

The South, a Southerner may admit, is more fertile than some other sections for this crop. It is still predominantly rural, largely defeatist in its philosophy, a debtor territory, a region in which wrenching poverty is often too common to excite more than casual pity. Will another Kingfish leap across this State or another State, speed by sound truck from hill to hollow, roaring joyously to his spellbound listeners?

A superbly effective sample technique of homebred tyranny has been tested out. The resources of a twentieth-century mass-organized American civilization have been tried upon 2,000,000 political guinea pigs, with results satisfactory to the analysts. Available here, as a result of Louisiana's experience, is a blueprint of a broader American dictatorship that may yet come.

But "the morning after" is ended, Mr. Speaker, and, although there are still traces of the headache, Louisiana can look forward to a brighter day.

Sam Jones has been the most sincere and honest Governor of Louisiana in many years.

True, he has made mistakes since he took office, but, as he himself said last night in an address to the people of Louisiana:

A year ago I predicted I would make mistakes. My friends, I have made them—the kind I said I would make—of the head, not of the heart. We of this administration will make more such mistakes, being human; but we will try to keep the balance in favor of progress and success for Louisiana.

When Sam Jones made a promise during the campaign for Governor, he meant to keep the promise, if humanly possible and within his power. Last night he recited 17 campaign pledges which he had made and described "16 fulfilled to the hilt, and one being constantly promoted in a campaign to fulfill it to the hilt," too.

Could more be asked of any man?

In one year's time Sam Jones has—

Opened long-secret State records so that the taxpayer may know where his dollar is going and how it has been spent.

Pushed legislation to ban double dipping and deadheading, which were among the popular pastimes of the repudiated administration.

Adopted laws designed to reform State election procedure and return to the people the right to a fair and honest election and an expression by the ballot under the democratic way.

Carried through a law that makes voting machines compulsory in New Orleans, and optional in other sections of the State.

Eliminated the State-wide 1-percent sales tax.

Reduced drastically the costs of tax collections, and increased many tax yields through rigid enforcement.

Gave what others had promised, but did not give—a reorganization of the State government, reducing 176 conflicting, overlapping departments, boards, and commissions to 20 clearly defined and modernized departments.

Adopted the first nationally praised and recognized civil-service system in Louisiana's history.

Reduced the automobile license to $3.

Eliminated the prerequisite of a poll certificate to vote.

Put into effect a general reorganization of the State's muddled, sieve-like financial structure so that a saving from this source of more than $2,000,000 in less than 1 year, may be claimed by the Governor's financial directors.

Prohibited deductions from salaries of State employees to fill political hope chests.

Strict enforcement of the State's bitterly disputed oil and conservation laws.

In addition he has continued free school books, homestead exemptions, good-roads program, and all the other appeals of the Huey Long era.

Returned local self government to the parishes and municipalities.

Made it impossible to use the National Guard for political purposes.

Removed Louisiana State University from the politics which had dragged its honorable name into the muck and mire of national disgrace.

Has abolished favoritism in State contracts and thrown the field open to the lowest bidder.

Has obtained for the State of Louisiana more defense training facilities than any other State.

Added 7,000 beneficiaries and $1,000,000 in benefits to the Social Security System.

Removed the port of New Orleans from politics and reduced the pay roll by 2,000 persons.

Undertaking the broadest program of State-financed aid to farmers ever staged in Louisiana.

These are some of the benefits which Louisiana has profited, Mr. Speaker, in the last year in Louisiana, in the first year after "the Louisiana hay ride" ended. These promises kept are but an index to what good, clean government in Louisiana or in any other State can accomplish when honest officials are in charge.

Is it any wonder, Mr. Speaker, that I rise today to draw a comparison of the 12-year political hay ride to the 1-year symphony of sound, honest, sincere government.

I hope no State ever suffers what Louisiana has suffered and from which illness it is now beginning to recover. I do not expect many of my colleagues to fully appreciate the situation, because only those of us who have lived in Louisiana can ever know the full meaning of a dictatorship.

I am proud today, Mr. Speaker, to pay tribute to Sam Jones and his administration for what has been accomplished in 1 year, but I cannot close without also paying tribute to those who stood behind Sam Jones when the going was the toughest and the outlook was not so bright.

To the men and women, particularly the women, of Louisiana, who braved the frigid cold of the winter months to carry into every home the doctrine of good government, I pay tribute. To those of my colleagues in this House who stood shoulder to shoulder with Sam Jones from the very beginning of his fight, I pay tribute.

To the daring and courageous newspapers and their editors and to the reporters who did the "leg work" and the photographers who took the pictures of damning evidence of graft and corruption, I pay tribute.

Above all, Mr. Speaker, I pause at this moment to pay tribute to another Louisianian, who staked his political and financial security in the cause of good government in Louisiana and without whose aid there would not be an administration in Louisiana today headed by Sam Jones.

For 4 years, Mr. Speaker, the voice of Jimmy Noe, former Governor of Louisiana, was the lone voice in the wilderness which cried aloud against existing conditions in Louisiana. It was Jimmy Noe who initiated the widespread investigations into graft and corruption in Louisiana, and who at his own personal expense, obtained damaging affidavits which resulted in turning the spotlight on the rascals.

It was Jimmy Noe, Mr. Speaker, who gave me the tip which resulted in the publishing of the now famous picture of a Louisiana State University truck hauling building materials to the home of a colonel on the staff of the Governor, and which picture and story sparked the Louisiana scandals on June 9, 1939.

It was Jimmie Noe, Mr. Speaker, who, eliminated in the first gubernatorial primary, proved his sincerity of purpose and his loyalty to the cause of good government which he espoused, by rejecting financial and political security to cast his lot with Sam Jones in the second primary.

To the further credit of Sam Jones, let it be recorded that from every public stump in the State of Louisiana he acknowledged the part which Jimmy Noe played in his election, and at a later date following his inauguration made the statement: "I'll forever be grateful to Jimmy Noe."

Yes, Mr. Speaker, I believe that the name of Jimmy Noe should today be linked with the accomplishments in Louisiana during the past year because I do not believe any sound, logical student of Louisiana politics will deny that without the active aid and support of Jimmy Noe the dictatorship would not have fallen in February 1940, and Sam Jones would not have been elected Governor of Louisiana.

The people of Louisiana owe an equal debt of gratitude on this anniversary to Sam Jones and to Jimmy Noe.

Jimmy Noe made it possible for Sam Jones to ascend to the position by which he has been able to accomplish so much for Louisiana. The accomplishments of Sam Jones have given to America a better Louisiana.

Mr. Speaker, I am proud that I am a native Louisianian. I am glad that I have been able to live in Louisiana all my life and have been able to play some small part in what has happened in Louisiana.

I am proud of the fact that the democratic way finally has emerged the victor in Louisiana and that by the ballot a dictatorship has been overthrown.

I am proud that I supported Jimmy Noe in the first primary and I am proud that I stood by his side and supported Sam Jones in the successful second primary which ended, I hope for all time,

totalitarian government in the State which I love so dearly.

I am proud to know that one year after the inauguration of Sam Jones I can still say I am proud of the part which I played in his election because Louisiana today is a better place in which to live than it was a year ago today.

Louisiana Under Governor Jones

EXTENSION OF REMARKS

OF

HON. VANCE PLAUCHÉ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

ADDRESS BY GOV. SAM H. JONES, OF LOUISIANA

Mr. PLAUCHÉ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Gov. Sam H. Jones, of Louisiana, on May 12, 1941:

Ladies and gentlemen, I welcome you to New Orleans and Louisiana. I hope you, as credit men, will find us good risks, so that you will return again next year and through the years to come.

Your visit coincides with the anniversary of a very great event here in Louisiana. Day after tomorrow, at high noon, marks the conclusion of this State's first year of democracy, after more than a decade of grotesque and unbelievable tyranny. One writer has called that period America's rehearsal for dictatorship.

By whatever name called we in Louisiana know that through a long, dark era we lost the fundamentals of freedom made possible for all America by the blood, sweat, tears, and toil of our forebears. In this land of liberty it seems strange to you, no doubt, that an American Governor should, very bluntly and plainly, say to you that his State has just completed its first year of democracy—after a period of despotic rule.

It sounds strange to you because you have never lived in the dark as we have.

You never lived under a law that denied freedom of the press, a law that had to be nullified by the United States Supreme Court.

You never had to live under a law that denied the right of free elections—a law which gave us the right to vote, but gave the leader of one political faction the absolute power to control the conduct of elections and the counting of the ballots—a law in short which did, in Louisiana, what Hitler's edicts do in Germany—but a law, thank God, which was declared unconstitutional by the Supreme Court of this State.

You never had to live in a State where laws were passed which had never been read by the Legislature, the contents of which were known only to the "Fuehrer" many of which were actually written and revised after the "Reichstag" adjourned its 5-day sessions and went home.

You never had to live in a State where the separation of the legislative and executive branches was so completely disregarded that the Governor actually appointed members of the legislature.

And I'm sure you never lived under a system where every single local appointive officer, in every county, municipality, and district, had to be approved by the ruling powers in your State capitol. Well we did.

You cannot conceive of an American State with an American "gestapo" with power to, and which did, control and supersede every local peace officer in the Commonwealth. Nor can you visualize a law which permitted the constabulary to arrest a citizen on a political charge, transport him to a distant locality, lodge him in jail without the benefit of bail by a judge of any court, subject only to release by the "leader of the gestapo." We here in Louisiana can visualize that. We have lived through it. We have seen these things done by authority of laws placed on the statute books by a supposedly free people.

You have never experienced the tyranny, the fear, and the trembling that come to a people where the power of the military was used to subject them to the will of the tyrant. Your laws permit a Governor to call out the National Guard in times of disaster, riot, rebellion, and serious civil strife; our law permitted the guard to be used when "in the opinion of the Governor" it was necessary.

You never witnessed the shameful spectacle of martial law over your State capital city for a period of 6 months at a time. We saw this, day after day and week after week, when there was no disaster, riot, rebellion, and strife—merely political difference.

It is difficult for you to imagine a State whose public records were by law made secret records, whose public books were exempt from the prying eyes of the auditor, and whose citizens were denied by law the right to know what was going on in the several departments of the State Government. Thus it seems strange to you that suits should be brought and seriously contested by which citizens sought the right to look on the inside of public records.

And, I suppose, a government which had the power to, and which did, make and break banks and financial institutions; which, by spite and vengeance, drove industry out of the State or catapulated it to fabulous wealth as it chose; which, by whim or caprice, denied men and women the right to practice their professions and trades, or granted that right without regard to qualification; which held the destinies of private citizens in its hands, with no less power than that exerted by the despots of the totalitarian States—I suppose such a government in an American State seems to you a fiction and a nightmare of the brain.

It was not fiction, my friends; we saw it, lived through it, and, thank God, survived it. A nightmare it was, and one that we shall long remember.

To you, as credit men, it will seem unbelievable that a State with one of the lowest per capita debts should sink its people into the highest per capita debt in the Nation. It seems unbelievable that a State debt could be increased 1600 percent in a period of 12 years. But in spite of the protests of some that it couldn't, it did happen, here.

We saw the pace of industry slacken, factories close, businesses move away and abandon their Louisiana domiciles. We saw commerce driven away and the great Port of New Orleans sink from second to sixteenth place among American ports.

And then, a little over a year ago, we saw a people rebel. We saw the sons and daughters of liberty-loving Frenchmen and the Anglo-Saxon pioneers rise up, as the sons and daughters of freemen will ever do, and strike down the tinpot tyrants and the crackpot corruptionists. We saw a revolution fought on Louisiana's restless soil—a bloodless revolution, it is true; but a revolution just as true and genuine as that which rose against the tyrants of France, or that which was enacted by the barons on the plains of Runnymede, or that which was written in the snow by the blood of Washington's soldiers at Valley Forge.

Our campaign for freedom was fought in the winter, too—in that season when, oftentimes, the spiritual as well as the physical morale reaches its lowest ebb. Not so in the determined days of a winter ago.

A political campaign turned into a holy crusade for democracy. Slaves rose up and rebuked their masters. Men who had cringed before the lash of the dictator suddenly became bold. The spirit of the zealots and pioneers of old suddenly rose once again in their posterity. Religious fervor entered the lists. Women took up the torch. Protestants offered their prayers; Catholics made their novenas; Jews, fighting a familiar fight against tyranny, came to the front.

The inevitable happened. The shackles were broken. The will of free men and free women, as always, prevailed. There was a day of rejoicing. The slow processes of democracy began to work again. Today, after a year, we function as a democracy again.

The dictator laws are gone. There is freedom of press, freedom of speech, freedom of assembly once again.

There is democracy within the state and down to each locality and subdivision. No totalitarian ruler issues decrees to his subjects. No Gestapo throws fear into the hearts of free men. No military commander rules in the name of the Governor. Martial law no longer rules our capital city. And gone are the laws which made free men slaves.

The books of the state are open—opened to the hilt, and every single transaction, over the dark days, is being brought under the searchlight of merciless audits. Now any citizen may walk into any department and see for himself the workings of his government.

Banks are free. Industry is coming back, literally by the hundreds of millions. Employment is up 50 percent above the national average. More than a thousand workers per parish have gone back to gainful employment. Commerce is gaining, notwithstanding the perilous days for maritime traffic. Never has the picture been brighter.

We in Louisiana are proud of our year of democracy. It has been arduous, full of headaches, setbacks, and tangles, and misunderstandings, but it has been finally crowned, I believe, with a success which the people of the State as a whole do not yet fully realize.

And what will be of particular interest to you is that Louisiana has become a good risk, morally and financially, not only within, but without the State. A year ago Louisiana might have been compared with a family supporting a great many prodigal sons, a family which suddenly, one blue morning, decided that it was time to reform and tread the straight and narrow; a family which decided that it wanted, again, to become a good risk in the eyes of the Nation.

We adopted a fiscal code. We provided, for the first time, preauditing, budget control, and central purchasing. We are providing $10,000,000 of additional services on less money than was previously spent in a biennium. We went in with a looted treasury and with tremendous deficits. Notwithstanding this we have sold callable bonds for 2.5 percent interest as contrasted with a rate of 5 percent on noncallable bonds issued by the old regime.

All of which shows that democracy and honesty and business management yield dividends, financial as well as spiritual.

And what is the lesson in all this? The answer, it seems to me, is that, after all, democracy is the only, and inevitable, form of government for Americans—whether they be Nebraskans, or New Yorkers, or Louisianians. That, if business, as we know it, is to continue as a free enterprise, it can continue only under a democratic system of government and under democratic philosophy.

If, therefore, the moral virtues which ushered America into existence are to continue; and if free enterprise, in which you

are so vitally interested, is to remain then democracy must be preserved.

Personally, I think these virtues and rights are worth preserving. I think they are worth preserving even to the extent of fighting, and if need be, dying for them. If the example of Louisiana, dark and dire as it has been, has served to teach the people of America the dangers of dictatorship, then our sufferings and our fight will not have been in vain. And perhaps, out of the tyranny and saturnalia, the moral fiber of the Nation will have been strengthened. If so, Louisiana is proud of its contribution.

I welcome you to a State which has met and withstood many disasters, physical and governmental, but which, after each new experience, emerges a better and finer land, populated by a richer and nobler people, the quality of whose moral fiber can never be doubted.

Use of American Convoys

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

LETTER FROM MR. AND MRS. B. W. ASHWORTH, OF LEWISTOWN, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

Congressman JAMES O'CONNOR,
Washington, D. C.:

Again we voice our protest against this country becoming involved in the European war, and against the use of American convoys.

We endorse the aid-to-Britain policy, but we must stay out of the war, but if we use American ships for convoy we will be in the war.

Britain has not paid her last war debt, and she will never pay this one, so why not give her the ships and call them a gift?

If Britain has not the ships to send for American supplies, the practical common sense of the American people will say that these goods should be transported in some way.

The most effective way to do this and minimize the risk, would be to transfer to British ownership, with congressional approval, all vessels which we will use in such convoys, and have them manned by British sailors.

We will probably lose some of the goods and munitions destined for England, and possibly a loss of some of the convoying ships.

If that loss is to be suffered in any event, the chances of our being drawn into the war would be much less if both cargo and the convoy ships were British in ownership, management, and personnel, and our loss in in actually parting with these ships would be nil in comparison with our ultimate gain in not having been drawn into actual war.

Once we put American warships into the business of Atlantic convoying, we take the risk of them not being usuable for our defense.

Yours for keeping out of war.

Respectfully,

Mr. and Mrs B. W. ASHWORTH.

LEWISTOWN, MONT.

Who Is an American?

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1941

Mr. RABAUT. Mr. Speaker, the President of the United States has proclaimed next Sunday, May 18, 1941, as "I Am an American" Day. The very subject of this proclamation suggests the question: Who is an American?

An American is the man who works behind the lathe producing the articles of industry;

He is the man at the desk conducting the financial affairs of the Nation;

The mother in the home teaching her children to love God and country;

The farmer tilling the soil to raise foodstuffs to feed his fellowman;

The politician following the precepts of Washington, Jefferson, and Lincoln;

The doctor, the clergyman, the truck driver, the lawyer, the clerk, the teacher, the stenographer;

The boys and girls in school; the salesman and the carpenter.

These people make up America. They hear strange and conflicting statements over their radios; they read of horrible and heartbreaking incidents abroad; they are bewildered by man's inhumanity to man; and yet they have a feeling of security in this land so blessed by God that its fertile fields, its broad rivers, its great cities, its rolling prairies, its mountain chains, and its natural resources make it the potential haven of all people who love and cherish liberty.

Their joys and sorrows, their desires and apprehensions become the emotions of a free people. Sometimes they tremble at the thought of the great problems that confront them; but then, with courage, they strive the harder to build an ever better land for their posterity. There are exceptions, it is true. But they are so few that their voices of despair are lost in the great prayer that rises from the hearts of their fellow beings. Americans have pride in their past and hope for their future. They are the ones who love America, who support its Constitution, obey its laws, respect its flag, and defend it against all enemies.

They are Americans, and you are one of them. Yes; you who work in the shop or in the office, in the field or in the home, in camps or on the sea, you are one of those persons to whom the whole world looks with envy—for you are an American.

You believe in the United States of America as a government of the people, by the people, and for the people; founded by pioneers who sacrificed their lives and fortunes to found a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable.

Little wonder, then, that I as your representative in your Government, should feel the responsibility of truly reflecting your views. Little wonder that your cares and worries are mine; that I should feel pride in our accomplishments, and concern for our future. Little wonder that I should ever strive to mold the laws of our land to perpetuate those principles of justice, humanity, equality, and freedom, which we love so dearly. This is my glorious right and my bounden duty.

Truly this is a noble mission—I represent you Americans!

Aid to the Blind

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

RESOLUTION BY THE ILLINOIS STATE LEGISLATURE

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recently adopted by the Legislature of the State of Illinois:

House Joint Resolution 29

Whereas the Federal Social Security Board has construed section 1002 (a) and other sections of the Social Security Act as authorizing such Board to veto any State plan for aid to the blind which such Board regards as treating the blind too generously; and

Whereas such Board in construing such sections has insisted that the States do not retain the power under the Social Security Act to determine, by statutory standards, what blind persons are in need and shall be eligible for assistance under any State plan for aid to the blind; and

Whereas the Board has insisted that State plans be so administered that blind recipients will be constantly under the dictation and domination of social workers in the management of their conduct and funds; and

Whereas such Board has insisted that recipients of blind aid under a State plan be not allowed to earn any money in addition to the amount of such aid; and

Whereas all of such positions taken by the Social Security Board are in patent abrogation of the stated purpose of the Social Security Act, namely "to enable the States to make adequate provision" for their blind citizens; therefore, be it

Resolved by the House of Representatives of the Sixty-second General Assembly of the State of Illinois (the Senate concurring herein), That the President and Congress of the United States be memorialized to amend the Social Security Act in such manner as to prohibit the Social Security Board from disapproving any State plan for aid to the blind on the ground that such plan permits and encourages the blind to contribute to their own support, by earnings and income in addition to the State grant, without suffering a corresponding reduction in the amount of the State grant, or on the ground that the property income or other requirements in the State plan are too liberal; and be it further

Resolved, That a copy of this resolution be sent by the secretary of state to the President of the United States and to all of the Members of Congress from the State of Illinois.

Adopted by the house, April 17, 1941.

ELMER J. SCHNACKENBERG,
Speaker of the House of Representatives.
R. R. RANDOLPH,
Clerk of the House of Representatives.

Concurred in by the senate, April 30, 1941.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Anniversary of Rhode Island Declaration of Independence

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

ADDRESSES BY WILLIAM J. CRANE AND JAMES J. HINES

Mr. FORAND. Mr. Speaker, on May 4, last, members of the Rhode Island State Society of Washington and their friends assembled in Statuary Hall, here in the Capitol, to observe the one hundred and sixty-fifth anniversary of the Rhode Island Declaration of Independence.

Mr. William J. Crane, honorary president of the society, and Mr. James J. Hines, the society's historian, delivered impressive addresses and by permission of the House I include them in my remarks so that they may be available for all to read. They follow:

RHODE ISLANDERS ARE REALISTIC

(By William J. Crane, Esq.)

Here in the presence of Roger Williams, so to speak, and on this day we commemorate the historic work of those gallant Rhode Islanders of 165 years ago who in defense of their liberties threw off the shackles of an unwise parent who had forgotten that there were some things in this life more precious than life itself. England, today, in her dark hour understands and appreciates the point of view of those Rhode Islanders, and by her own brave repulse of one of the greatest enemies of democratic principles in the history of the world is in the forefront of the defense of those very principles which were at once the criterion and guide as well as motivating principles of these great Rhode Islanders.

What were the motivating principles of these men—and of their women who so solidly stood by and encouraged them? Simply and ultimately, the practice of the virtues of faith, hope, and charity.

Faith in Almighty God was evidenced not only by their noble appreciation of their need of divine help and guidance in their hour of great distress but in the very selection of their meeting place—the First Baptist Church in the city of Providence. Indeed, the very name of the city of Providence is the constant reminder of the faith of our Rhode Island forebears in Divine Providence. But there was faith in the human, too, faith in each other, a strong, manly, and healthy belief not only in their loyalty to each other but also in the power of their united strength. Above all, faith, undying faith, in the worth and value of their cause.

This in turn was followed by hope, and hope springs from faith. Since their faith was boundless, so, too, was their hope unwavering at all times. Fortitude is the child of hope, and so we may easily understand how and why they unflinchingly went through not only the events of that memorable day but also throughout the remaining and subsequent dark days to the dawn of peace in 1873.

Even all the faith and hope in God and man they possessed was not enough. There still remained charity—love; love of freedom—the God-given right to think, speak, and act in accordance with the true worth and dignity of human beings, an unconsuming love of freedom, with all its implications, so that they were made ready and willing to make any sacrifices necessary for the achievement of their hopes—life, liberty, and the pursuit of happiness as God gave them to understand those terms.

The same evils they faced, we face today. Like them we, too, can overcome them as successfully if we recognize, as they did, the necessity, the absolute necessity, of the return to a proper understanding and appreciation of the fundamental issues involved. I submit that the fundamental issue involved today is whether or not we are to resist the attempted destruction of faith in God and in man. Whether we agree with this or that argument advanced relative to the present world situation today, it seems to me that thinking people all agree that the basic problem for us to solve is whether we believe, with those gallant men and women, that life, liberty, and the pursuit of happiness are so precious that, if need be, we will gladly offer to lay down our lives for them as they did. Strange as it may sound to some ears, there is something worse than evil in the world, and that is to fail to recognize evil as evil and not do something about it.

I realize fully that some may object that I am too serious in discussing these matters, and in such fashion. My reply is that unless we face the present situation realistically and in its fundamentals "it may be later than we think in this country." God grant that our fears in that regard may be utterly groundless.

In no spirit of futility may any American, but especially any Rhode Islander, so conduct himself in these days as to regard the symbol of hope on our State flag as an empty or merely emotional expression of an attitude on the part of those whose memory we commemorate—and bless—today.

Every public official recognizes the inherent right of every American citizen to criticise all public officials in the discharge of their public duties. On the other hand, in justice to those officials and especially in these times, the exercise of that right should be always motivated by good faith. This is no time for petty faultfinding, nagging, or "causing friction just to see the sparks fly." Now, more than ever, it is desirable for all Americans to understand and act upon the realization of the vital distinction between liberty and license.

We must and shall go forward with renewed faith in our great President and Commander in Chief, Franklin Delano Roosevelt, the Congress of the United States, our State governors and legislators—indeed, with perfect faith in and respect for all of our lawfully constituted authorities.

The knowledge that this is the attitude of our American people will enable them all to proceed with the discharge of their weighty duties and obligations in such a way as to prove that, with God's help, we of America are the exemplification and the realization of the hope of the world today.

RHODE ISLAND'S CONTRIBUTION TO AMERICAN DEMOCRACY

(By James J. Hines)

Amid a world of chaos and turmoil we commemorate today a glorious chapter in the history of Rhode Island. Several weeks ago when the gallant peoples of Yugoslavia served notice upon the world that they would not submissively yield to superior force, and in the face of overwhelming odds, dared to challenge the impending aggression of Nazi tyranny, all the world stood aghast. Prime Minister Churchill very eloquently paraphrased the situation as follows: "Yugoslavia has found its soul."

One hundred and sixty-five years ago today Rhode Island "found its soul." Tyranny and oppression were enthroned. The aspirations of a liberty-loving people encountered only the insidious scourge of despotism. The dreams and the sacrifice of the early pilgrims seemed all in vain. Out of the maze of confusion and unrest an all-important question emerged. Would the forward march of democracy be thwarted? Would the impulses of the human spirit be further frustrated?

You will recall that in the year 1636 Roger Williams with his sturdy band of followers abandoned Massachusetts in search of a wider and fuller freedom, a freedom of tolerance which would permit the unrestrained worship of God as conscience dictated. The Rhode Island colony planted the seed of religious liberty on this continent and gave birth to a truly significant principle which was eventually to become enshrined in our Constitution. At this moment there are powerful forces in the world which challenge and deny that fundamental principle. They would destroy it in order to give plausible excuse for their inhumanity, their injustice, and their immorality.

Out of the clash of ideologies which today is taxing the energies of peoples everywhere and sapping at the very foundation of democratic governments, this principle of religious freedom will emerge triumphant. We of Rhode Island will find comfort in the knowledge that our contribution to democracy will serve in these critical days to reinforce the resolution of America to withstand the challenge of the times.

But religious liberty was meaningless in the absence of civil liberty. It would avail us nothing to speak of worshiping God freely according to conscience, knowing that only by the grace of tyrants could this sacred right live and flourish. It remained for Rhode Island once again to accelerate the forward march of democracy by giving expression to another impulse of the human spirit—namely, political liberty. The impulse which motivated the Rhode Island colony on May 4, 1776, to declare its independence of the British Crown is not dead. Within the past month we have seen manifestations of that spirit in other parts of the world. We know that the men and women of Greece and Yugoslavia have given their lives because of it. It is that fact which assures the final triumph of free peoples.

Undoubtedly when the early Pilgrims commenced their perilous journey across the turbulent seas to stake their future in the then unknown America, they were largely actuated by dreams of a utopia wherein the greatest measure of freedom, consistent with the general welfare, would be accorded to all and respected by all. History has recorded that great difficulty was experienced in those early days because many of the new ideas entertained by the colonists were shocking and repulsive to their more conservative brethren. Naturally there were those who revolted at the thought of severing all ties with the motherland and, on the other hand, there were those who felt that here and now was the unique opportunity to lay a foundation for a totally different mode of life.

The clash of ideas on political issues was as intense as it is today on economic issues. Roger Williams was notorious for his radicalism according to the standards of the day. He persisted in advocating the complete separation of church and state until the authorities would tolerate him no longer and ordered his banishment. Thomas Hooker, founder of Connecticut, was likewise denounced as a radical, and he too was compelled to flee the Massachusetts colony. John Winthrop had no faith in democracy, he unceasingly attacked the suggestion as nonsensible and impractical. Not a few of the colonists were uncompromising in their demands that the recognized Church of England become the established church of America. In the southern colonies a landed aristocracy was gradually concentrating wealth in a few of the more privileged families. The backwoodsmen, comprising largely German and Irish populations, were denied equal representation in the so-called representative assemblies. America was seemingly at the crossroads and a vital decision had to be made. Was the feudalism and despotism of the Old World from which our forebears had sought shelter to be perpetuated and inculcated in America, or would untried and distrusted democracy find here in America the vitality and nourishment for life?

How fortunate America has been. Whenever in her dynamic and illustrious history a vital decision had to be made and she appeared to falter on the precipice of indecision, great men of vision and foresight, men who instinctively felt the common touch, sensing the true greatness and significance of America, have come forth to lead her. Roger Williams and Dr. John Clarke, of Rhode Island, were two such men.

It remained for Rhode Island, under the leadership of these stalwart champions, to manifest to the world a practical demonstration of true democracy.

The royal charter issued to the Rhode Island Colony in 1663 by King Charles II has been universally recognized as the most liberal public paper ever promulgated by the British Crown. The principles enunciated in that historic document were mainly the product of the unsparing efforts of Dr. John Clarke, who, after 12 years of failure and disappointment, finally prevailed upon Charles II to acquiesce in extending to Rhode Island this incredibly generous charter of government.

The principles of civil and religious liberty which are set forth in our Constitution had their inception in the Royal Charter of 1663. Of all the achievements of the distinguished Dr. Clarke the authorship and procurement of this historic document was the most significant. From this time forth the Rhode Island Government was imbued with all the powers and prerogatives of a free, democratic republic, and the colony itself became recognized as the freest Commonwealth in principle and practice on the face of the earth.

Bancroft, one of America's foremost historians, said of the Rhode Island Charter of 1663: "Rhode Island was fostered by Charles II with great liberality. This charter of government, establishing a political system which few besides Rhode Islanders themselves then believed to be possible, eventually became the oldest constitutional charter in existence. Nowhere in the world were life, liberty, and property more secure than in Rhode Island."

Thus in only 2 colonies, Rhode Island and Connecticut, do we find from the beginning a belief in the democratic process. But Rhode Island alone was unique in that she singularly exemplified a firm faith in the common man, a faith without which democracy is untenable in theory and imperfect in practice. Incidentally, both Rhode Island and Connecticut owe their foundation to religious bigotry and political despotism so prevalent in Massachusetts at the time.

Is it any wonder then that the colony, already rich in tradition, met the crisis of 1776 with steadfast courage and conviction. The audacity of the deed compels our admiration, for "Little Rhody" has been among the most conservative and most loyal of the colonies. Imagine if you will the momentous decision that was determined and the inevitable retaliation and consequences. But Rhode Island acted alone, for there was no assurance that the others would follow her example. Under the inspiring leadership of Jonathan Arnold, the Rhode Island Assembly gave notice to the world that democracy was not to be the failure its friends had feared, its enemies had hoped, and its prophets had predicted.

In the cause of freedom and independence the Rhode Island Colony invariably took the initiative. As early as 1732, in an official protest against the Sugar Act, she denied the right of Parliament to tax the colony, and was the first to formally proclaim the principle, "no taxation without representation." In the Stamp Act resolution she was the first and only colony to direct her officers to defy the power of Great Britain; first to challenge the royalty in arms by sinking the sloop *Liberty* in 1769 and by burning the schooner *Gaspee* in 1772. Rhode Island was the first colony to urge a congress of colonies and the establishment of a permanent union; first to build a navy of its own, and which, under the command of Commodore Whipple, fired the first cannon on the high seas in defense of American liberty; and first to recommend to Congress the establishment of a continental navy and gave it the first commander in chief, Esek Hopkins.

This, then, is the unique contribution of Rhode Island to the making of America. We have need today of men no less far-sighted than Roger Williams and no less tactful than John Clarke. Great achievements have not all passed into history. A still more glorious future summons to its tasks the finest talents in an effort to solve the problems of our day. Surely we recognized that many of our fellow citizens are at the moment deprived of economic liberty just as our forebears were denied civil and religious liberty many years ago. This fact admittedly presents the most baffling challenge of our generation. It will tax the patience and ingenuity of men and women for many days to come, but ultimately the shackles of economic bondage will be broken. That sprit of action which inspired the gallant Rhode Island Colony on May 4, 1776, still lives in the hearts of Americans. Its inspiration will fortify the less fortunate and enable them eventually to walk with dignity, endowed with the blessings of opportunity and security. And in this battle for economic justice, if I may venture an opinion, Rhode Island, true to her glorious past, will make her contribution and, if necessary, her sacrifice.

War or Peace—It Is Up to the President

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. CHIPERFIELD. Mr. Speaker, the most important issue before the United States today is whether we go to war or remain at peace. You will note that I do not say this decision rests with the American people or the Congress, although the Constitution provides the Congress has the sole power to declare war. In my opinion it is the President of the United States who will determine this issue. Of course, there is nothing that would prevent Hitler from declaring war on us if he chose to do so.

How then did it happen that the President must make this decision rather than the Congress? It is not because the Constitution makes the President the Commander in Chief of our Army and Navy, as other Presidents have had this same power and have never led this country into war until the overwhelming majority of the people and the Congress willed it. I believe it is because the Congress by its own actions has placed this burden upon the President, but only after he and his administration demanded, in the face of most vigorous opposition, that such responsibility be placed in his hands.

Before the war Congress passed the Neutrality Act, which was designed to keep us out of war. As soon as war occurred, the vital parts of this act were repealed and we found ourselves leaving the role of neutrals and entering the role of nonbelligerents. From that day on the Congress has granted to the President war-making powers on numerous occasions, and for all practical purposes, abdicated its right to declare war by the passage of the lend-lease bill, and subsequently the $7,000,000,000 all-out aid to Britain.

While the Congress still retains the nominal power to declare war, yet by placing these vast war-making powers in the hands of the President, he alone can maneuver the armed forces of this country into such a position that war would be inevitable. For example, he could do this by ordering convoys of British shipping or permit our own vessels carrying contraband to enter the war zones.

During the campaign last year both Presidential candidates gave their solemn word that this country was not to be involved in war. Time after time President Roosevelt pledged the American people we should not participate in this world conflict. I quote passages from speeches made by him during the closing days of the 1940 Presidential campaign:

We are arming ourselves not for any purpose of conflict or intervention in foreign disputes. I repeat again that I stand on the platform of our party: We will not participate in foreign wars and will not send our Army, naval or air forces to fight in foreign lands outside of the Americas except in case of attack.

It is for peace that I have labored; and it is for peace that I shall labor all the days of my life.—Philadelphia, October 23, 1940.

In 1935, in the face of growing dangers throughout the world, your Government undertook to eliminate the hazards which in the past had led to war. We made it clear that ships flying the American flag could not carry munitions to a belligerent; and that they must stay out of war zones.—New York City, October 28, 1940.

And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars.—Boston, October 30, 1940.

I am fighting to keep this Nation prosperous and at peace. I am fighting to keep our people out of foreign wars, and to keep foreign conceptions of government out of our own United States.—Brooklyn, November 1, 1940.

The first purpose of our foreign policy is to keep our country out of war.—Cleveland, November 2, 1940.

Mrs. Roosevelt, speaking at a meeting at Los Angeles on April 29, 1941, was asked the following question:

Do you think the President will keep his promise and keep us out of war?

She replied:

He hasn't made any such promise.

If the press is correct in interpreting Mr. Roosevelt's press conference of May 13, she is now hedging on this question, stating that the President had always qualified his statements about keeping America out of war with the phrase "unless we are attacked." That raises the question whether we would be justified in going to war if we deliberately provoked an attack by sending our vessels into dangerous zones or convoy British merchantmen.

Only a few days ago we were told by Capt. James Roosevelt of the United States Marines that we are now in the war except for shooting.

It is indeed alarming when Secretary Knox and Secretary Stimson and former Senator Minton advocate the use of convoys in spite of the fact the President says convoys mean shooting and shooting means war. They advocate the active participation of our Navy in the present conflict apparently with the approval of the President.

All this leaves us in a very confused state of mind. Who is right, those who say we are now in the war or should go into the war immediately; or those who say the President did not promise to keep us out of war? Or can we rely on the solemn pledges of the President himself when he promised he would not take us into war?

I sincerely hope that the President is doing his best to keep us out of war; and I believe so far as this country is concerned it is his sole responsibility whether we go into war or remain at peace, and I sincerely hope he will resist the efforts of the war mongers to push us into war.

As a member of the Foreign Affairs Committee I have consistently opposed all measures that I felt would lead us into war. I am against convoying British vessels by our Navy as I think this would be one of the surest ways to become involved. I shall continue my efforts to keep this country at peace with the whole world.

The confusion of the situation is very well expressed by a pertinent editorial appearing May 12, 1941, in the Quincy Herald Whig (Quincy, Ill.) which I quote:

ROOSEVELT AND HITLER

Whether there will be war or not depends on two men—Roosevelt and Hitler.

There are many conflicting views in Washington as to whither we are headed. Those who have followed Roosevelt's course, from the repeal of the arms embargo in the fall of 1939, through the election campaign, the lease-lend program to aid Britain, the extension of the Atlantic patrol, and other significant moves, have a pretty fair idea of what he is doing. But does the public generally realize it?

Japan, from the best Washington opinion, is not to be considered now. The Japanese do not mean to fight and have no intention of taking the initiative. They are waiting for Roosevelt to make the first move, but they may even then hesitate to carry out any Axis agreements.

The pattern of the last war cannot be followed in this one. Those who have read Walter Millis' book, Road to War, may recall that he stressed the fact in 1917 America followed its dollars invested in Europe, and its financial self-interest. The road today follows a much different course and is more obscured objectively. It is a blurred picture showing the people of this country dragged toward war one day and the next day assured there will be nothing that will take them into the conflict.

There has been a build-up for active naval participation. But President Roosevelt is too careful to let the impression get out that he deceived the people, at least before the public demands that he act. He will probably say "no" to the interventionists who are calling for Hitler's head in an effort to show the country he is a man of peace.

The Nonplaying Dodgers

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. KEOGH. Mr. Speaker, under leave granted me to extend my remarks, I am taking the liberty of including the following editorial which appeared in the New York Times of May 13, 1941. One really must know Brooklyn in order properly to appreciate the Brooklyn baseball fan and it is refreshing that in these days the ardor and loyalty of these fans continue. The editorial is as follows:

THE NONPLAYING DODGERS

Those who do not quite understand Dodger fans must now realize, if they read the exhaustive analysis of these strange folk in our Sunday magazine, that the subject is much more complex than they had supposed. It is plain that the follower of the Flatbush team is not like other men. He knows depths of despair not known to the more phlegmatic. His moods of exaltation are stratospheric. With him baseball is not mere food and drink. It is tobacco, it is love, it is the before and the hereafter; even, when the team is losing, hell.

Anita Brenner's fine and sensitive article on this difficult subject of Why Is a Dodger Fan? suggests some of the difficulties in the way of achieving, in this case, the same smooth and frictionless bonhomie that marks other human contacts. The whole manner of approach to a Dodger fan at, say, the dinner hour must be molded upon the outcome of the afternoon's game. If McPhail's boys have lost, it is wiser and more humane just to ignore a Dodger fan if you wish to remain on speaking terms. If they have won, you have a moral obligation to perform. You must bend outward the sympathetic ear, hear in some detail how it was done and nod understandingly, in wonder and admiration.

It is not quite accurate to say that Dodger fans are merely running the team. They are on the team. We have seen Dodger nonplayers who were still trembling with excitement and a trifle out of breath 2 hours after a hard-fought game at Ebbets Field. They are as short of control as a Dodger pitcher on a bad day on the hill. But they are citizens, taxpayers, subject to the draft. They are born, marry, have children, die, but never grow old—in short have many but not all of the qualities of other mankind. We must bear with them, try as the years roll on to induce them to take things a little easier.

Puerto Rico's Shipping and Sugar Situation

EXTENSION OF REMARKS

OF

HON. BOLIVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

LETTER TO HON. JOHN THOMAS, OF IDAHO

Mr. PAGÁN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith copy of a letter sent by me to the Honorable JOHN THOMAS, United States Senator from Idaho:

MAY 13, 1941.

Hon. JOHN THOMAS,
United States Senator,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR THOMAS: On the floor of the Senate on May 9 you stated that it was unwise for this country to rely on offshore deliveries of sugar. Inasmuch as your remark has been interpreted as applying to Puerto Rico, although that may not have been your intention, I should like to explain the situation with respect to the sugar supply from our Territory.

While it is possible that some areas supplying sugar to the domestic market may encounter difficulty in completing their deliveries, because of interruption to ocean transport, Puerto Rico faces no such handicap. During the World War, when the United States and its Territory Puerto Rico were active belligerents, the island was able to ship every available ton of sugar without difficulty. At that time, Puerto Rico was virtually defenseless.

During the present emergency, however, the island is being converted into the most heavily fortified defense post in this part of the world. Both the Army and the Navy will have strong forces available to repel any attackers. Indeed, Puerto Rico is being relied on to play a vital part, not only in the protection of the immediate Caribbean area, but of the Panama Canal and other distant points.

Thus, there seems little likelihood that shipping from Puerto Rico will be interrupted. Moreover, because of the extensive defense facilities and the large number of troops that would be maintained in Puerto Rico in case of actual warfare, the necessity of maintaining close communication and of transporting the vast amount of supplies needed for the defense forces is adequate assurance that

there will be enough shipping space available to transport sugar to the mainland.

In addition, because of the prominent part that Puerto Rico is destined to play in the defense of this hemisphere, I am sure you will agree that it is imperative to keep the island on an even economic keel. Puerto Rico is forced by natural circumstances to rely almost entirely on sugar for the support of its nearly 2,000,000 people. Any reduction in the amount of sugar produced means a great hardship to the entire Territory. Certainly, it would not be to the interests of the United States to deliberately cause suffering and dissatisfaction among the people of a vital defense area.

Puerto Rico is more than willing to do its part for the national defense and welfare. That is demonstrated by the fact that all but 68 of the 9,600 men needed to fill Puerto Rico's quota under the Selective Service Act had volunteered for active duty before being called for service under the draft. In return, it is only fair to expect that this great country will protect the economic interests of the island's people.

Under the quota system sugar production in Puerto Rico already has been restricted to a greater extent than in any other area supplying the domestic market. Further restrictions, in my opinion, would be unjustified from any viewpoint.

In view of these facts, the people of Puerto Rico ask, and will greatly appreciate, your able help in making sure that there will be no undue handicaps or restrictions placed upon sugar production in the Territory.

Sincerely yours,

BOLIVAR PAGÁN,
Resident Commissioner from Puerto Rico.

Convoying and War

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

LETTER FROM A CONSTITUENT

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the Congress of the United States by one of my constituents:

PORTLAND, OREG., *May 10, 1941.*
The UNITED STATES CONGRESS,
Washington, D. C.:

To this august body of American statesmen, I want to quote to you, during these dark days, the ringing, impressive words, of that great illumined soul and Yankee patriot, Thomas Jefferson:

"I am relying for defense on our own army and our own naval force to protect our coasts and harbors. I am for free commerce with all nations; political connections with none, and little or no diplomatic establishments. I am not for linking ourselves by new treaties with the quarrels of Europe; entering that field to preserve their balance. For us to attempt to reform all Europe and bring them back to principles of morality, and respect for the equal rights of nations, would show us to be only maniacs of another character. The first object of my heart is my own country."

If Thomas Jefferson saw that the first object of his heart was the welfare of his own country, I feel, it's still every American's duty to see that America is their first and last consideration; and that duty, plainfully stated is, that America stay out of another European war; for the place to save our democracy is not in Europe but here at home in America, and to that end I ask you, this august body of American statesmen, that you keep us out of convoying and war, and by so doing, those dynamic words of Thomas Jefferson, live and breathe again, in the land of the free and the home of the brave.

Respectfully yours,

HORACE BUSHNELL POTTS.

Defeat Part-time Waterway Pact—The Kellogg-Briand Pact—Hull's Misconceptions

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIALS FROM THE GAELIC AMERICAN, NEW YORK CITY

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include three timely editorials from the Gaelic American, New York City, on current subjects:

[From the Gaelic American, New York, May 3, 1941]

DEFEAT PART-TIME WATERWAY PACT

Senator BRIDGES, of New Hampshire, speaking in the Senate on March 19, called the St. Lawrence waterway agreement, if carried out, a "broad highway for the invasion of the United States."

One of the main objections to the St. Lawrence waterway is that it would internationalize the Great Lakes and that the big cities of the Middle West would be liable to bombardment by hostile cruisers in case of a war between England and America. Some of our internationalists may say that such a war is unthinkable. War is not unthinkable, and as long as human nature remains what it is, the allies of today may become the enemies of tomorrow.

England invaded America in the War of 1812, sacked Washington, and burned the National Capitol. Senator BRIDGES was right when he warned that the proposed waterway may turn out to be a broad highway for the invasion of the Lake cities.

The St. Lawrence agreement, which has been signed by the Washington and Montreal Governments, is now before Congress. President Roosevelt has made it an emergency measure for defense and expects its prompt passage by the House and Senate.

The proposed agreement follows on the lines of the St. Lawrence Waterway Treaty which was defeated by the United States Senate in 1934. The present agreement is not in the form of a treaty, and a bare majority in both Houses will be sufficient for its passage. A two-thirds vote in the Senate is as improbable now as in 1934, and this obstacle decided the President to depart from the constitutional course of submitting the waterway project in the form of a treaty.

The advocate and spokesman of the canal interests stated that the proposed project would greatly lower the cost of light and power to millions of consumers. Already there is going to waste in this State water power more than sufficient to supply New York and the Eastern States with cheap light and electric power. There is no reason why these facilities should not be availed of by the State. Why wait for the St. Lawrence development when there is so much water power available in New York State? It is extremely doubtful if electric light and power could be had as cheap as it can be produced within the borders of the State of New York. The plea that cheap power from the St. Lawrence waterway would build up many industries now languishing, is farfetched and illogical. There is no business or industry in the country that is handicapped by the high cost of electricity.

This is not the time to spend a fabulous amount of American money on a project that is controlled by a foreign nation. It is not yet proved that the connection of the Great Lakes with the ocean would result in any appreciable decrease in freight charges. Our railways and canals have already reduced their charges to a very reasonable figure, and it has yet to be demonstrated that the proposed canal would lower carrying charges. Undoubtedly the St. Lawrence route would demoralize many railway systems, and throw thousands of employees out of work. Those who have invested their savings in railroad bonds would be reduced to poverty, and this would include widows, orphans, homes, and many religious institutions.

The international canal would also take business away from all our Atlantic seaports. Thousands of men would lose their jobs and result in greatly increasing the total of the unemployed. New York, Boston, Philadelphia, and other cities would be hard hit, and Montreal would become the commercial capital of North America. Our eastern seaport cities would lose trade and population, and taxation, Federal and State, should not be employed to injure great American communities.

The St. Lawrence canal scheme is a hangover from the Hoover administration, which failed miserably in all its negotiations for settling the affairs of the world. It seems strange that President Roosevelt should cling onto policies that brought to their authors failure and ridicule.

It must not be ignored that the St. Lawrence River is frozen for more than 6 months of the year. The ice sets in early, and it is well into the summer before the river is fit for navigation. There is no good American reason for the digging of a part-time canal, and passage of the agreement, signed by the United States and Canadian Governments, should be defeated in both the House and Senate.

[From the Gaelic American, New York, May 3, 1941]

THE KELLOGG-BRIAND PACT

In the Annual Report of the Carnegie Endowment for International Peace the Kellogg-Briand Peace Pact of 1928 is lauded as a great antidote to war. Instead of being an antidote to war the pact of Paris has never functioned. Though ratified by 60 nations, it was never regarded by the world powers as anything more than a well-meaning peace gesture. It did not bind any country and there were no obligations involved. The pact had no teeth and no international body was entrusted with authority to prevent war. Secretary Kellogg was a well-meaning man and his enthusiasm for the pact was wholehearted and sincere. So noncommittal was the panacea for peace that it met with no opposition in the United States Senate. As no obligation was involved, the other countries passed it as a compliment to the United States.

It is stated, however, that neither Kellogg nor Briand was the author of the pact that never functioned and perished at birth.

James Shotwell, of the Carnegie Foundation, was the father of the pact. He forwarded it to Briand, then French Minister of Foreign Affairs, who, in turn, forwarded the document to Secretary Kellogg, who took it up with great enthusiasm and succeeded in having it ratified by the United States Senate without division. It had an equally easy passage in the sixty-odd countries that ratified the pact which was hoped would outlaw war for all time. The best that can be said of it is that it neither promoted peace nor outlawed war.

William Jennings Bryan was also a great peace advocate. While Secretary of State he had peace treaties ratified by the Senate and they were also agreed to by about 60 nations. He was very pleased with his success as a peacemaker, but when the World War started the Bryan peace treaties were thrown on the scrap heap. Bryan's dream of world peace was rudely shattered and he lived to see his own country engaged in the World War.

The Carnegie Endowment for International Peace has been in existence for two generations, yet it has not prevented war or promoted peace. It has branches in many countries, but beyond providing salaries for clerical staffs, it has not prevented wars, which are becoming more frequent and terrible.

What the Carnegie Endowment and other peace societies have overlooked is that world justice must precede world peace. Until the injustices which give rise to wars are removed there can be no peace. To begin with, the conquering nations must give back conquered territory to the rightful owners and they must be willing to confine themselves to the limits of their own respective countries. There is no record that the Carnegie Endowment ever asked the aggressor nations to give back the fruits of their conquests. The pacifists have been barking up the wrong tree.

[From the Gaelic American, New York, May 3, 1941]

HULL'S MISCONCEPTIONS

Secretary Hull's speech, on April 2s, before the American Society of International Law, Washington, is devoted largely to a laudation of England's magnanimity in protecting freedom in her own island home and safeguarding it in other lands, notably the United States. England's enemies, he argues, are aggressors and conquerors who have set out to own and dominate all the countries of the globe.

Has Secretary Hull paused to consider that England for centuries has been herself a ruthless conqueror? She has acquired one-fourth of the earth's land surface by force and fraud. Her bad example has been followed by other nations ambitious to play the imperialist role. In every continent and in every sea she has seized large territories to which she is constantly adding new areas. As a result of the World War she has annexed a million square miles of territory. Hitler will have a long road to travel before he can equal in the extent of his conquests those of the British Empire. Secretary Hull was not happy in his selection of England as a champion of world liberty.

Like all the Anglomaniacs, Secretary Hull has ignored entirely the American Navy, which is now the strongest and best equipped in the world. He certainly knows that no European combination possessing the remnants of the fleets of the present European belligerents could with any hope of success cross the Atlantic to invade the United States or any part of the Americas. He gave no details of a plan of invasion by which from three to four million men could be landed on the Western Hemisphere. All military experts are of the opinion that no such force could be transported across 3,000 miles of the Atlantic with American warships, airplanes, and submarines to bar their way. As a natural barrier the Atlantic Ocean remains a formidable obstacle in spite of all the new engines of warfare of which the airplane, the submarine, and the tank are American inventions.

What Secretary Hull and all the warmongers entirely ignore is that no foreign power or powers have made any attempt or move to interfere with any part of the Western Hemisphere. In spite of the abuse of the Axis nations by Secretary Hull and his colleagues the German and Italian press has pursued a very moderate course under much provocation. It is obvious that the Old World military nations will in the present and the future have their hands too full fighting their own quarrels to be in a position to offer any threat to the Americas. Ample preparation for any contingency is in order for the United States and no patriotic American will grudge the necessary expenditure. We have the men, the resources, and there is no reason why we should not maintain a navy, army, and air force sufficiently imposing to deter any world conqueror from coming to our shores. In 1837, when the population of the United States was only 17,500,000, Lincoln said that a world combination could not gain a foothold in America in a test of a thousand years. The spirit of Lincoln is sadly lacking today in high places.

Gibraltar is very much in the news at the present time. Its possession by England recalls that it was seized from Spain for the purpose of making the Mediterranean an English lake. In spite of her pretense for world peace, as long as she persists in holding Gibraltar and other large areas of the world there is no prospect of amity or justice between the conquerors and the conquered. America should attend to her own internal concerns and let the Old World imperialist powers settle their own differences and fight their own battles. Our experience in the World War was a lesson which should never be forgotten by Americans of this or future generations. The colonial mind is very much in evidence among our most prominent warmongers.

Expenditures for National Defense

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. SANDERS. Mr. Speaker, the Members have asked me as to the States grouped together in the chart used by me in my address the other day on the necessity of decentralizing industry in connection with our national-defense program.

In order to give the information desired, under leave to extend my remarks, I am herewith submitting the grouping of States according to the chart used by me. The figures represent expenditures for national defense by States according to latest statistics available.

States of the Northeast	
Connecticut	$540,632,185
Delaware	26,244,540
Illinois	310,272,928
Indiana	426,244,469
Maine	185,155,355
Massachusetts	846,307,924
Michigan	727,499,932
New Hampshire	97,213,610
New Jersey	1,370,941,064
New York	1,347,344,919
Ohio	420,513,007
Pennsylvania	1,019,260,431
Rhode Island	48,244,301
Vermont	2,574,932
Total	7,368,449,597
States of the Northwest	
California	$1,291,160,061
Idaho	2,009,628
Iowa	57,403,963
Minnesota	19,026,548
Montana	1,489,003
Nebraska	20,966,489
North Dakota	694,708
Oregon	55,389,416
South Dakota	771,219
Washington	511,814,394
Wisconsin	93,638,562
Wyoming	2,718,942
Total	2,057,082,933
States of the Southeast	
Alabama	$174,701,772
Florida	68,536,809
Georgia	50,483,550
Kentucky	42,604,425
Maryland	325,477,982
Mississippi	19,514,512
North Carolina	55,284,957
South Carolina	147,594,776
Tennessee	57,125,686
Virginia	854,703,471
West Virginia	79,898,640
Total	1,875,926,560
States of the Southwest	
Arizona	$6,074,620
Arkansas	7,574,573
Colorado	130,440,511
Kansas	63,538,575
Louisiana	38,015,030
Missouri	342,551,408
New Mexico	11,778,913
Nevada	3,376,189
Oklahoma	23,413,823
Texas	263,205,209
Utah	9,131,226
Total	899,100,077

Federal Gasoline Tax

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

STATEMENT BY THE ALABAMA HIGHWAY USERS CONFERENCE

Mr. GRANT of Alabama. Mr. Speaker, the Alabama Highway Users Conference has recently issued a statement dealing with the question of another increase in the Federal gasoline tax rate. I believe that the membership will find this article of interest. I realize that ways and means must be found to provide the necessary money for our defense, and that the committee handling this important matter has a problem in attempting to work out an equitable tax bill. Gasoline is a necessity, and I feel

sure that the committee will give careful consideration to all other measures before placing an extra tax on the already overburdened gasoline user.

The statement follows:

WOULD ANOTHER INCREASE IN THE FEDERAL GASOLINE TAX RATE BE CONSISTENT WITH SOUND TAX POLICY?

Today the tax burden of the American people stands at a level never before approached in our history as a nation. It is becoming increasingly important, therefore, that our taxes be so imposed that all citizens will bear a fair share of the cost of government proportionate with their ability to pay. More simply, our tax system must be reasonable and equitable.

Yet because certain tax measures in the past have proved to be prolific producers of public revenue, there generally is considerable temptation when more public funds are needed to turn to these established revenue producers as a matter of expedience without much consideration of tax justice. The gasoline tax is such a measure. Public administrators repeatedly have tapped this tax source, generally in accord with accepted tax principles, but often simply to raise revenue without much attention to principles.

ORIGIN OF THE GASOLINE TAX, NOW MOST IMPORTANT STATE TAX

The origin of the gasoline tax may be traced to the development of the principle that the portion of road and street costs properly assignable to motor vehicles should be apportioned among individual motorists according to their relative use of these facilities. Since the consumption of gasoline provided an adequate and practicable measure of vehicular road use, a tax on a gallon of gasoline originally was intended to be, in effect, a toll charge for a road trip of approximately 15 miles for the average passenger car.

The first tax on gasoline was imposed by the State of Oregon in 1919. This original measure proved popular because the rate was low and it generally was accepted as an equitable method of raising revenue for the improvement of roads demanded by car owners. Within 10 years every State and the District of Columbia had adopted this tax. Never before has a tax been accepted so universally in so short a period. Now a State rate ranging from 2 to 7 cents per gallon is being collected from the motorists. In addition, the localities in several States levy their own gasoline taxes.

The gasoline tax is now an established factor in the tax systems of the States. In fact, in most States it constitutes the greatest single source of tax revenue. In 1939 State gasoline taxes yielded $816,000,000, a sum representing 26 percent of total State tax collections, exclusive of pay-roll social-security taxes. No other one tax produced a greater percentage. Two States—Nebraska and Georgia—derived at least 50 percent of their tax revenue from the tax on gasoline.

THE FIRST FEDERAL GASOLINE TAX

In 1932, when the States already had come to rely heavily on the gasoline tax as a source of revenue, the Federal Government also enacted a gasoline tax at a 1-cent per gallon rate. This tax, unlike the State gasoline taxes, which were designed as a special charge against the motorists for the use of the highways, was enacted as a general emergency measure temporarily to provide funds for the relief of our Nation's unemployed.

This first Federal levy on gasoline was scheduled to expire in 1933, for it has never been intended by Congress that this be a permanent tax, but because the emergency still prevailed the tax was extended to 1935. The tax was even collected at a higher rate during the latter half of 1933—1½ cents per gallon—but the rate reverted to 1 cent per gallon at the start of 1934, when other tax revenues were made available by the repeal of the eighteenth amendment. In all, the Federal gasoline tax has been scheduled to expire on four different dates, but each time it has been extended. Congressional leaders had hoped that the economic health of the Nation would be recovered by June 30, 1941, and had scheduled the final expiration of the tax on that date. Unfortunately, late in 1939 conditions overseas gave rise to a greater emergency, the need for national preparedness. It soon became apparent that the initiation of a program of rearmament to insure our national security was a vital necessity.

RATE INCREASED TO HELP FINANCE NATIONAL DEFENSE

Our resulting national-defense preparations have required the expenditure of billions of dollars, and our Federal Government judiciously determined to finance this program, as far as possible, on a pay-as-you-go basis. This decision, of course, has meant the imposition of new taxes and an increase in the rates of taxes already being collected. The Revenue Act of 1940 accordingly adjusted the Federal-tax system to yield approximately $1,000,000,000 annually for the next 5 years.

All prevailing manufacturers' excise taxes, including the tax on gasoline, which were scheduled to expire on June 30, 1941, were extended for another 5-year period until June 30, 1945, and the tax rates increased. The majority of the rate changes represented increases of about 10 percent, but the gasoline tax was increased from 1 cent to 1½ cents per gallon, an increase of 50 percent. This 50-percent increase was the most substantial of all the increases in commodity taxes.

CONSUMERS OF GASOLINE HAVE CONTRIBUTED SUBSTANTIALLY TO FEDERAL GOVERNMENT

Up to the time of the increase in the Federal gasoline tax rate for defense purposes, the consumers of gasoline had paid into the Federal Treasury nearly $1,500,000,000 in taxes on that commodity to aid the Government in a period of distress. With the new one-half cent per gallon increase in rate, these consumers of gasoline have been asked to pay annually $112,000,000 in addition to $224,000,000 in general emergency taxes they had been paying.

That the Federal gasoline tax has been productive of revenue and that those who pay the tax have paid it good-naturedly without complaint no doubt will be remembered when additional Federal funds are needed for general governmental purposes. The temptation will be to use this hard-working horse to death by again increasing the tax on gasoline. But if proper consideration is given to basic facts and principles behind a Federal gasoline-tax increase, the desirability of sound tax policy and tax justice would overwhelm the temptation.

SHOULD THEY BE ASKED TO CONTRIBUTE MORE?

A tax on gasoline is a tax on the consumer of gasoline—whether it be called a manufacturers' excise tax or a retail sales tax, for the tax is included as a cost in the price the consumer must pay. Any proposal to increase the Federal gasoline tax therefore must be considered primarily in terms of the consumer from whose pocket the tax eventually is paid.

Certain questions should be asked about this consumer and true and accurate answers provided: Is he rich? Can he afford the tax? What is his present tax burden? Is the commodity on which he is to pay the tax a luxury he can do without, or a necessity vital to his welfare? Would the proposed tax force him to curtail the use of that commodity? Is the proposed tax a fair measure of responsibility for a share in the cost of government? Is the consumer of gasoline already contributing a fair share toward the cost of government?

MOTORISTS, PRINCIPAL GASOLINE CONSUMERS, NOT A WEALTHY GROUP

Most definitely the motorist of today, the principal consumer of gasoline, is not rich. The day is passed when automobile ownership could be looked upon as an indication of wealth. Since that time there has been a remarkable extension of automobile ownership downward among millions of families with modest or low incomes. This widespread ownership of automobiles in America by families, rich and poor alike, is one of the wonders of the world. Even members of the automobile and allied trades were astounded to learn from a recent official study by the United States Department of Commerce that most of the motorists in this country, more than half of them, have a weekly income of less than $30.

TAXES PAID ON AVERAGE VEHICLE TAKES SUBSTANTIAL PART OF MOTORIST'S INCOME

Official studies also have shown that 10 percent of the typical car-owning family's budget, about $150 per year, is spent for the operation of their automobile. Federal, State, and local special automotive taxes account for more than one-third of this expenditure, an amount equivalent to about two weeks of the family income. One-third of the cost of keeping the family car, therefore, represents tax payments.

During 1939 the special automotive tax burden, averaged per vehicle, was itemized as follows:

State gasoline tax	$26.84
State motor-vehicle fees	13.47
Federal gasoline tax	6.26
Other Federal automotive taxes	4.25
Local automotive taxes	2.85
Total	53.67

With the increase in the Federal automotive tax rates by the Revenue Act of 1940, however, this tax bill for subsequent years will be even greater. The Federal gasoline-tax payment will be increased by 50 percent, or $3.13, and the cost of other automotive taxes will be increased by about 15 percent, making a total increase in annual Federal automotive-tax payments of $3.80.

EXTRA CONTRIBUTIONS EXACTED FROM MOTORISTS BY STATES TO FINANCE GENERAL BUDGET

It is true that the bulk of the motorists' special automotive-tax bill, specifically the State taxes, represents a special charge by the State governments for special services provided for the motorists as a special group. These services, of course, consist of the construction and maintenance of adequate highways. In fact, as already has been indicated, these State taxes were devised for that expressed purpose. Unfortunately, however, the motorists' willingness to pay these special charges for highways has been abused, for some of the States have misused these special funds to finance general nonhighway functions of government which should have been financed through general taxation of all citizens.

In 1939, for example, the States withdrew from these highway funds $182,000,000 to use for general nonhighway purposes. One must remember that the motorist is an average citizen who owns an automobile. Consequently the motorist, as an average citizen, pays all the regular taxes—income taxes, property taxes, sales taxes, and others—for the support of general governmental functions paid by those citizens not owning cars. Actually, therefore, in 1939 the motorists were compelled to pay $182,000,000 more toward the cost of general government than those citizens not owning cars. The motorist, as a result, contributes far more than his fair share of the cost of State government.

FEDERAL AUTOMOTIVE TAXES ARE ALSO EXTRA CONTRIBUTIONS OF MOTORISTS

The Federal automotive taxes were not even intended as highway-user taxes but sim-

ply as general emergency measures. All the revenue from these taxes on automotive chassis, tires, tubes, accessories, lubricating oil, and gasoline always has been, and still is, used to defray general governmental costs. Therefore, these Federal automotive taxes, which at the new rates will yield about $450,000,000 annually, also represent extra contributions on the part of car owners to the Federal General Budget to help finance unemployment relief and national preparedness.

This automotive special tax burden and these extra contributions to the cost of government, it must be remembered, come from the pockets of families whose income in most cases is less than $30 per week. In view of that fact, it must be recognized that these individuals have no unusual ability to pay taxes and that their tax burden already is most substantial.

THESE EXTRA CONTRIBUTIONS NOT BASED ON USE OF A LUXURY

The suggestion might be made that car ownership is a luxury; that if these individuals find their taxes excessive they should dispose of their motor vehicles. Such a suggestion would overlook the fact that the family motorcar is woven closely into the everyday living habits of approximately 70 percent of American families.

In most households transportation by automobile occupies a place among the necessities of life, ranking close after food, clothing, and shelter. A recent study by two of the country's foremost observers of social trends shows automobile use is well-nigh indispensable to modern-day living.

It is true that 20 years ago the man of modest means could not afford to own and operate an automobile. The price of the car itself, its fuel, tires, accessories, and replacement parts was prohibitive. Today the workingman is able to own and operate an automobile; American ingenuity and enterprise have placed within his reach this modern facility for economical transportation.

MOST CARS ON HIGHWAYS ARE CHEAP, SECOND-HAND VEHICLES

Furthermore, the great majority of families possess used cars, for studies show that such cars account for two out of every three cars on the road. More than half of the motorists have never owned a new car, and during a 10-year period sales of used cars have outnumbered the sales of new cars two to one. It is primarily for this reason that the value of the average car in operation today approximates only $200, a value only four times greater than the annual automotive tax bill averaged per motor vehicle.

CARS USED MERELY FOR BUSINESS AND OTHER VITAL PURPOSES

Because families of modest means have been able rapidly to extend their use of the motorcar, greatly improved living conditions have resulted. In the "horse and buggy" days, the absence of adequate and economical transportation made it impossible for a workman to live outside the city or industrial center which was his source of livelihood. Through the use of the automobile, housing congestion has been relieved and living conditions materially improved by the resulting diffusion of population. Life has been made healthier, happier, and safer, even for the resident of industrial communities.

For hundreds of thousands of workingmen and their families, a low-priced, second-hand car is the sole means of recreation. Even with present reduced rates, railroad fares represent a burdensome expenditure for family groups. But the automobile is not primarily an instrument of recreation. According to the United States Public Roads Administration, approximately 62 percent of the passenger-car travel on the highways is strictly for business purposes, family and commercial. Merchants, farmers, and salesmen are but a few of the classes of motor-vehicle operators which depend almost entirely on their vehicles for a livelihood.

UNIVERSAL USE OF AUTOMOBILES, GIVING EMPLOYMENT TO MILLIONS, ITSELF EVIDENCE THAT MOTORCAR NO LONGER IS A LUXURY

The average person usually thinks that such things as electric lights, bathtubs, and telephones are owned much more widely than automobiles. Actually, however, the automobile is the most universal of modern necessities. Most city families enjoy the advantages of bathtubs, electricity, and telephones, but the farm families do not. Although running water and electricity may be luxuries to the farmer, the automobile is not. In fact, automobile ownership is distributed more evenly between the cities and farms than is home ownership, which usually is cited as one of the very foundations of American life.

But the automobile is not only a necessity because of its use. It has also become a necessity in our national economic welfare in that it directly provides a livelihood for some 6,000,000 workers and their families in the automobile and allied industries. It is generally conceded that the automobile industry led the country out of the depressions of 1922 and 1933, and industrialists and economists alike took to the automobile industry again to bring this country prosperous years.

EVIDENCE SHOWS TAXES AFFECT OWNERSHIP AND USE OF AUTOMOBILES

Certainly no suggestion should be made to curtail the use of automobiles. Automobile use should be encouraged instead. But already there is convincing evidence that a heavy automotive tax burden tends to discourage car ownership and operation. A study made in 1938 revealed that population per passenger car in the 12 States having the highest tax per vehicle (averaging $71.14) was 8.1 persons, whereas the population per passenger car in the 12 States with the lowest tax per vehicle (averaging $43.40) was 4.1 persons. In other words, the 12 States with the lowest tax per vehicle had virtually double the passenger-car density on a per capita basis than did the 12 States with the highest tax per vehicle.

An analysis of new-car registrations made 2 years ago revealed that considerably fewer new automobiles have been purchased in those States in which the State gasoline tax has been increased since 1932. In those States which increased their gasoline tax rate new-car registrations showed an average increase of 177 percent between 1932 and 1938, whereas new-car registrations in those States which did not increase their tax rate increased 241 percent. That study concluded that potential purchases of 1,062,817 new cars failed to be effected because of the tax-rate increases.

Still another study has compared gasoline consumption in the 22 States in which gasoline-tax rates were increased during the period 1930 through 1937 with gasoline consumption in the 26 States and the District of Columbia in which no tax increases were made. During that 7-year period, gasoline consumption was found to have increased 35 percent more in those States with no gasoline-tax increases.

STATES RECOGNIZE EFFECT OF TAXES ON AUTOMOBILE USE

Even the States themselves officially have recognized that automotive taxes do affect automobile use. In the last few years about 20 States have changed the motor-vehicle registration date from the end of the calendar year to some other date when the motorist is likely to have more financial leeway than around Christmas and the start of the new year. State officials have testified enthusiastically that the postponement of the registration date has inevitably been followed by a marked increase in the number of motor vehicles in operation during the early months of the year.

There is adequate evidence, therefore, to show that the continued piling of taxes on the operation of motor vehicles definitely tends to discourage automobile ownership and use. Certainly, to disregard this fact would be to deny our Nation the economic, social, and cultural benefits made possible by our extensive use of motor vehicles, and consequently to contradict the traditional American idea of progress.

GASOLINE TAXATION RECOGNIZED AS STATE TAX FIELD

The curtailment of automobile use would have a most unfortunate effect on the fiscal systems of our various States. The degree to which the States rely on the gasoline tax for their public revenues already has been indicated. Ever since the enactment of the first levy on gasoline by the State of Oregon, the gasoline tax has been recognized as a field of taxation rightfully belonging to the States. This principle is recognized and supported not only by students and authorities in the field of public finance, but also by congressional leaders, even those serving on the committees which first recommended the enactment of temporary Federal tax on gasoline. In 1933, the Senate Finance Committee reported to Congress its opinion that the gasoline tax should be reserved for the States.

DANGERS TO STATES OF FEDERAL INVASION OF GASOLINE TAX FIELD

In their reliance upon the gasoline tax as a stable source of revenue, many States have pledged future receipts from this tax for the payment of interest and principal on their outstanding obligations. For the past few years, for example, one State has spent about 60 percent of the total revenue from the gasoline tax to service State and county highway bonds.

The gasoline tax still remains the main source of revenue used by the States to raise revenue to finance the development of their road systems. Curtailment of State revenue from this source would jeopardize the proper maintenance of these road systems to such a degree that public investments in highways totaling billions of dollars would be undermined and threatened.

The dangers of the invasion of the State tax field by the Federal Government have been so apparent and real to the various States that when an increase in the Federal gasoline tax rate was considered in 1933, the legislatures of 6 States adopted memorials requesting Congress to refrain from entering this State tax field and personal protests were filed by the Governors of no less than 11 States. Again, when the reenactment of the Federal gasoline tax was being considered in 1935, similar legislative memorials were adopted by another group of 11 States. In 1936, such memorials were filed by 2 States, in 1937 by 4 States, in 1938 by 1 State, and in 1939 by 2 States. It generally is agreed that only the extreme emergency of national defense restrained the various States from again filing violent protests when the gasoline tax rate was increased to 1½ cents per gallon by the Revenue Act of 1940.

The fact must be remembered that gasoline-tax revenues originally were intended for highway-financing purposes and highways are primarily the responsibility of the States. To quote one authority, "this principle has become so firmly established that Federal or municipal taxation of gasoline definitely is viewed as an encroachment of the States' prerogatives."

CONCLUSION: CHOICE OF GASOLINE TAX AS SOURCE OF ADDITIONAL FEDERAL REVENUE WOULD BE UNFORTUNATE

The foregoing considerations are believed to be sound and important. If the Federal Government finds need for additional revenue for the financing of its general functions, the choice of the gasoline tax as a source of additional revenue would be an unhappy one if for no other reason than the fact that the distance a citizen must travel on the highways is a poor measure of his responsibility for an

additional share of the cost of government—particularly when he already is making extra contributions to the public budget. Certainly the gasoline tax does not weigh properly the relative ability to pay of the various citizens traveling on the highways, for there is little difference in the degree to which an automobile is used by the well-to-do citizen and the citizen not so well to do.

The Time Has Come

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 15 (legislative day of Thursday, May 8), 1941

EDITORIAL FROM THE SHREVEPORT TIMES

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Shreveport (La.) Times of Sunday, May 11, 1941, entitled "The Time Has Come."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Shreveport (La.) Times of May 11, 1941]

THE TIME HAS COME

A fundamental belief, held by almost all Americans, is that there should be complete and impregnable defense of our form of government and our way of living, so that both can be passed on to future generations of Americans.

One so-called class or another may complain about the abuses of capital or labor, or about this or that unjust law, or the ultimate interpretation of laws in the courts. But everyone knows that such complaints do not touch democracy itself.

Freedom of religion, of education, of speech, and of the press—these are the rights which inspire devotion to our form of government and our way of life. These are the privileges for which early Americans shed blood in their Revolution.

Some of our present-day orators do not understand freedom. They call it the great American heritage, a priceless possession of the people. They warn the Nation to stand guard over it, keeping it safe in a world stalked by greedy dictators.

But freedom is not an inanimate thing, like the gold buried in the hills of Kentucky. Freedom is not a commodity, to be put in a treasure vault.

It is a giant force, capable of leading men and women to superhuman triumphs. Unleash its power and it will guard itself against any enemy.

Today, in the gathering storm of world conflict, the full power of freedom should be used, at home and in foreign affairs, to strengthen our Nation.

There should be a moratorium on the issuing of new orders and regulations which hamper rearmament and slow down production. Every American, no matter what his place may be in the country's economic army, should be encouraged to exercise his talents freely in the Nation's behalf.

Citizens busy with their tasks should be freed of the nonessential interferences which normal peacetime bureaucracy imposes. Expansion of reform measures should be stopped. Fetters should be loosened so that all Americans will drive ahead full steam in the good, old-fashioned American way to get the job of national rearmament done at top speed.

The immense power of freedom should be used to defend freedom. If it is not so used, this emergency may become far more grave than any of us now imagine.

Serious questions relating to foreign policy have been before Congress for months. In both the House and Senate the majority has upheld solicitously the rights of a minority opposing the administration's program of aid to Britain. These minority obstructionists, aided by a few prominent citizens possessing no special knowledge of international affairs, have now carried their opposition to the point where it is an aid to Hitler and his associates, the self-proclaimed foes of freedom.

We believe the time has come for the congressional majority to break these minority chains and perform its duty freely and courageously, in accordance with the traditional democratic principle of rule by majority.

The time has come, too, for stronger, sterner national leadership.

Throughout the crisis which began with the crushing of Poland our great President has endeavored to maintain national unity and chart his course according to enlightened public opinion. He now finds himself handicapped by the vociferous minority which is attacking his foreign policy. If he waits for full unity to be displayed, in and out of Congress, his policy will collapse in frustration.

The President, as the leader of a free people, should take decisions into his own hands, casting aside the fetters of minority opposition.

He should inform the dictators and the world that ships of the American Navy and merchant marine—any ships flying the Stars and Stripes—are going to roam the high seas wherever and whenever they please. He should serve notice that the symbol of this free Nation must be respected, and that anyone who does not respect it will encounter the armed might of our country.

Hitler and Mussolini do not own the oceans. American ships should not be kept on leash to soothe the tempers of Europe's madmen. If the Axis cares to challenge the right of the United States to take aid to besieged Britain, let the challenge come.

This would be speaking the language of free Americans as it has been spoken for many decades, not alone by the man on the street but by our Presidents in times of national danger.

Speak out and direct us, Mr. President. You will find that an overwhelming majority of the American people will rise to applaud your courage, happy over the end of uncertainty, and full of confidence in ultimate victory for freedom and democracy.

Hospitals and Their Place in Our Social Scheme

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, May 15 (legislative day of Thursday, May 8), 1941

RADIO ADDRESS BY BROOKS L. VINCENT

Mr. BILBO. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a speech delivered by Hon. Brooks L. Vincent on hospitals and their place in our social scheme.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

May 12 has been designated as National Hospital Day, to be observed throughout the United States—the selection of the date being with propriety chosen to fall on the anniversary of the birth of Florence Nightingale, whose contribution to the development of nursing, and improvements in hospital standards are widely recognized and honored.

As public relations director of the Mississippi State Hospital, I am indebted to WSLI and WJDX for the use of their radio-broadcasting facilities in sharing with like officials throughout America in the commemoration of this significant day.

We who labor in hospitals, whether they be of mental disease nature or of general nature, know eminently well the gigantic contribution that hospitals perform in the physical and mental welfare of free people.

It has been said "Nothing multiplies so much as kindness." Certainly, this seems true in the successful life of hospitals, where kindness must be the chief cornerstone of life's structure.

Hospitals in the United States today face the most serious crisis in their history. Intelligent use of public-relation programs from hospitals may spell the difference between continued growth and stagnation. We seek to promote health through the spreading of knowledge of health principles and of the hospital's role in the advance of medical science. We hospital people do not close our eyes to suffering anywhere—war or no war. Hospitals have been, are, and will be ready for any eventuality, and even should the direct involvement of our country be averted, we must do what we can to relieve misery abroad. Nowhere can the medical professions practice isolation when disaster such as war strikes the people of any land.

Hospitals play a major part in preserving for us our most precious heritage—life itself. Three hundred and sixty-five days in the year hospitals are open, ready to aid the sick in their struggles back to health, to ease the last days of the dying, and to help mothers give birth to their children. Therefore hospitals must fit into its own community the same as a perfectly cut piece in a jig-saw puzzle—a piece that belongs to that particular puzzle and would have to be altered to fit in any other.

Hospitals provide the equipment and skilled personnel which enable the physicians to serve their patients most effectively; they make possible research into the causes of disease and the means for its cure. In the hospitals, our future physicians and nurses are trained.

Hospitals provide humane and scientific treatment and care and the highest degree of individual development for the dependent wards of the State.

Hospitals provide for delinquents such wise conditions of modern education and training as will restore the largest possible portion of them to useful citizenship.

In the case of mental hospitals, it is their aim to promote the study of the cause of dependency and delinquency and mental and moral and physical defects with a view to cure and ultimate prevention.

It is not economy by any stretch of the imagination to keep hospital appropriations low, if in so doing patients cannot be given adequate care and supervision, and overcrowded conditions interfere with hospital care conducive to early cure and improvement with corresponding early release and less expense to the State. For instance, since mental patients cannot be sent to general hospitals, satisfactory provisions of medical and surgical facilities must be made at

the State hospital. The best hope of the Commonwealth for minimum cost in caring for the physically and mentally ill lies in providing adequate facilities that the greatest possible percentage of cures and improvements may result.

If appropriations are too low to permit this, any immediate reduction in expenses is offset many times by increased costs to the State during a following period of time.

The laymen who are called upon to find a hospital for relatives are "somewhat reluctant" in knowing what to look for. Therefore, hospitals must contain modern equipment, fireproof buildings, beautiful gardens, and comfortable surroundings. Personalities influence the patient's recovery.

It requires no demonstration to prove that hospital patients will do better, will be happier, more contented, and will be more likely to improve or possibly recover when they have ample room in which to move about, and may enjoy the benefits and liberties of outdoor life, supplemented with the advantages of good medical care and all the associated activities which are now indispensable in good hospital care.

An ideal institution not only accepts the findings of others but attempts to add to the knowledge which the world has already acquired.

Pray God that Mississippi shall ever continue her leadership in that respect.

Herbert Hoover on Aid to England

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, in spite of the attempts of a small minority throughout the country to stampede President Roosevelt and his administration into convoying vessels into the war zone with our own Navy, under our own flag, the country is rapidly coming around to the viewpoint that these vessels should be transferred to British registry and that the convoying should be done under the British flag.

If the Wall Street element throughout the country is justified in extolling Wendell Willkie and praising that "barefooted boy of the House of Morgan," I trust you will forgive me if I pause to pay my brief tribute to America's No. 1 private citizen, Herbert Clark Hoover, former President of the United States.

I have never been a Hooverite or a Hoovercrat. Mr. Hoover and I have not agreed politically, but he is a great American whose patriotism is unquestioned. He is not a candidate for office and says he never expects to be again.

As I have said before, he is the most intense pro-English, or pro-British of any man who has been President of the United States probably in all the history of this country. He lived in England for many years. Therefore, no one can accuse him of being anti-British or pro-German. He is intensely American.

I hope every one of you will read the speech he made the other night, in which he points out the danger of our getting into this war, and discusses the way to assist Great Britain and at the same time keep out of the war zone and out of the European conflict.

Under permission granted me to extend my remarks I am inserting excerpts from the speech delivered by Mr. Hoover in New York on May 12.

The matter referred to follows:

For the last 6 months I have remained aside from the controversy on whether we should join in this war. I have been waiting to see the progress of our preparedness. I have wanted to see the situation abroad develop more fully. I had believed that the President was earnestly endeavoring to keep his promise to the American people of October 23:

"We will not participate in foreign wars and will not send our Army, Navy, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

In the past 10 days we have had many speeches and much propaganda, the meaning of which is to drive the American people into this war. One who has been honored by his country as a member of America's war council in the last World War and as its Commander in Chief in subsequent troubled years must learn something of the principles of national defense and our setting in the world.

It is, therefore, my duty to speak out of my experience. I hope that by sober discussion of the facts I may contribute something of thought in this most fateful decision.

FAVOR PROVIDING MAXIMUM TOOLS FOR BRITAIN

I do not need to express again my abhorrence of the whole totalitarian movement or its dangers to the world. That there be no misunderstanding, let me state at the outset that I support provision of the maximum tools of war to Britain; that I am convinced we can give this maximum during her next critical months only if we keep out of this war; that putting our Navy into action is joining this war; that the whole European war situation is in transformation; that America is as yet unprepared even for adequate defense; that our people are not united. To go in now is neither wise nor for the interest of either Britain or ourselves. In the anxiety of the moment many do not recognize the facts.

It is now proposed that we should put the American Navy into action. That is a straightforward, understandable proposal which boldly makes clear the meaning of words like convoys or patrols. That is joining in this war, once and for all. From here the steps are automatic. Our Navy must attack German submarines, ships, and planes if it is to be of any use. To make it effective, then, we must expand naval and air bases abroad. We must equip these bases with expeditionary forces. And that is war for long years to come.

There are those who say we are already in this war. That is not true. We are in a position of risk. But war has not been declared between ourselves and the Axis. Diplomatic representatives are still maintained on both sides. Our treaties are still in force. There is no killing of men between us. If this war were ended tomorrow, it would not be necessary for us to make a new peace with Germany.

TIME FOR SOBER APPRAISAL OF FACTS

This is no time for wishful thinking. Upon our decision depends the fate of our Nation. It is the time of all times for a sober and frank appraisal of new facts and new situations.

The first hard fact is the transformation of the character of this war. No one can deny the grim possibility that Hitler may take Suez, Iraq, North Africa, and the Mediterranean. This would not, however, cut the vital lifeline of Britain. It might even release the British Fleet to protect their Atlantic lanes. In any event, Hitler can occupy all of continental Europe.

And from all this area he will get ample food supplies and raw materials for the German people. True, he is blockaded by the British Fleet, but the blockade cannot starve the German people or cut off their vital raw material supplies. It is only the people in the occupied democracies who will starve. Having been disarmed to their very carving knives, they cannot revolt.

A second phase of this transformation is that substantial army fighting seems likely to go into the background for many years. The British armies cannot invade Hitler's Europe. Nor do I believe with all the 6,000,000 men that Hitler commands and his superior air force that he can now cross the Channel to England. To invade Hitler's Europe would require us to prepare 5,000,000 men in addition to the British Army. This time to invade Germany we would need to land them quickly and that might take 40,000,000 tons of ships to carry our Army over the Atlantic. And they might not be able to land even then. It would take 10 years to build those ships. And Hitler could not start toward the United States without equal preparation.

UNDETERMINED WEAPON AGAINST HITLER IS AIR POWER

The undetermined weapon against Hitler is air power. And the character of air war is also being transformed. It is rapidly emerging to be long-range bombing with fighter planes to defend against the bombers. Accurate action in destruction of industrial and military objectives by daylight is no longer possible because of the efficiency of fighter planes on both sides. Manufacture of more and more planes will thus continue on both sides. But so far there is no effective answer to night bombing. It serves mostly to destroy large objectives, the cities and harbors, reducing them to rubble and killing civilians. And in this destruction Hitler has to fly only one-third the distance that the British have to fly to reach his point of attack.

And there is a transformation in the German blockade of England. The long-range bomber is developing as a primary weapon in the attack upon harbors and upon ships. Submarines are today partly scouts, sending word to the air forces. Naval protection of Britain's sea lanes is now subsidiary to air protection.

This moving transformation of the relation of army power, sea power, and air power presents new situations which are not yet clear. They involve many new considerations. They emphasize England's immediate need which I will discuss later on.

SECOND HARD FACT IS HOSTILITY OF JAPAN

The second hard fact we must frankly face is that in the last war Japan was our ally and we had no need to defend the Pacific. But Japan is now openly allied to the Axis. She only awaits a favorable moment to realize her ambitions in Asia. That opportunity comes to her if we go to war in the Atlantic. Even if she does not open war upon us, her action and attitudes will be so potentially dangerous to us that we must instantly strengthen our defenses in the Pacific.

The third of these hard facts that we have to face is our unpreparedness. We have been slow to organize for defense, as is always the case in democracies.

We are not prepared to go to war. Our industry will not be tuned up for another 8 or 10 months to produce enough of the tools of war to equip our own defense and at the same time supply the needs of Britain. We do not have 300,000 men who

are sufficiently equipped with planes, tanks, and guns to meet 300,000 Germans, to say nothing of victory over 5,000,000 of them. We will not even have 1,500,000 men so equipped for probably another 12 months. We have no substantial air force of the type now being used in this war. It is true we have a magnificent Navy, but even that is not yet big enough for the job which it may have to undertake if we join in this war.

WHAT TO DO FROM NOW ON IS QUESTION FOR PRESENT

Our every sympathy, our interest is to assist the heroic defense of England. We have pledged ourselves to give Britain the aid of our factories and our farms.

Her most critical period is right now. It is during the next months. What is the urgent need of England as expressed by her leaders time and again? Plainly she needs bomber planes to guard her sea lanes. She needs bomber planes and fighter planes to offset the attacks upon her cities and her harbors. She needs tanks, munitions, and food. She needs merchant ships to replace her losses. She needs minor naval warships to guard her sea lanes.

If we join this war we must join in earnest. We shall lose it any other way. If we join we must at once increase our Army to 2,000,000 or 5,000,000 men. We would have to use a larger part of our immediate manufactures to supply our own Army. We would have to use a larger part of our air production to defend our own coast cities. We would have at once to increase our protections for the Pacific coast and our island possessions. We would have to use a larger part of our production of fighter and bomber planes for them. We would have to hold merchant ships in reserve to carry troops to protect them. We are not building enough merchant ships now to meet British needs. We would have to use our light naval craft to convoy and protect our own sea lanes, especially in the Pacific.

In net, if we join this war we must use a larger portion of our present scant production for our own equipment and defense. We would have to do this at once. And that means if we join in this war we must give Britain less tools of war during her most critical period.

CAN TAKE MORE RISKS IN GIVING BRITISH AID

If we stay out of this war we can take more risks in parting with our tools of war.

The British have said time and time again, that if we give them the tools they have the manpower to repel invasion; they have the men to man the warships, the merchant ships, and the airplanes.

Today we are confronted with not one problem, but many. What is the constructive American course amid these problems? Is it not clear that we will give less tools to Britain if we join in the war? The solution is not for us to go to war, but to give her every tool that will really aid her, regardless of our own preparedness. There are risks in this course, but it is the least perilous road we can now take. This solution will not please extremists on either side. Common sense and stark truth rarely do, and I am convinced that here lies the road to national unity that is so essential to America at this time.

We must also think other things through. And there are some other very disagreeable questions that must be answered before we take the plunge to war. We cannot refuse to face the facts of the situation when the fate of the Nation is at stake.

We wish to aid Britain, but we must face the fact that if she cannot maintain the independence of the British Isles with the tools and policies I have mentioned, it cannot be maintained by our joining in the war. If we are in the war and should Britain fail, we would be left to carry the war alone. And that war against Nazi-controlled Europe will have to be fought at a distance of 3,000 miles and for year and years.

In that event are we going to blockade Europe? If so, are we going to starve the 40,000,000 people in Great Britain? And how will we bring such a war to a conclusion?

What the course of the American people may be in this conflagration of the world cannot rightly be determined now. We cannot appraise all of the factors. At the present we cannot judge the effect of the transformation going on in this war. But there are some things we can state with assurance.

The Germans need have no momentary satisfaction in our unpreparedness. That will be forthcoming. The potential might of this Nation is the strongest thing in this whole world. If necessary, we can raise and we can eventually equip an army of as many millions of men as we need. We can make more ingenious tools of war and we can operate them better than any nation in the world. That strength is always here in America. It cannot be defeated. I deny that the defense of the United States is dependent upon any other nation.

Right now we need calm thinking. We need reason. We need tolerance. We need to approach these problems with deliberation. Until this picture is more clear it is folly to gamble with the fate of a nation. Strong men do not need to rush. We must not be swept off our feet by the profound depth of our emotions. By no hasty or emotional act must we jeopardize the aid to Britain and the future of America.

MUST NOT FORGET PRICE WE WOULD PAY FOR WAR

Finally we must not forget the price we shall have to pay if we join in this war.

It means the sacrifice of our most precious lives and the hopes of millions of mothers and wives. It means the sacrifice also of our own liberty to a dictatorship of our own, inevitable in total war.

If we go into war, we must pass through post-war bankruptcy. The savings of the people will be lost. The endowments of our universities, colleges, hospitals will be destroyed. And when the day of transformation of war into peace comes the Government will not be able to support the unemployed and the farmers. In this gulf all major industry must be operated by the Government. When we go to the peace table hate will again, as before, sit at that table endeavoring to destroy the hope of any real peace among men. Liberty will not recover on this continent for a generation.

But, if despite all this price, we are compelled to act with our military power, let us be thoroughly prepared. Let us make our determination within the frame of our Constitution by the decision of Congress. And when that decision is made there will be no disunity in America.

The Postponed Speech

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Chicago Tribune:

THE POSTPONED SPEECH

Mr. Roosevelt has again changed his mind about his broadcast to the world. He will not speak at the Pan American Union. Recently, when he was to dedicate the birthplace of Woodrow Wilson, he asked for a radio hook-up. Then the request was withdrawn. All arrangements were made for the world-wide broadcast tonight, and again there was a cancelation.

Mr. Roosevelt evidently is in a quandary. The American people know what he has promised them. They do not know all he has promised the British Government. The people here first heard of his proposed sensational speech from London. There it was said that he would virtually declare a state of war existing but would allow the overt act to come from Germany.

The first confirmation of that report at the White House admitted that the speech might be very sensational. Now that it has not been delivered on two occasions for which preparations have been made, the White House secretariat says that there will be nothing exceptionally startling about it.

Mr. Roosevelt's uncertainties are encouraging to the Americans who think that it is the obligation of their Government to keep their country out of a war in which it would make sacrifices without perceivable consequences beneficial to it or to anyone else.

For a month Mr. Roosevelt has been putting out feelers. He had Mr. Hull, Mr. Knox, Mr. Wickard, and Mr. Stimson say for him what he has hesitated thus far to say for himself. He approved of their speeches but still refrained from making their statements unequivocally his own.

Mr. Hull and Mr. Knox and Mr. Stimson, and then Mr. Willkie, said that the supplies to Great Britain could not go to the bottom of the ocean if America was to be saved, and Mr. Stimson went all the way across the Atlantic by saying that the American Navy was ready for service and that the flower of young American young manhood on the ships was filled with the highest patriotic spirit.

Stimson, as Secretary of War, committed the administration in downright fashion to a naval war with Germany. His words could mean nothing less than that and it was apparent that Mr. Roosevelt had put him out in front to speak for the administration.

The British Government undoubtedly has been led to rely on full American participation. The personal representatives Mr. Roosevelt has sent abroad, including Mr. Hopkins and Mr. Willkie, and including Army and Navy men, have confided his intentions. The American people are compelled to suspect that these commitments have been without reservations and that they have led the British Government to believe that as soon as American opinion can be brought to accept the consequences the United States will enter the war.

Thus Mr. Roosevelt may be confronted with promises made abroad and promises made here, promises to a nation at war and promises to a nation not at war, which are contradictory and irreconcilable. He cannot keep the promise that "your boys are not going to be sent into any foreign wars" and send the "flower of young American manhood" to fight off German raiders. He cannot stick by his assertion that convoying means shooting and shooting means war and then send the ships on convoy duty and deny that he is going to war.

Mr. Roosevelt has not succeeded in bringing this Nation around to his way of thinking or his proposals for action.

His hesitation is a sign that he doesn't see his way clear to go to war.

Hoover's Hard Facts

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM THE BINGHAMTON (N. Y.) SUN

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Binghamton (N. Y.) Sun of May 13, 1941:

[From the Binghamton (N. Y.) Sun of May 13, 1941]

HOOVER'S "HARD FACTS"

Hitler may take Suez, Iraq, North Africa, and the Mediterranean, but he can't cross the English Channel.

That is the opinion of former President Herbert Hoover as broadcast to the Nation, and it is an opinion shared by many other well-informed Americans.

When Herbert Hoover speaks we at least have the assurance his words are well considered, thoughtful, and based on long study and close observation. He has this advantage of men like Lindbergh who, right or wrong, are saying the same things over and over again, making tours of the country, speaking whenever an audience can be gathered together to listen to them. Mr. Hoover broke a silence of 6 months on Sunday night. He presented some new arguments.

Presenting the probable loss to the British of Suez and a German sweep of the Mediterranean, including Gibraltar, as one of the "hard facts" this Nation must face, the former President subscribes—or succumbs, if you wish—not to a doctrine of appeasement but to one of caution. Lindbergh subscribes to both, and there is another marked difference. The former wants us to make our aid to Britain effective. The latter wants us to quit, devoting all of our productive energies to our own defense. One takes the position that Britain is doomed. The other points a way to victory.

They both agree, however, that this Nation is divided. And they are in accord in their statements that we are not yet ready for war and won't be for some time. And there is no doubt in the minds of Hoover, Lindbergh, or any other thoughtful man, that if the Washington administration follows its present trend and uses our warships to convoy British ships we will be in the war from the day the first convoy sails.

What if Britain loses her last strongholds in Europe and in North Africa? She will still be unbeaten if she retains the British Isles and she will still be mistress of the world's greatest empire. She would still be able to wage war indefinitely and may eventually recover everything she stands to lose, and more.

Britain could clean up her own backyard, keep Atlantic lanes open, and protect her islands if she concentrated on this task alone. Her Mediterranean fleet, added to her might in the Atlantic, would be more than enough to insure delivery of everything she needs, including munitions, oil, and food from this side and without any help from our warships. She would thus make doubly sure that no invasion attempt will ever be made. That is her own problem, her job, and we are doing her no favor in holding out hope of active participation if we don't intend to go through with it.

Our industry, Mr. Hoover said, will not be tuned up to produce tools to equip our own defense and supply at the same time the needs of Britain for another 8 or 10 months. We haven't today sufficient equipment to meet 300,000 Germans, let alone 5,000,000 of them. A full year will be needed before we have a million and a half men backed by tools of war comparable to any Nazi division. And it would take 10 years, Mr. Hoover adds, to prepare the armies, build the ships, and make other necessary preparations before we could hope to carry the war to Hitler.

Likewise, Hitler would need the same period of time, 10 years at least, to get ready to bring the war to America. In 10 years a lot of things can happen to Hitler, Stalin, Mussolini, and Matsuoka.

Regulations for Radio Broadcasting

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

LETTER FROM A CONSTITUENT

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

KENMORE, N. Y., *May 8, 1941.*
Hon. WALTER G. ANDREWS,
House of Representatives,
Washington, D. C.

DEAR SIR: Same as a good many other citizens, the writer of this letter is greatly disturbed over the action of the Federal Communications Commission as shown by the new regulations for radio broadcasting. These regulations appear destructive, rather than constructive, insofar as chopping up a good chain and substituting random links here and there does not improve a chain. And it does appear that we get in this case, as individuals, the most in service from an efficiently operated and coordinated chain system. I believe that, in general, we have no good cause for complaint against the present broadcasting set-up, and certainly no reason for dismembering it.

It does seem as though the F. C. C. has taken upon itself the right to do things contrary to the best interests of the country at large, and just when we should get started to concentrate on fighting an outside enemy they undertake the job of undermining our inner structure. This, therefore, is written in the hope that through the efforts of yourself and other legislators this trend can be stopped very quickly and definitely so that our defense effort will not be made ineffective by our having to glance back to see what some would-be little and big dictators are cooking up behind us.

Your active interest in this matter and appropriate action, I am sure, will be appreciated at home.

Cordially yours,

OSCAR I. STRUVE.

For the Distributor

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

ADDRESS BY F. PEAVEY HEFFELFINGER

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of F. Peavey Heffelfinger:

The chamber of commerce requested that I tell you here today some of the adjustment problems faced by a distributor. I shall confine myself to adjustment problems of the so-called grain trade wherein my experience lies.

The machinery for the distribution of grain between the producer and the consumer is frequently affected by national farm legislation. We in the grain trade become concerned with agricultural legislation when it touches upon the function of grain marketing. We strongly favor any sensible plan which offers to give the farmer economic equality; we strongly oppose legislative hocuspocus which promises only to confuse the farmer or increase his marketing costs.

In our trade there was neither official nor widespread personal opposition to the passage of the Agricultural Adjustment Act of 1938. Our trade is close to agriculture and for many years we have recognized the serious problems that farmers must face. We studied the proposed Agricultural Adjustment Act and found nothing in it which expressly authorized the crippling or destruction of the grain-trade machinery. We knew we would be forced to make adjustments under the loan program, but we expected that impartial administration would seek the greatest advantage to the farmer with the least harm to necessary marketing machinery. In brief, we felt that the Congress had written this act for agriculture, but not against business.

However, under the administration of this act, real distress has been brought to certain branches of the trade so that now, more than ever before, their problem of adjustment has become a problem of preventing wide-spread disruption. Not all, but some of these problems have come through arbitrary administrative policies and decisions, and not from express orders of the Congress. Even some legislators, talking with us in the field, have expressed amazement at the direction of some of these administrative policies.

Insofar as I am able, I want to cite some specific problems of adjustment in our trade, using for illustration these four divisions:

1. The futures markets.
2. Cash grain commission receivers.
3. Warehousemen.
4. Processors and merchandisers.

Let me begin with futures marketing. At about the time of the Civil War, the increasing distance from surplus grain producing areas to centers of population forced the creation of a future-delivery system which could give time-and-place value to grain. Futures trading made possible a system of hedging grain, whereby country elevators, terminal warehousemen, merchandisers, and processors could make forward commitments without excessive risk of price changes. By

reducing risk in this manner, hedging greatly lowered the cost of distributing grain, and has been of distinct benefit to both producer and consumer. The futures market reflects public opinion as to grain values, striking a balance between buyers and sellers. It merely registers the price levels of sales and purchases. Condemnation of futures marketing is like condemnation of a thermometer that registers temperature without itself being responsible for it.

Futures marketing has sometimes been investigated under the suspicion or charge that it affects the farmers' price unfavorably. Perhaps the most comprehensive investigation was the one made in Canada a few years ago by the Canadian Royal Commission, headed by the late Sir Josiah Stamp. The Canadian Privy Council, answering complaints from some western grain producers, ordered the commission to investigate as follows: "To inquire and report what effect, if any, the dealing in grain futures has upon the prices received by the producers." The commission made a long and careful study, hearing scores of witnesses. They made a long and detailed report, of which they gave out this summary: "In brief, our answer to the question submitted is that in addition to the benefits reflected to the producer in furnishing a system of insurance for the handling of his grains, and in providing an ever-ready and convenient means for marketing the same, futures trading, even with its disadvantages of numerous minor price fluctuations, is of distinct benefit to the producer in the price which he receives."

The United States has built up an efficient grain futures marketing system which gives exactly these same benefits to our producers. But recently, as our Government has increasingly taken over the functions of the speculator-investor in grain, our futures markets have seriously declined in volume. The Commodity Credit Corporation, by making loans at levels above market prices, has been forced to take possession of large supplies of grain in settlement of the loans, and large surpluses have piled up in the Ever-Normal Granary. Thus, the Government accepts responsibility for potential losses, and becomes the chief speculator in future values. Futures trading has rapidly diminished until in 1940 the volume of trading on the Chicago Board of Trade was less than half of the volume traded in 1937, the year before the act became effective. During the crop movement of 1939, at a period when the hedging volume normally would have increased to its peak, there was little change; grain that formerly had been hedged by dealers and processors was now going under the loan and not into trade channels.

The Government loan sets a minimum price or floor; willingness of the Government to sell at that price plus accrued charges sets a virtual ceiling, leaving a narrow range within which the farmers' market price is caged. As the loan level is raised, more grain tends to go under the loan and into Government hands, until the Government can control the volume and freeze the price. As a result, the interest of speculator-investors has diminished until our futures marketing system faces some critical problems of adjustment.

This brings forward the similar adjustment problems of the second division of our trade, the cash grain commission receivers. The Government agencies have announced that they will not use the services of these commission merchants in moving Government-owned corn from country points to terminal storage. Remember, I am not talking of farmer-owned corn, but of Government-owned corn. In practice they do not use the commission man on ordering wheat into store, either. Through petitions starting more than 1 year ago, and lately through formal hearings in Washington, D. C., the commission men advanced the reasons why they should be employed in the movement of this Government-owned grain and thus be permitted to survive through the emergency. In the report which declined use of commission men's services by the Government, the Government did not question nor dispute any of the reasons or claims advanced by the commission men. Rather, they declined to use the firms, both cooperative and private firms, solely on the basis of figures which indicated that they could handle this work through Government offices in the field at less than the reduced rate offered by commission men.

Here is a new and amazing policy adopted by an agency of our Government: That, without taxes, without wage-and-hour restrictions on employees, without the usual commercial costs and controls which business must bear, it proposes to take over the functions of an established business if it can show lower operating costs. The situation that the commission men face here is in contrast to the situation in neighboring Canada where their wheat board, a governmental body, uses the services of commission men just as it utilizes the services of its entire grain trade in its desire to prevent serious economic maladjustment.

In passing, I mention another set-back the commission men have received. The Wage and Hour Division excluded commission merchants from the seasonal exemptions allowed under the act to the industry engaged in storing grain. While men in the grain trade thoroughly understand the actual and important part taken by commission men in getting farmers' grain into storage position for a loan, the Government excluded them from the partial exemption upon a purely legalistic interpretation of the storage operation. So commission merchants see their volume diminishing as more grain moves through Government grain offices and at the same time must meet rapidly rising costs. Naturally, the number of commission firms is decreasing, and those that remain are working against unfair odds.

A third grain-trade group, the warehousemen, have a different kind of adjustment problems. Large surpluses piled up under the ever-normal granary have naturally demanded a large additional amount of storage space. In fact, large grain crops this year could tax the sufficiency of storage facilities, in spite of the fact that both cooperative and private facilities are being expanded to meet the Government's needs. So temporarily at least we have the prospect of full patronage.

The Government's surplus grain is stored and handled by our warehousemen under a uniform storage agreement, the terms of which were written by Government agencies after conferences with the cooperative and private warehouse trade. The rates are lower than commercial rates, and the contract terms do not recognize the warehouseman's need for a complete cut-off, or termination-of-storage date. With the risk of employing trade terms without defining them, let me briefly explain this important point. The Government pays storage charges for only 6 or 7 months each year, the remainder of the year being free time. If this period of free time coincides with the time of crop movement, and wheat left in the elevator is removed from storage after the annual grain crop is moved, the warehouseman could be left without access to a volume of storage for an entire year We consider it an unfair hazard to demand of the warehouseman, but as long as the Government agencies have control of so large a volume of grain they can virtually dictate contract terms.

I am going to mention steel bins here, but to mention steel bins is to touch a sore spot in the warehouse trade. I speak advisedly because, at a time when the Government was filling its steel bins with some 70,000,000 bushels of corn, I had 2 empty terminal warehouses boarded up in Minneapolis and no employees at work in them except watchmen. The Government's first policy was to use steel bins for corn where country-elevator space was not available, and now even the country elevator operators are beginning to wonder what may happen in some given year when the Government has only enough corn to fill either the country elevators or the steel bins, but not both. Will they use the steel bins before they use the space available in country cooperative and private elevators? Under any normal conditions there is ample storage space for grain in the United States, well over a billion bushels of space. Government steel bins have added about 125,000,000 bushels of additional space recently, and now cooperative and private warehousemen are expanding this space further to meet the storage needs of the Government and the producers. In a conference here in February warehousemen offered to do all in their ability to meet the storage requirements of the Government if the Government agencies, in turn, would make certain minimum commitments for the use of the space, and at rates at least not lower than those in the present Government's contract. The Government would not give the full and necessary assurances asked but evidenced a willingness to use commercial space where available and where needed by them at rates to be maintained at least 1 year.

In a few instances I have mentioned the manner in which cooperative and private grain groups have worked together on their common problems of adjustment under the present farm legislation. Throughout most areas, and in most of the functions of grain marketing, cooperative and private interest have been in harmony. But like most other trades, we have had points of difference. Private grain interests have objected when Government agencies gave excessive favors to the cooperatives, through volume of either storage or merchandising. We have objected also to schemes under which existing country-grain facilities have been duplicated or crowded out by cooperative groups entirely financed by loans from Farm Security Administration under the guise of rehabilitation. But I am willing to admit there that this is not the policy of all farm groups or of all cooperative groups; we concede that many farm leaders have opposed this unwise use of taxpayers' funds to force the growth of the cooperatives.

The adjustment problems of millers, flax crushers, malsters, and other processors and merchandisers can be mentioned only briefly here. But I do point out that these industries are vitally concerted, because they store grain, use the futures markets, and hold memberships upon our leading exchanges. They cut their risks by using the futures markets, and can make forward sales at narrow margins for that reason. They would have a most serious problem if the futures markets were forced to close. The loan program has made market differentials necessary, and whenever these arbitrary differentials have changed the competitive position of the processors in any area adjustment problems are forced upon them. The loan program has sometimes limited the amount of grain available for processing in some areas at levels competitive with other processors in other areas.

These, then, have been some of the adjustment problems in our trade in recent months. They are repeated here, not because we wished to make a catalog of our complaints, but because the chamber of commerce asked that they be outlined for you. They are the problems of a trade close to agriculture and keenly conscious of the

economic inequalities in agriculture. Of course, we endorse the principle of full economic equality for agriculture; to deny it would be to deny the essentials of democracy.

As Americans we would oppose measures aimed toward the harm or destruction of agriculture; at the same time we believe that most farmers oppose any scheme openly aimed toward the destruction of their essential grain-marketing machinery. Some legislators, while considering the farm problem, quickly realize how many are the farmers, and how few are the grain dealers. Clearly we are another minority, and minorities in these days seem to have lost some of the protections inherent in our early philosophy of democratic government.

Our trade will continue to make adjustments as best it can to meet the long-continued emergency. We must continue in our belief that honest competition in business is desirable, and that government monopoly is undesirable. We will hold our costs as low as we can, and as low as taxes during the defense emergency, and the increasing costs of that emergency will permit. We will work willingly and steadfastly with any farmers, or groups of farmers, as long as they do not seek the replacement of a proven and efficient grain-marketing machinery by something which experience has proven uneconomic.

Unhesitatingly, we say that we have the duty, as well as the right, to stand for and protect the simple principle that private business must exist if our chosen system of government is to exist. Unhesitatingly we accept the responsibility of efficient operation and fair business dealing. We want to build and maintain the kind of business which we can honestly recommend to our sons and grandsons as truly valuable to society, and as typically American.

Unnecessary, Unjustified, Un-American Strikes in Defense Industries Must Stop

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. PLUMLEY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I wish to include a letter which I have received and the reply I have made thereto.

The letter I have had from William D. Ross, president of the Barre branch, Granite Cutters International Association of America, reads as follows:

BARRE BRANCH, GRANITE CUTTERS' INTERNATIONAL ASSOCIATION OF AMERICA,
Barre, Vt., April 29, 1941.

Mr. CHARLES A. PLUMLEY,
House Office Building,
Washington, D. C.

DEAR SIR: In a report released by you to the Associated Press on April 3, you were credited as stating that the Vermont Federation of Labor had notified you of its approval of your demand of immediate congressional action to curb defense strikes.

Carmi G. Comings, president of the State organization, notified you to this effect. The Barre Branch of the Granite Cutters' International Association want to point out for your information and for the information of the public that Mr. Comings has no authority to speak for the executive council of the Vermont Federation of Labor and on April 3 he spoke as an individual member of the council and not for the council.

Our organization is affiliated with the Vermont Federation of Labor. We are for democracy in the affairs of the State and Nation and also in our trade-union movement. We do not grant nor recognize the right of any one man to indirectly place our union on record on any question of importance. We reserve the right to decide our stand on the important issues of the day in our own meetings by and through the democratic processes of our union.

We do not subscribe to dictatorship in world affairs or in the affairs of our union.

We reject Mr. Comings' statement of April 3. The Barre branch of the Granite Cutters' International Association in its meeting on Saturday, April 26, was unanimous in its condemnation of the unauthorized action taken by Mr. Comings and equally unanimous in its opposition to any and all legislation which tends to curb the rights of labor to strike in defense or nondefense industries.

Very truly yours,

BARRE BRANCH, GRANITE CUTTERS' INTERNATIONAL ASSOCIATION,
By WILLIAM D. ROSS, *President.*
SIDNEY EDWARDS, *Secretary.*

My reply to Mr. Ross' letter is as follows:

MAY 13, 1941.

Mr. WILLIAM D. ROSS,
President, Barre Branch, Granite Cutters' International Association,
Barre, Vt.

DEAR PRESIDENT ROSS: I have your letter of April 29 with respect to the communication I received from Mr. Comings, of the Vermont Federation of Labor, in regard to my statement concerning the strikes in defense industries. I have nothing to retract.

I do not care to enter into any controversy with you concerning Mr. Comings' authority. He is perfectly competent to take care of himself. What is bothering me is who is going to take care of the American people if such strikes are permitted to continue.

However, I would like to take advantage of this opportunity to make my position perfectly clear, although in the minds of most people, as reflected and evidenced by correspondence and conferences, I think I have made it plain, and it is understood by those who have taken time to study the strike situation.

It is realized by most people that wages and working conditions are not the real issues involved in these strikes in defense industries. This fact has been evidenced too many times to permit denial or to require further proof. Those who do not know this to be true should be advised that real subversive, un-American motives underlie, and are behind these strikes in defense industries. What is more, these underlying motives and subversive interests threaten us continuously. They never sleep. They are even worse than the strikes; they delay and hamper, and in some cases destroy our efforts at national defense.

I suppose you know that the total number of man-days lost as a result of strikes in the first 3 months of this year were more than three times as great as for the same period of 1940. That is a startling figure, but authoritative figures which I have before me show that 3,022,918 man-days were lost in January, February, and March of this year. Of this total over a million and a half man-days—or, to be exact, 1,578,000 man-days—were lost in defense industries.

To get right down to brass tacks, deliberate crippling of defense action is close to treason, for it aids and comforts our enemies in time of war.

The story for the next 3 months will be worse if the proposed strikes in defense industries and the strikes now in operation continue and are effective.

In the Sunday newspapers there were listed strikes in 11 shipyards working on Navy contracts amounting to $500,000,000; a strike affecting an $11,000,000 order in the bag-loading plant at Pulaski, Va., which in turn affects the $44,000,000 Hercules powder plant near Radford, Va.; a strike at the Boston Navy Yard involving $30,000,000 worth of work; a strike in New Mexico involving $9,000,000. These are the amounts given.

In addition, 6,000 workers were to strike in the Chrysler Corporation in Detroit; a strike is threatened in the Brotherhood of Railway and Steamship Clerks, freight handlers, express and station employees, and 4 midwestern railroads; 160,000 General Motors workers are contemplating striking; the C. I. O. has called a strike in the United Engineering & Foundry Co. at Vandergrift, Pa. Thousands of workers were ordered on strike in 60 California canneries, and a strike is in the making at the Murphy Body Corporation.

No doubt there are many others that are not listed here, but when one stops to contemplate the ramifications of these strikes he knows that at least $594,000,000 of our war orders will be affected as outlined above, with the possibility of the strikes affecting some $5,000,000,000.

These strikes must stop.

With all the provisions that have been made for the avoidance of strikes and for the protection of those who claim to be aggrieved, there is no occasion for a strike. In my opinion, there is no half-way business about this situation. You are either for America or against it. To strike in a defense industry and thereby to interfere with the safety of the people and the national defense is un-American.

In nearly every instance those who have instituted or initiated these strikes do not have the interest of the employee at heart. They are motivated purely by hope of selfish gain. They are Communists and racketeers who proceed for pay and without regard to whether or not they destroy our country.

The strikes for the most part are called at strategic places, selected by foreign advisers, where the most damage can be done to us and where our defense program can be most seriously delayed or affected. The racketeers and traitors directed from abroad pick for their sabotage the shipyards, the power plants, coal mines, airplane factories, machine shops, and other vital industries.

These are the facts. They cannot be lightly laughed off, arrogantly denied, or disproved.

In my opinion, if this thing goes far enough—and it has gone far enough already, as I see it—the plants will be commandeered and operated under Government supervision. Labor will be regimented and industry mobilized. One does not have to be even smart to sense that this is the road down which we are traveling. One must be blind who cannot see it.

National defense and the public safety are involved in these strikes affecting defense industries. Make no mistake.

The right to strike is not the issue at all.

I reassert and reaffirm the Coolidge doctrine that "there is no right to strike against the public safety by anybody, anywhere, any time."

The national safety is paramount. The security of the country, the welfare of our people, the protection of our homes, the

preservation of opportunity for our children—in short, the national defense—transcends every interest and every privilege of industry and labor at this time. No arbitrary attitude of self-seeking or greed on the part of either employer or employee, or both, should be permitted or tolerated or allowed to block the attempts and the determination of the American people to defend themselves.

It is high time that the people should realize the facts. They must be aroused to the seriousness of the situation and the insidiousness of the danger which lurks in these strikes in defense industries, for they threaten our very existence as individuals and involve the life of the Nation.

Legal methods for arriving at a settlement of all differences and for the arbitrament of all controversies, affording ample and complete protection for all the rights of everybody, have been provided and are accessible during the present emergency.

Unnecessary, unjustified, un-American strikes in defense industries must stop.

Yours very truly,

CHARLES A. PLUMLEY, *M. C.*

Convoying by United States Naval Vessels

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

RESOLUTION OF THE SARSFIELD SOCIAL CLUB OF BUTTE, MONT., AND THE PHIL SHERIDAN CLUB OF ANACONDA, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

BUTTE, MONT., *May 5, 1941.*

FRANKLIN D. ROOSEVELT,
President of the United States,
White House, Washington, D. C.

HONORABLE SIR: At a joint meeting of the Sarsfield Social Club of Butte and the Phil Sheridan Club of Anaconda, held on April 26, 1941, the following resolutions were unanimously adopted.

"Whereas it has been intimated that the United States Fleet is to be used to convoy merchant ships carrying munitions of war to certain belligerent countries now at war in Europe and Africa; and

"Whereas such merchant ships with their convoys must necessarily travel in enemy waters, which are infested with submarines and sunken mines and thus exposes them to the danger of being destroyed, which will inevitably lead this country into the European war: Therefore be it

"*Resolved*, That we, the officers and members of the Sarsfield Social Club of Butte and the Phil Sheridan Club of Anaconda, in joint meeting assembled, do hereby go on record as being unalterably opposed to the use of the United States Fleet as a convoy for any merchant ships engaged in carrying munitions of war to any European or African port; and be it

"*Resolved*, That we petition His Excellency, Franklin D. Roosevelt, President of the United States, to be ever mindful of his promises to the electorate during the recent campaign for reelection that no American boy would ever be sent across the Atlantic to fight on foreign soil; and be it further

"*Resolved*, That a copy of these resolutions be forwarded to Franklin D. Roosevelt, President of the United States; a copy to Cordell Hull, Secretary of State; a copy to Senators B. K. Wheeler and James E. Murray; a copy to Congressman James F. O'Connor and to Congresswoman Jeannette Rankin; and a copy spread upon the minutes of this meeting."

Committee:

M. J. MULLANE,
M. J. HARTNETT,
PATRICK MCGIVERN,
Butte.
MICHAEL LACEY,
THOMAS ASTEL,
MICHAEL SHEARIN,
Anaconda.

Implementing the Philippine Export-Control Law

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

Mr. CRAWFORD. Mr. Speaker, in a few days the House will consider a measure, Senate Joint Resolution 76, unanimously approved by the Military Affairs Committee, making applicable the export-control law—section 6 of the act of Congress of July 2, 1940—to the Philippines and other possessions and Territories.

This is designed to stop the shipments of certain critical and essential materials which are moving from the Philippines to certain foreign countries, particularly Japan and Russia. Shipments to Russia, through the port of Vladivostok, on the Pacific less than 500 miles from Japan, may easily find their way to Central Europe by way of the Trans-Siberian Railway, which connects with Polish and German railroads.

I favor the resolution. I hope it will receive nonpartisan consideration. It will implement and strengthen our national-defense scheme.

On March 31 last—see page 2759 of CONGRESSIONAL RECORD—and a few days before that I took the floor and discussed the importance of having an export-control law for the Philippines to plug the hole through which banned materials have been moving to certain foreign countries and also to prevent the Philippines from becoming a base for the reexportation of those materials. I supported my discussion with extensive quotations from memoranda prepared by Mr. Vicente Villamin, Filipino economist, covering the movements of goods between the Philippines, Japan, Russia, and the United States.

As a member of the House Committee on Insular Affairs, I am aware that our definite policy is to let the Filipinos have local autonomy and self-rule and to legislate for themselves. When a Philippine legislation has to do with foreign countries it will have to be approved by the President of the United States before going into effect. I had hoped that this process would be followed in the present case, but, with the acquiescence of the Philippine government, we have chosen to extend our law to the Philippines, and I shall go along with that method. I want to see an export-control law for the Philippines. That is the leading consideration.

Mr. Speaker, my sole interest now is to see to it that the law we shall make applicable to the Philippines will achieve its purpose and not become ineffective in view of certain peculiar situations that may obtain in that section of the world.

I am presenting now for the RECORD a terse memorandum by Mr. Villamin which contains facts and raises questions which I am sure should receive the attention for remedial action of Brig. Gen. Russell Maxwell, of the Export Control office, and Mr. Dean Acheson, Assistant Secretary of State, both of whom addressed the Committee on Military Affairs on Senate Joint Resolution 76. As I understand it, their statements did not cover the matters presented in the Villamin memorandum.

Yesterday I introduced in the RECORD the fine statement of Mr. ELIZALDE, the Philippine Resident Commissioner, to the Military Affairs Committee, in which he expressed the eagerness of the Philippine government to cooperate with our Government in this matter of export control, for which I wish again as a Member of Congress to register my appreciation. The Commissioner's statement does not, however, contain a detailed discussion of the intrinsic issues to which the export-control law may give rise.

Mr. Villamin poses the question that since shipments to Russia are not under ban under the policy of our Government by which the so-called "moral embargo" on that country has been lifted, shipments from the Philippines could be made to Vladivostok and from there redirected to Japan, a matter of a day's steamer sailing, thereby defeating the export control law. This especially refers to shipments of iron ore of which the Philippines exported to Japan 1,192,000 tons in 1940 in comparison with nothing in 1933 and only 283,000 tons in 1935.

Concerning copra, coconut oil, and other materials now being imported to Japan from the Philippines over and above Japan's normal requirements and which are probably reexported to Russia and from there to Germany, the shipments of these materials to Japan will stop under the export-control law, but such shipments could go on direct from the Philippines to Russia, and there again the export-control law would be defeated.

He also points to the fact that shipments from the Philippines could be made to ports in China, especially those under Japanese control, and from there transported by the Manchurian Railway to connect with the trans-Siberian railroad on the north. And for that matter, such shipments could be rerouted to Japan as in the case of Vladivostok with the possible difference that it would be

harder to discover the process in the latter case.

Mr. Speaker, there is absolutely no doubt that vital and pertinent questions have been raised in the memorandum, and I am afraid that if we do not meet them satisfactorily there will be but little use of having an export-control law for the Philippines.

As I want to see the resolution become a law with the greatest legislative speed, I plead that Government agencies concerned with this matter, particularly the Export Control office in the War Department under Brigadier General Maxwell and the State Department, whose activities are under Mr. Dean Acheson, should examine this additional matter and offer remedial suggestions.

It may be necessary for the Military Affairs Committee to meet again immediately to hear further statements. I have the word of Mr. Villamin, who has studied the question very fully, that he would be glad to give more explanatory and supplementary information and discussion if and when desired by the committee.

His memorandum, which follows, contains two possible suggestions to remedy the questions which he raised.

His first suggestion is to have shipments to China or Russia covered by affidavits by buyer possibly to be supported by cash guaranties that the goods are for local consumption in those countries. He does not believe this could be very effective, for it would be almost impossible to enforce it.

His second suggestion is to have either the American or the Philippine governments, or both, to take the goods refused shipment under the export-control law on just compensation to form reserves or stock piles. In the event the Philippine government is to make the stock piles, adequate financial assistance will have to be given that government.

Mr. Speaker, I wish again to express my pleasure that the Philippines is going to have an export-control law and to thank President Manuel L. Quezon for his splendid spirit of cooperation in this connection.

The memorandum by Mr. Villamin follows:

THE VILLAMIN MEMORANDUM

(May 15, 1941)

Let me say at once that I favor an export control law for the Philippines. I hope the pending joint resolution extending section 6 of the act of Congress of July 2, 1940, may be acted on with the greatest legislative speed.

The questions I am raising here are vital and pertinent. I am convinced that they deserve consideration by Congress and the administration. Having studied the question of export control, I am desirous of cooperating to the end.

Our concern now is how to prevent the law from becoming toothless by circumvention. The following précis of facts presents situations that obviously require remedial treatment either by legislation or by administrative action.

As the situations here presented revolve around the position of Russia, it is pertinent to set forth the background of America's policy toward that country in relation to the export-control law.

On December 2, 1939, President Roosevelt, announcing to the press what has since become known as the moral embargo, declared that he hoped that American manufacturers and exporters of airplanes and parts thereof would bear the fact in mind before selling to certain foreign countries that the policy of the American Government condemned the unprovoked bombing and machine-gunning of civilian populations from the air.

The State Department, in statements dated December 15 and 20, 1939, pursuant to the announcement of the President, above quoted, enumerated more materials under "moral embargo" and suggested that the national interest required that there should be no further delivery to certain countries of plans, plants, manufacturing rights, or technical information needed for the production of high-quality aviation gasoline.

On July 2, 1940, the export-control law was passed, being section 6 of the act of Congress of July 2, 1940, entitled "An act to expedite the strengthening of the national defense."

As administered in pursuance to national policy of retaining the friendship of Russia, this law does not affect shipments of American goods to that country. It is not inconsistent with this policy for the United States to refuse shipments to Russia when local needs and priorities so require.

According to the latest information, the Russo-American commercial relations—again in obedience to national policy—are to be expanded rather than contracted. This means that sales to Russia will be subjected to the minimum of restriction and interruption.

On January 21, 1941, Under Secretary of State Sumner Welles advised the Russian Ambassador at Washington, Mr. Constantine A. Oumansky, that "the Government of the United States of America has decided that the policies set forth in the statement issued to the press by the President on December 2, 1939 [mentioned above] and generally referred to as the 'moral embargo,' are no longer applicable to the Union of Soviet Socialist Republics," adding that "this decision is being communicated to interested American manufacturers and exporters." In other words, shipments to Russia are not barred.

The foregoing statements show that Russia can buy goods from the United States, and if Russia can buy from the United States she can buy from the Philippines. Now let us see how this will work in the Philippines and consider if the export-control law will not be rendered without effect if something is not done about it.

As I have already stated, here in the United States Russian orders for American goods under ban are made dependent on priorities and local requirements. The orders, with regrets, are often not filled for that reason. The American Government has first call on the goods, and it purchases them either for immediate use or for its reserves.

On the contrary, the Philippine government is not in a position today to refuse the Russian purchaser of Philippine products for a similar reason. If it approves the sales to Russia merely for the sake of selling it, it would not be going along strictly with certain imaginable policies of the United States. And if it disapproves the sales for no reasons as justified as that given by the United States in a similar case, it would violate the American policy toward Russia. Thus the Philippine government would be impaled on the two horns of the dilemma.

If the American Government will have exclusive control of enforcing the export-control law in the Philippines, then the Philippine government would be relieved of much, if not all, of its conceivable problems in this connection. The American Government naturally will get the obligations resulting from its enforcement of the law. Thus, I believe, it would be proper for the American Government to purchase for immediate use or for the stock piles Philippine products refused sales to foreign countries, including Russia, for reasons of priorities or American requirements. To this end it may be necessary to relax the quantitative quotas on Philippine products as provided in the Tydings-McDuffie Act.

Consistent with the idea set forth in the foregoing paragraph is the thought that if the Philippine government is to be expected to purchase unfilled foreign orders, that government, it seems to me, is entitled to be placed in funds to do so. That government is eager to cooperate with the United States to its fullest ability, but its financial resources are limited. It is considering asking for a loan from the United States Government.

Now I shall set forth some patent instances which could render the export-control law ineffective and illusory.

First. Under the law, shipments of, say, iron ore to Japan from the Philippines will stop. But such shipments could be made to Vladivostok or some Chinese ports, especially those under Japanese control, and from there rerouted to Japan, a matter of 1 or 2 days steamer's sailing. A precedent in point is the discovery a few years ago of shipments of textiles from Japan to the Philippines via Hong Kong, defeating a Japanese-American executive agreement on maximum quotas. The quotas were exceeded through that circuitous triangular procedure.

Second. That part of the imports of Japan from the Philippines which is over and above her normal requirements and which conceivably are being reexported to Russia or China destined for Central Europe via the trans-Siberian, Polish, and German railroads need not be missed by Russia and China, because it could be shipped direct to them.

These two possible situations, if not solved, would make the export-control law almost a surplusage.

My first suggestion as a remedial measure is what I have already stated, namely, that the government take over the goods that are refused shipment from the Philippines to certain foreign countries.

A second possible remedy would be to require Russian and Chinese and other unbanned purchasers of Philippine goods to make an affidavit, supported by cash guaranties, that the goods purchased are for final consumption strictly within their territories. This remedy is not dependable and well-nigh impossible of enforcement.

The above memorandum has been prepared in a rather hurried way, but its author is ready to respond to any request for further information as he is desirous as a Filipino citizen to give his cordial cooperation and his best thoughts in the interest of national defense.

As in my previous memorandum on Philippine exports, I have not given the iron-ore shipments to Japan. I am giving them hereinbelow:

Exports of iron ore to Japan, being 100 percent of Philippine total exports

	Metric tons
1940	1,192,000
1939	1,155,000
1938	911,000
1937	599,700
1936	654,000
1935	283,000
1934	7,000
1933	Nil.

Mr. Speaker, thus far is the latest memorandum of Mr. Villamin. In order to present an integrated body of facts and statistics in connection with the Philippine export-control law, I wish to again refer to my speech in this House of March 31, which contains Mr. Villamin's memoranda on the movements of other Philippine products between the Philippines and Japan, Russia, and the United States. Those memoranda represent

extensive work of research and correlation, and for all of which Mr. Villamin is entitled to the grateful acknowledgment of our Government.

St. Lawrence Waterway and Power Project

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

RADIO ADDRESS BY HON. GEORGE H. BENDER, OF OHIO

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered yesterday over the radio:

A few years back Uncle Sam embarked upon one of the greatest engineering experiments in the history of mankind. It was a project truly worthy of Hollywood's choicest adjectives, "colossal," "terrific," "super-super." Up in Maine the folks were excited. Their Government down in Washington was going to harness the tides. The tides are still unharnessed and Passamaquoddy is now only a memory. A few mere millions were sunk in the mud, but they were speedily forgotten as the Washington merry-go-round whipped furiously off to newer and still more intoxicating pleasures.

Some of us remember, too, the Florida ship canal proposal. It was going to cut a channel across the northern end of Florida to encourage commerce and bring the more abundant life to thousands of men and women down South. That one got into the moving-picture newsreels. We saw wonderful pictures of a huge dried-up ditch, with a good deal of rusty looking machinery along the sidelines. By the time it had disappeared from the picture it wasn't even regarded as a potential celery patch.

The St. Lawrence waterway proposal, whatever its merits may be, comes along as a fitting successor to the grandiose schemes concocted by the febrile imagination of the New Deal. Like both of the other projects, a feeble effort is being made to link its construction with a national-defense build-up. The utter puerility of this endeavor is apparent at the merest glance. Two other arguments have been invented to reinforce the recognized weakness of the defense position. Washington sources "close to the President" have urged the St. Lawrence waterway as a potential producer of hydroelectrical power on a tremendous scale. Then, too, they argue that the St. Lawrence development would enable us to build shipyards on the Great Lakes beyond the reach of air raids.

An examination of each of these arguments is certainly in order before Congress votes huge sums necessary for this project.

To consider the defense suggestion is to recognize its futility. Defense is an immediate problem requiring, as the administration repeatedly has pointed out, concentration of all our industrial and economic forces upon the production of ships, planes, tanks, and other munitions. By the most optimistic estimate the power project of the St. Lawrence proposal could not be completed before 1946. Insofar as use of the Lake ports is concerned for the construction of ships of war, the scheme is impracticable, since the seaway could not be in condition to float such vessels before 1948 or 1949. Meanwhile no provision whatever has been made for adequate harbors or docks at the Lake ports for the accommodation of ocean-going vessels or the construction of ships of war. Proponents who advance this latter suggestion are out of line with expert opinion that vital sections of the seaway and power works would be exceedingly vulnerable to aerial attack and sabotage. The dam in the International Rapids section of the St. Lawrence, which is only a little more than 200 miles from the seacoast, would be especially vulnerable and, if destroyed, would trap all naval and other craft being constructed within the Great Lakes.

Furthermore, instead of aiding the defense program, it is the opinion of competent authorities that it would retard it by withdrawing from immediately necessary projects labor and material in vast amount. The same thing applies to the tremendous sums of money that would be withdrawn from our defense effort to finance the seaway and power project. If we are still in the defense emergency, our entire economy will be far out of line in the years between 1946 and 1949. The St. Lawrence proposal will be only a minor matter in comparison with our entire defense machinery. Every defense expert believes that a 5-year period will take our efforts completely beyond the realm of practicability. We cannot work now on defense projects so far removed into the future.

Chief among these obstacles in the St. Lawrence proposal is the belief of many well-informed Americans that in the immediate world emergency the millions of dollars (possibly reaching a billion, in fact) could be better spent for more pressing needs.

From the standpoint of national defense we must consider no less than five difficulties:

(1) The most optimistic estimate places the completion date of this project at a time somewhere in 1946–49.

(2) For the amount of money necessary to build the waterway we could build more than one hundred destroyers, thirty 10,000-ton cruisers, or fourteen 35,000-ton battleships. Ask Winston Churchill which he would prefer—the St. Lawrence development or the battleships, and you have an irrefutable answer to the specious argument that this proposal is an element in national or international defense.

(3) We are engaged in building the greatest standing Army and developing the largest Navy our country has ever known. The funds necessary to complete the waterway amount to more than the normal peacetime appropriations for both our Navy and our Army. I believe that as a nondefense expenditure these funds should not be appropriated where there are urgent defense needs still to be met.

(4) The argument that the development of hydroelectric power made possible by the project could be used for defense purposes is meaningless in the light of the fact that this power would not be available for several years, and in the realization that there stands an idle power plant at Niagara Falls capable of generating vast amounts of electric current still seemingly unnecessary.

(5) Mr. Roosevelt has said in support of the project that it is necessary in order that we may produce electric power "necessary to national defense."

As I have said, the power part of the project could not become operative until 1946. Meanwhile, we have at hand virtually inexhaustible supplies of coal for the generation of steam power where such power is needed, in adequate amounts and at one-half the cost of hydroelectric power. And in this connection it is pertinent to point out that both the proposed seaway and the power-project menace the future prosperity of one of our leading industries—coal mining. Experts of that industry who have studied all the reports and engineering data on the St. Lawrence project assert that the hydroelectric plant in the St. Lawrence would be directly competitive with steam production of power and that if the suggested 1,100,000 horsepower (the American share of production) were achieved, the coal equivalent of such a block of power would be 5,139,000 tons annually.

We must bear in mind several other factors, too, in seeking to reach a fair and intelligent conclusion with respect to the St. Lawrence proposal. The St. Lawrence is navigable only from May to November of each year. Available statistics indicate that only 5 percent of the ships which might make use of the waterway are American owned. Literally hundreds of labor organizations have gone on record in opposition to the proposed development. Railroads, inland water carriers, ports along the Atlantic and the Mexican Gulf are equally opposed to the proposal.

As for the assertion with respect to the construction of oceangoing vessels out of the reach of bombing planes, the answers seem all too obvious. We know enough about the tremendous progress of aviation to realize that no man may set limits today upon the range of military planes tomorrow.

When we realize these many objections to the St. Lawrence, and when we recognize that American taxpayers are already being burdened with tremendous taxes, with more in store for next year, I believe that we must determine to postpone consideration of the St. Lawrence waterway until such time as we can discuss it objectively and until we can afford to construct it.

And this is where the debate stands for the present. We have a choice before us. Is it more useful to spend our funds for the construction of this waterway than to spend them for the construction of more planes, ships, tanks, and guns? Would Winston Churchill, answering this question for us, choose the St. Lawrence waterway or would he choose the weapons of war?

In analysis it appears clear that this project, the cost of which might approach a billion dollars, promises little benefit to the American farmer, threatens the continued prosperity of miners and railroad employees and industries unable to meet the competition of cheap foreign labor products of which can be transported by foreign vessels at low operating costs and distress ocean freight rates.

Such competition would strike seriously at the prosperity of industries which depend upon our great inland markets, would cut down employment in our industries, and reduce revenues to our railroads, inland water carriers, and port and terminal facilities.

We have no clear conception of the cost of the project. It is variously estimated, as I said, to range between $600,000,000 to $1,000,000,000. We have, however, the precedents of similar constructions to guide our opinions on this proposal. We know that costs in the construction of seaways and canals greatly exceeded early optimistic estimates.

We know also that estimates of Government expenditures invariably fall far short of expectations. We have one example of that in recent disclosures of the estimates and actual costs of Army cantonments.

In this time of vast expenditure on immediate necessities of the defense program, with the prospect of tax burdens exceeding all levies in our history we should exercise the greatest caution in undertaking commitments which are not vital to our immediate necessities.

In my judgment, this is no time for another Passamaquoddy. Let us not squander funds in time of danger which we have refused in times of peace.

Housing Facilities for Government Agencies and Employees

REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

Mr. SABATH. Mr. Speaker, last week I called to the attention of the House the overcrowded conditions existing in the city of Washington. Since that time I have heard from many Members asking that something be done to relieve it. I have therefore prepared a resolution which I am going to file requesting the President to make some arrangements whereby some of the bureaus and departments not connected with the defense program would be moved to other cities where there is plenty of space—where there is no overcrowding.

This will bring about greater economy and greater efficiency, and I would like especially to point out the fact that Chicago is the focal point at the very center of our country and most favorably located to agriculture and industry. It must also be recognized that it is the railroad center of America, and in that connection I feel that the Interstate Commerce Commission would find that it would function most efficiently from Chicago; also, there is no reason why the Social Security Board and most of the bureaus of the Departments of Agriculture and Interior cannot be transferred to advantage. The transfer of these bureaus and agencies alone would relieve to a great extent the overcrowded conditions in Washington and, I repeat, would result in greater efficiency and economy.

Mr. Speaker, I ask unanimous consent to embody in my remarks the resolution I am now filing, and I hope it will have the support of the membership.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The resolution referred to follows:

Whereas, due to the national-defense program, new bureaus and agencies have been created requiring additional office and working facilities in the city of Washington; and

Whereas, due to the tremendous increase in the personnel of Government service which has resulted not only in an overcrowding and lack of office facilities but in a serious shortage in hotel accommodations, rooms, houses, and restaurant facilities; and

Whereas adequate building and housing facilities may be had without delay not only in the city of Chicago but also in other cities favorably located, where the cost of living is more reasonable than in the city of Washington; and

Whereas, due to its central location and accessibility, many Government agencies conduct hearings and carry on other activities in the city of Chicago; and

Whereas if such agencies are located in the city of Chicago the Government will save tremendous sums in rentals, traveling expenses, and the time of its officials, and the removal of such agencies to Chicago will afford Government employees lower costs in living, better working and housing facilities, and will tend for higher efficiency: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That the President is requested and authorized to direct the transfer from the District of Columbia to Chicago or elsewhere such departments, or bureaus thereof, and such independent agencies whose activities can be conducted at least as efficiently and economically in such locality designated by him.

Gasoline-Tax Increase

EXTENSION OF REMARKS
OF
HON. WILLIAM H. LARRABEE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

RESOLUTIONS ADOPTED BY CONFERENCE OF INDIANA HIGHWAY USERS

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a statement prepared by the Indiana Highway Users Conference, at their meeting at Indianapolis, Ind., May 8, opposing the proposal to increase the Federal gasoline tax.

It is my belief that the statement conveys the sentiment of a very large portion of the taxpayers, and I feel that their views deserve our most careful consideration.

The statement follows:

To bear a fair share of the cost of general government is the responsibility of every citizen throughout the country, and Indiana citizens will not shirk that responsibility. This is particularly true of the cost of the national-defense program.

The Federal gasoline tax is an excise tax, and the revenue it yields now is being used to finance general governmental functions, including national defense. The annual payment made toward the cost of general government by an individual in the form of Federal gasoline taxes obviously is measured by the amount of gasoline he consumes. Some individuals consume more than others because they live farther from their place of employment or because as farmers or salesmen they must consume gasoline to make a living. Accordingly, their Federal gasoline tax payments for the support of general government are greater.

It is the opinion of the Indiana Highway Users Conference that dependence on the gasoline tax to raise revenue for general governmental purposes is unsound because the distance a citizen travels on the highways or the extent to which he uses his farm tractor is a very poor measure of his responsibility for the cost of government.

These considerations have become particularly significant with the initiation of the preparedness program by the Federal Government, evidences of which may be seen in all parts of Indiana. Shortage of housing and labor in centers working on defense projects is requiring the assembly of skilled industrial workers from wide areas throughout the State and even from neighboring States. The transportation of these workers to their jobs has been facilitated by the private automobile to a degree possible by no other means. Consequently, workers are known to be driving back and forth to work each day on a round trip taking 4 hours, not through preference but through necessity.

In Indiana, hundreds of thousands of such workers are engaged in such defense production. There are the airplane parts and munitions plants at Indianapolis, the munitions plant in Union Center, the airplane motor plant at South Bend, the steel plants at Gary and other points throughout the State, and the aircraft plants at Fort Wayne. Studies by the Automobile Manufacturers Association show that about 70 percent of these workers depend upon their own automobiles and those of fellow workers in traveling to and from their jobs.

It would be unjust to increase the gasoline tax and penalize those Indiana citizens who thus must sacrifice a substantial portion of their own time in getting back and forth to their defense work by automobile. In addition to making sacrifices in personal time through no choice of their own, they would be called upon to pay a greater share of the defense costs, simply because they had to travel farther to get to their jobs.

The significance of the automobile as a means of transportation for defense workers is emphasized even further when it is appreciated that two-thirds of all the communities in this country with a population of more than 2,500 possess no system of mass transportation whatever, i. e., trolley or bus lines.

Gasoline consumed in motortrucking also is of vital importance to satisfactory completion of the defense program. This factor is especially significant because 1,213 communities in Indiana are not served by the railroads. Hence, their residents must depend wholly upon motor transportation for their contact with the outside world. Moreover, it is a definite national objective to disperse plants engaged in defense contracts away from railroad terminals and other similar centers of communication for strategic military reasons. Such plants must be served by motor transportation to get employees, raw materials, and finished products to and from these isolated localities.

Because the Federal gasoline tax has proven itself a substantial producer of revenue, there is temptation to turn to this tax again as additional revenue is needed. There is a tendency to forget that the gasoline tax is essentially a State tax, that every State in the country taxes gasoline, some at rates as high as 7 cents a gallon. In several States, local governments also impose their own gasoline taxes. A Federal gasoline tax necessarily must be considered as an addition to these taxes in order to weigh properly its burden.

Indiana collected a State tax on gasoline long before the enactment of any Federal gasoline tax and currently taxes gasoline at the rate of 4 cents a gallon. Together with the current Federal tax of 1½ cents a gallon, the State gasoline levy represents a sales tax of 38 percent on the retail price of gasoline at the service station in South Bend. Yet a retail sales tax of 3 or 4 percent usually is considered unreasonably excessive.

The gasoline tax now is an established factor in the Indiana State tax system. In current years it has produced about 32 percent of the total tax revenue of the State. Except for pay-roll taxes for social security, no other single tax produced as much revenue for the State.

Using revenue from the State gasoline tax and other highway-user levies, income from bond issues, and funds provided by the Federal Government's program of highway aid, Indiana has invested hundreds of millions of dollars in an extensive State highway system. Moreover, the counties, towns, and cities throughout the State receive from the State highway fund considerably more than $10,000,000 each year to spend on local

roads and streets. This investment would be jeopardized if the income of the State highway department, which is so dependent on the yield from the State gasoline tax, should be undermined by excessive duplicating Federal gasoline taxes, because roads must be properly maintained or they deteriorate rapidly.

Without complaint, Indiana motor-vehicle operators have accepted an extra portion of the costs of national defense. During 1940 the increases enacted in the Federal gasoline and automotive excise taxes were considerably greater than those imposed upon any other taxpaying group.

As average citizens motorists pay all the general taxes levied by the Federal Government. In addition, as highway users, they alone pay the special automotive taxes. As a result, Indiana motorists now are contributing in excess of $13,500,000 more each year to the Federal Government than other citizens of Indiana who do not operate motor vehicles.

Reliable studies by Federal governmental agencies disclose that the average Indiana motorist earns between $20 and $30 weekly. In spite of his low income, the Indiana motorist now bears a disproportionate share of the State and Federal tax burden. Special State automotive taxes are now costing the average motorist in Indiana more than $38 annually. Federal automotive levies extract an additional $15 per year. Indiana motorists, therefore, spend about 2 weeks' wages just to meet their annual automotive tax bill. Of course, motor-vehicle operators pay all the general State taxes, too.

Gasoline often carelessly is classified with liquor, cosmetics, and other luxuries. Such a classification is both erroneous and misleading. In most Indiana car-owning families transportation by automobile ranks right along with food, shelter, and clothing as a necessity of life.

The majority of all passenger-car travel on the highways is strictly for business purposes, according to Government studies. Recent traffic surveys indicate that nearly two-thirds of all traffic in Indiana is business and commercial traffic. Trucks alone account for more than 25 percent of all gasoline consumption in the State. And yet, both the State and Federal Governments tax gasoline as if it actually were a luxury.

Increased gasoline taxes inevitably must result in increased costs of moving goods vital to national defense, for the motortruck is depended upon to correlate the productive efforts of the entire Nation. Production centers are vitally dependent upon rapid and efficient highway transportation, and thousands of industrial workers and miners must use the automobile for transportation to and from their job of rearming America.

Since complete freedom of the highways, obviously, is essential to the defense efforts and to the conduct of civilian life, it is, therefore, well to consider that a further tax burden upon highway users may act as a barrier to trade which seriously will impede the Nation's efforts rapidly to attain complete preparedness.

The Indiana Highway Users Conference embodies the following organizations: Hoosier Motor Club; Automobile Dealers' Association of Indianapolis; Indiana Motor Traffic Association; Indiana Bus Operators' Association; Indiana Independent Petroleum Association; Indiana Farm Bureau; Indiana Petroleum Industries Committee; Indiana Retail Hardware Association; Private Truck Owners of Indiana, Inc.; Indiana Lumber and Builders Supply Association; Manufacturers of Dairy Products; Indiana Bakers Association; Indiana School Bus Drivers' Association; Indianapolis Auto Trade Association; Indiana Rural Letter Carriers' Association.

In Memory of Andy Smith

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

POEM BY HORACE C. CARLISLE

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit for insertion a poem written by Horace C. Carlisle in memory of William Andrew Smith, long and affectionately known by everyone on Capitol Hill as Andy Smith:

Precious in the sight of the Lord is the death of His saints. Psalms 116: 15.

ANDY SMITH

William Andrew Smith is gone,
Loved by everyone who knew him.
Every year, as time moved on,
Drew his friends the closer to him.
When, at eighty-six, he died,
Heaven's guardians saw to it
That the gate was open wide
And he peacefully passed through it.

All the Capitol reveres—
Friends, acquaintances, and neighbors,
Him who, sixty-five long years,
Was untiring in his labors;
And, because he was so kind,
Gentle, courteous, and clever,
Andy Smith will live, enshrined
In our memories forever.

There, in Statuary Hall,
At his desk, no more we'll greet him—
Every morning when we call
For a RECORD we'll not meet him.
We who knew him lost a friend
Whose sweet memory we'll cherish,
Which can, till our lives all end,
Never, never, never perish.

—*Horace C. Carlisle.*

Longevity Pay for Postal Employees

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, May 16, 1941

ADDRESS BY JOHN J. BARRETT

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on May 2, 1941, by Mr. John J. Barrett, president of the United National Association of Post Office Clerks, on the subject of Longevity Pay for Postal Employees.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening radio audience. In the beginning I want to thank this station for giving me this opportunity to speak with you for a few minutes about the Postal employees. God has blessed our country in many ways and one of those blessings is the fact that its employees throughout the years have proven to the American people, and to the world at large, that they are faithful and loyal. They are efficient and strive to increase their efficiency. This must be said of the employees of the Postal Service. Twenty-four hours a day, around the clock every minute of the hour, you will find a post-office clerk on duty, hail, rain, or shine, he performs his appointed rounds. His services are not confined to postal duties alone as witnessed by the distribution of the veterans bonus, the registering of the unemployed, the registration of the workers of this Nation for social security, the gigantic task of registering the aliens residing in this country and now the sale of defense bonds, and many more jobs of great magnitude not within the scope of the Postal Service. All of these tasks were performed faithfully and well. Nothing is more valuable to an employer than honesty, faithfulness, loyalty, and devotion to duty; it can well be said that Postal Employees possess all of these fine qualities. They devote their life to their job, thereby causing the least possible turnover of labor in any Government department. We all know how costly changing of employees is to an employer.

Are they not entitled to a reward for their long years of meritorious service? I believe the American people will answer "yes" to this question.

At no time in the past or at present have the postal employees received compensation comparable to their real worth. We ask our postal employees to be good citizens, we demand that they be a credit to our Postal Service, to themselves, and their families. We expect them to live and to rear their families according to the American way of life. We expect them to educate their children, to fortify them with the necessities of this life, and when we do this, and most of us do, we find after our task has been completed, we have little to look forward to for ourselves. Up to now Uncle Sam has not appreciated these men of the Postal Service for the work they perform so faithfully and well.

In 1928 the first longevity bill was introduced in the Congress, and in each succeeding Congress similar bills have been introduced. However, no action was every taken on any of these bills. The opportunity for promotion in the Postal Service is very much limited. The record proves this to be so, therefore, we must create an incentive for those men of the Postal Service who have not been fortunate enough to secure promotion to continue their loyalty and devotion to duty.

I know of no better way to accomplish this than through the establishment of the principle of longevity. I do not believe it is asking too much of the American people to reward its employees, who have proven their real worth, with the sum of $100 after they have served 10 years and for each succeeding 5 years, until he has completed 30 years.

Private industry rewards its faithful employees, so do individuals, why not the great-

est Government on earth? May I ask you to write your United States Senator and your Congressman in our behalf?

I Am an American Day

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

Mr. RANDOLPH. Mr. Speaker, it is good that President Roosevelt, in accordance with an act by Congress, has proclaimed Sunday, May 18, as I Am an American Day. It is being observed in recognition of our citizens who have attained their majority or who have been naturalized within the past year.

Mr. Speaker, in connection with this subject I desire to include at this point certain parts of a speech by Hon. W. E. Baker, Federal judge for the northern district of West Virginia. It was given when this jurist spoke to 52 new citizens recently in Wheeling. The Intelligencer tells the story in the following way:

Judge Baker opened his address by giving the new citizens a warm welcome.

"You should be happy, for there is no earthly possession of greater value than being a citizen of the United States of America." He then briefly outlined the spiritual, philosophical and legal principles underlying what we call America, and demonstrated how the laws and customs of the United States have ever basically followed the preamble of the Constitution, and particularly the first series of amendments known as the Bill of Rights. After reciting these fundamental and undeniable rights of every American citizen, whether native born or naturalized, Judge Baker interpreted the same in plain language which all could readily understand. All this means, he said, "that you can go to any church you please; that you can see, read, and hear anything you like; that you can express your opinion freely; that your mail will not be opened or your telephone tapped; that you may join any political party of your liking; that you can vote for what or whom you please; that you can ever demand and get a trial by jury of your fellow citizens, if accused; and that neither your life nor property may be forfeited nor even your home searched without due process of written law."

The Federal jurist then explained that it is not necessary to be a lawyer to comprehend the primary purpose of all sound American law—that the Golden Rule always has been the guiding principle: "The Golden Rule," he said, "with but slight variation of phraseology, is the basis of every great world religion—the Christian, the Buddhist, the Confucian, the Mohammedan, the Hebrew, and even the great mythologies of antiquity. It is a striking historical fact that so long as a people practiced this principle in their daily lives, they survived; and that when they ceased to make it their guiding and abiding principle in both their private and their public lives, they perished." He then sharply contrasted the rights, privileges and safeties guaranteed by American law with the harsh and sumptuary dictates of Nazi and Communist governments, in which the citizen is simply the hopeless slave of a party, which is the "state," pointing out how this affected every kind of human activity—the home and the church, industry and the arts, and every domestic or civil consideration.

REVERE THE LAW

This led to an eloquent plea for law-observance by all, inasmuch as the people alone have power to make, amend, or repeal the laws which govern them in this democracy as they see fit. He quoted from Lincoln: "Let reverence for the law be breathed by every American mother to her babe. Let it be taught in the schools and colleges. Let it be preached from the pulpit, proclaimed in the legislative halls, and enforced in the courts of justice. In fine, let it become the political religion of this country."

Judge Baker's concluding words were: The American Republic must always be true to itself, ever ready to protect the rights of the humble, to redress every wrong, to avenge every crime, to vindicate the majesty of the law, and to preserve inviolate our sacred principles of free institutions against enemies from within and against the attacks of pernicious alien propaganda whether armed with gold or armed with steel.

"Rome endured as long as there were true Romans and our beloved country will endure as long as we remain true Americans in spirit, thought, and deed."

Mr. Speaker, I wish to include also the following editorial from the Pittsburgh (Pa.) Sun-Telegraph:

I AM AN AMERICAN—A PRICELESS BOON

President Roosevelt has asked the American people to observe Sunday, May 18, as I Am an American Day for the following purpose:

"To impress upon all our citizens, those native born and naturalized, the special significance of citizenship in this Nation."

The President may be sure his urging will not be in vain.

His suggestion fits squarely with the new national practice of designating a special day, and in many cases an entire week, for emphasizing the duties and privileges of American citizenship—and, of course, it was meant to do so.

American Citizenship Week, in fact, will be so widely observed throughout the United States this year during the week of May 12 to 18 that it hardly seems possible the movement could have attained its present importance and scope in just 2 years.

But that is exactly what has happened.

Two years ago, the observance of citizenship day was a purely local event in the city of Manitowoc and the county of Manitowoc in the State of Wisconsin. The object of the observance was to assemble all of the young people of the community who had attained the age of 21 during the year at a public ceremony, welcoming them to the status of American citizenship.

On that particular occasion 2 years ago the Hearst newspapers noted that 350 young men and women of the Wisconsin community had been so honored. The scene was so inspiring, and the idea so meritorious, that these newspapers were prompted to suggest Nation-wide emulation.

The response was amazing. In a matter of weeks cities as far away from Wisconsin as San Francisco and Los Angeles had likewise honored their newest citizens. Pittsburgh joined the movement at an early date.

And a year later, with the support of the American Legion and the National Education Association, there were Citizenship Day observances in a majority of the States.

While the original purpose of honoring new citizens is more than ever characteristic of the special day or week devoted to emphasis on American citizenship, it was inevitable that infinitely broader purposes would be served.

The special significance of citizenship is, of course, not a matter that relates to special groups.

As the President says, it is a matter of significance to "all our citizens, both native-born and naturalized."

Thus the privilege of saying, "I am an American," extends to all who are worthy of it and accept its obligations and conduct themselves in accordance with the fundamental principles of this Nation.

The manner of observance of "I Am An American Day" and of American Citizenship Week will vary in the several States.

In many communities, such as in San Francisco, where Mayor Angelo Rossi has appointed a special committee of citizens for the purpose, separate days of the entire week will be designated for specific purposes.

The functions and duties of government will be discussed for the information and enlightenment of the people on one day.

Other days will be devoted to greater appreciation of our basic American liberties, the freedom of speech and assembly, the freedom of the press and of religion.

Still other days will stress the historic background and tremendous merit of free education.

And, of course, those who attained citizenship during the past year, either by naturalization or attainment of maturity, will be recognized and honored on their special day.

This is one of the most constructive and invigorating of all our public enterprises.

It attests the alert and earnest Americanism of the President that he lends the weight of his high office and the inspiration of his exceptional personality to such an enterprise.

Never at any time in our national history has there been greater need for appreciation of the significance of American citizenship.

It is the target of alien, radical, and skeptical and disloyal attack. But it is also the hope of the civilized world and the richest possession of every man and woman who can say in all pride and humbleness, in all gratitude and appreciation:

"I am an American."

The Imperative Necessity of Economy—How To Save $2,000,000,000 in Expenditures

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

STATEMENT BEFORE THE WAYS AND MEANS COMMITTEE BY DR. GEORGE S. BENSON, PRESIDENT OF HARDING COLLEGE, SEARCY, ARK.

Mr. TREADWAY. Mr. Speaker, it is my desire at this time to call to the attention of the House a most remarkable statement made before the Ways and Means Committee yesterday in the course of the hearings on the proposed tax bill. The statement deals principally with the imperative necessity of economy in Government expenditures, and specific references are made therein as to how we can save $2,000,000,000. For the latter reason

alone it is worthy of most serious consideration.

I have been a member of the Ways and Means Committee for a good many years, and I can truthfully say that this statement is one of the best that has ever been presented to the committee, not only during the present hearings but in my entire service. It was made by the president of a small college in Searcy, Ark., Dr. George S. Benson. We are accustomed to thinking of professors as impractical men, but Dr. Benson, both as manager of a school in Canton, China, and as president of Harding College, has had a good deal of practical experience in economizing and in getting the most for the limited funds at his disposal. During his experience in China, he said, he had learned the value of a tenth of a cent. Harding College, he told the committee, has no endowment and no State assistance, yet one can send four boys through the school for what the Government spends on one C. C. C. boy, provided the student works about 1 hour a day. One of the members of the committee paid Dr. Benson the compliment of saying that if he had a boy of university age he would certainly send him to Harding College.

Dr. Benson told the committee that Harding College had doctors of philosophy on its faculty receiving only $1,200 per year, while the largest salary paid was $1,800. Yet the high character of the college is attested by the fact that its students have won the highest awards in the great majority of scholastic contests.

I mention these facts so that the Members of the House may see that Dr. Benson is eminently qualified to speak as an expert in economizing. In my opinion, his statement should be circulated all over the United States. Here is a gentleman who has come out of the West from a small and little-known college to show the Congress how it can save money—a lesson which it needs to learn badly.

Dr. Benson was complimented on his testimony by numerous members of the committee, and I made the statement that as soon as the House convened today I would seek to have his able and forceful remarks made a part of the RECORD, which permission I now request, Mr. Speaker.

The statement follows:

STATEMENT OF DR. GEORGE S. BENSON, PRESIDENT OF HARDING COLLEGE, SEARCY, ARK., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, MAY 15, 1941

My name is George S. Benson. I am president of Harding College of Searcy, Ark. I represent a small college, located in a small town, in a small State, but I know of no bigger, nor more important idea than the one to which we wish to add our testimony. Gentlemen, the citizens of Arkansas are interested in economy—individual economy, and governmental economy. They are expert at paring expenses to the bone. They have to be.

The average per capita income for all Arkansas residents is only $255 a year. For a family it is $969. If our people were not expert in eliminating unnecessary expense they could not live.

During the past 4 years our college has carried on a program to which the instructors and professors of every college in Arkansas were invited, and to the meetings of which heads of departments from every senior college in the State came. In these meetings economists and financial men, including Dr. E. W. Kemmerer and others of national reputation spoke and led discussions.

As a result of this program I have become increasingly interested in our Nation's financial future.

I have read all I could of the testimony given at your hearings.

I have recently discussed the subject which I am to present with the leading people of my State, including the former Governor of Arkansas, the president of the Federal Reserve bank, and so forth. A great deal of material has been furnished me by them.

I believe that these ideas are approved by the great majority of the citizens of my State, and I know that their manner of living is entirely consistent with these ideas.

You have heard quite a few witnesses from Chicago, New York, and also from various States, but I believe I am the only one who has come from Arkansas, and I hope you can spare 15 or 20 minutes for our views.

I wish to discuss the importance of eliminating nonessential governmental expenses in connection with the raising of revenue through taxation. And I may say frankly that, with many of the people of Arkansas, I am alarmed about the future of our Government if we continue to increase and increase taxation. My fear, however, and the fears of those whom I represent is not the fear of the taxpayer because of high taxes alone but a genuine fear least our capitalistic form of government be destroyed—a form of government which has given the best living conditions any generation of mankind has ever enjoyed.

Gentlemen, the entire history of nations and especially the economic history of nations during the past 25 years, shows that we, the people of the United States, are headed directly toward three steps, which occur in the following order—inflation, socialism, and the worst type of dictatorship. Unless the proper initial steps are taken by your committee and the Finance Committee of the United States Senate and the Appropriations Committees of the two Houses, it is my sincere belief that the people of this country will witness these events.

First. All savings, all property which today has a dollar value, all life insurance and annuities, in fact, everything upon which we have depended to make us financially independent when we grow old, will either be wiped out completely or will be worth only a fraction of its present value. This happened in Germany, France, Italy, and Russia.

Second. Following this or coincident with it, we can expect a socialistic form of government. Individual initiative, private ownership, the stirring of ambition through financial incentive, all of these and many other of our cherished ideals will no longer exist. This happened in German, Italy, and Russia. Although France did not completely give up the capitalistic system, the extent to which socialists controlled the government was sufficient to prevent proper defense preparedness and in the opinion of many was largely responsible for losing the war. No secret is being made of the fact that the present Government in England is expected to be exchanged for socialism. According to press reports, it is considered today by English leaders as having fewer evils than the other after-the-war possibilities. While it is true that Great Britain's leaders are being forced to look upon future socialism with complacency—with the thought that no other desirable alternative exists for them—it does not follow that the United States must likewise accept this philosophy. Whether or not we are forced to later on depends upon the steps taken now (before the 1941 tax bill is completed) by your committee and the Senate Finance Committee.

Third. In Germany, Italy, Russia, other smaller countries, and now in France, the inflation which led to socialism then led to dictatorship. This statement is so self-evident that it needs no explanation.

I shall endeavor to explain first, why we are headed toward these three steps and then explain why I believe that its prevention depends upon what is done by your committee, the Finance Committee of the Senate, and the Appropriations Committees.

ARE WE HEADED TOWARD AN INFLATION CONFLAGRATION?

Mr. Leon Henderson told you that during and after the last World War we had a rising price and wage spiral because no attempt was made to control prices but that every effort would now be made to prevent this type of inflation. Such efforts are very important, and the administration should be commended for making the effort, but I cannot believe that the Government will be successful in preventing these price rises, while I see:

1. The continuous parade of strikes being settled by wage increases—your Mr. Robertson indicated[1] that no strike from January to March had been settled on any other basis than an increased wage.

2. Scarcity and increases in prices on some imported raw materials, such as rubber, tin, hides, wool, sugar, silk, vegetable oils, etc.

3. Corporations being forced to pay the penalty scale (time and a half, I believe) for more than 40 hours per week, when a 40-hour week, in defense industries, is suicidal.

4. The great probability of corporations following the example of luxury and waste which the Government itself sets before them, instead of paring all unnecessary expenses to the bone.

No, gentlemen; if these things are to continue (and I have seen no certainty of their discontinuance—have you?), prices will rise.

This price-rising type of inflation, however, is not the form of inflation which I fear most. The type which I dread to think of is that which completely wiped out German currency and eliminated four-fifths of the value of the franc. Dollar devaluation may be achieved by different methods in this country, but the results would be just as disastrous, and I believe that we are headed in that direction.

WHAT ARE THE INDICATIONS OF OUR APPROACHING THIS TYPE OF INFLATION?

Mr. Jesse Jones, I believe, anticipates a Federal debt of $90,000,000,000, but this is probably not the limit, as about every 6 months the published estimated needs of bombers, ships, tanks, men, and other war material are increased. If he estimates $90,000,000,000 today, the estimate next year will probably be much higher. We also already have other governmental debt (not Federal) of $20,000,000,000.

Now, honestly, gentlemen, how do you think that we are going to pay this $110,000,000,000 or more? What do you think will happen after the war ends? Well, there will be a drop in war production of at least $20,000,000,000 per year—Mr. Leon Henderson estimated in his written report to you that by May 1942 we will be spending at the rate of $24,000,000,000 per year on defense—also several million men will be laid off employment, and several million soldiers probably will then be mustered out with few jobs available. Is it then that we will begin to reduce the billion dollars per year that we are now spending on W. P. A.? No; I expect this appropriation to be greatly increased after the war. Will our tax receipts then exceed our desires to spend to such an extent that the surplus can be used to pay off our $110,000,000,000 indebtedness? Is it not likely that there will be a strong temptation to wipe the indebtedness out through devaluing the dollar? Will

[1] P. 22 of report No. 1 of these hearings.

not some leaders explain that by revaluing the dollar at 20 cents our $22,000,000,000 of gold will increase in value $88,000,000,000, and then recommend that this $88,000,000,000 be used to reduce the indebtedness? Do you realize, gentlemen, that the interest on a $100,000,000,000 debt 5 years from now will probably be $3,000,000,000 per year, and that during the 10 years ending in 1932 the total United States Government expenses averaged less than $4,000,000,000? No doubt great pressure will be applied to wipe out this $3,000,000,000 interest charge, and the indebtedness, through dollar devaluation.

If from now until the end of the war Congress and the administration have a spendthrift, wasteful psychology, I shall expect some such suggestion to be enacted; but if every unnecessary expense is eliminated, if Congress and the administration are just as much interested in eliminating waste as they are in raising revenue, this need not happen.

WHAT ARE THE FACTS AND WHERE ARE WE HEADING?

First. Government officials are reluctant to recommend or discuss specific reductions. When Mr. Eccles, Chairman of the Board of Governors of the Federal Reserve Board, testified here last week, he was unusually well informed regarding various methods of raising money through taxation, but he seemed to be unable to furnish any information regarding the amount of unnecessary nondefense expenses existing or any methods of reducing them. For example, Mr. Eccles presented a complete schedule of individual income-tax rates, also detailed suggestions regarding estate tax, gift tax, excise tax, excess-profits tax, and methods of closing loopholes; but, although questioned repeatedly, he was not able to specify a single expense item that could properly be reduced. He must have studied the subject, because he had previously made some general recommendations regarding it at the United States Chamber of Commerce meeting.

I regret that the intelligence which so ably furnished information on the many methods of raising revenue was not able to present one specific recommendation for reducing unnecessary expenses, although Mr. Morgenthau, another official, had previously stated,[2] "If the matter were very carefully examined, we believe it is possible to reduce the total (nondefense expenditures) by $1,000,000,000."

Mr. Leon Henderson, whose ability I greatly admire, also was not very helpful in suggesting specific reductions, although he discussed many items not usually associated with his office, such as gift tax, estate tax, life-insurance exemptions, etc.

Second. Unnecessary and unjustifiable nondefense expenses are increasing. In December 1940 there were 285,731 young men in the C. C. C. A month later there were 298,159.[3] Think of it, gentlemen, while drafting men in the Army and seeking volunteers for the Navy, we are actually increasing the C. C. C. enrollment of men of draft age. (C. C. C. has been budgeted at $265,000,000 for 1942.) As each enrollee costs the Government about $1,000 per year, this would represent an increased cost of twelve and one-half million dollars per year for the 12,428 men enrolled in January over the total enrollment as of December 31. Why is it so difficult for our Government experts to recognize that this expense can, and should be, reduced?

Third. I have estimated that between one and two billion dollars of nondefense items can be eliminated from the Budget, details of which will be given later.

Gentlemen, I am not an economist, banker, mathematician, tax expert, nor student of the law, but I believe that common ordinary horse sense will enable anyone to see that you can't pay off $110,000,000,000 as long as these conditions continue, except, of course, through the dollar devaluation type of inflation which has been so disastrous to European countries during the past 20 years. If we are to avoid this catastrophe a different type of thinking must be developed among Government officials. They must be just as deeply interested in reducing expenses and in pruning waste as they are in raising increased revenue.

REDUCING EXPENSES

This is a subject with which I have had considerable experience. Although Harding College has no endowment, and no State financial assistance, you can send four boys through Harding College for what the Government spends on one C. C. C. boy, provided the student works about 1 hour per day. This comparison may not be absolutely fair, because of the $1,025 cost for each C. C. C. enrollee in the 1940 fiscal year, $360 was paid to him. The costs, other than the $30 per month paid to the enrollee, totaled $665. This is more than enough to send two boys through Harding College, provided they work an hour a day. Why are we able to do this? We have learned how to eliminate every unnecessary expense, and we are making real sacrifices to enable these 500 poor young people to secure educations. Gentlemen, I sometimes wonder what you think, when the representative of a multimillionaire or a luxurious corporation comes before you and asks for governmental economy? Don't you often think that they are inconsistent? That cannot be true with us, however. We have, and have had, Ph. D.'s on our faculty receiving only $1,200 per year, who turned down offers elsewhere of $4,000 and more. They make these sacrifices to enable our poor young people to secure an education. Our highest salary today is $1,800, and yet our students, in competition with students of other colleges, have won the highest awards in the great majority of the contests.

I managed a school in Canton, China, for several years, raised and expended all the income, and there I learned the value of a tenth of a cent. So, gentlemen, when I say that I have had considerable experience in pruning unnecessary expenses, please do not think that I am boasting or that I am a theorist. I have estimated that if our governmental departments make the same revenue sacrifices which are being asked of all taxpayers approximately $2,000,000,000 can be saved, as follows:

	Millions	*Millions*
Items that probably can be eliminated during the emergency:		
C. C. C.	$265	
N. Y. A.	99	
Soil conservation	500	
Federal aid to roads	180	
Total		$1,044
Items which can probably be cut in half during emergency:		
Rivers, harbors, and flood control[1]	$121	
National park improvements	10	
Agriculture, forests, and trails	10	
Rural rehabilitation	66	
Food stamp	100	
Export bounties	100	
Last year's appropriation for W. P. A. (Will not the $20,000,000,000 defense program cut unemployment at least in half?)	1,325	
Total	1,774	
One-half is		$887
Items the total of which can probably be reduced 25 percent:		
Agriculture departmental expense (in addition to agriculture aids)	$114	
Department of Commerce	31	
Department of the Interior	70	
Department of Justice	55	
War Department — nonmilitary activities	45	
Miscellaneous independent offices	66	
Refugee relief	18	
Total	[2] 399	
One-fourth is		100
Grand total		2,031

[1] For several generations it has been assumed that this item contains "political pork." I believe that it is possible to reduce it.

[2] Congress used for franking in 1928, $845,000; in 1940,: $737,000. Departments used for franking in 1928, $6,000,000; for publicity and franking in 1940, $39,000,000. I understand that professionals are employed to prepare radio scripts and movie films and that the most luxurious types of publicity are included.

[3] I do not know what cuts could be made in these items. Some may need to be increased. It would be strange if a close scrutiny did not result in finding $100,000,000 that can be suspended during the emergency.

May I repeat that if your committee does not take some such step as recommended by Congressman DISNEY,[4] page 13, report No. 1 of these hearings, or unless the same results are achieved by other methods, we are approaching catastrophic inflation.

SOCIALISM

When the value behind the capital owned by capitalists in Germany was wiped out, it was easy to take the next step which resulted in socialism. I shan't take time to discuss this subject but surely you have recognized a general feeling in the air that after 5 or 10 years of war there is likely to be some controlling form of socialism in England and in the United States. There is a drift in that direction. Just the other day a high Government official indicated in his testimony here that the estate tax should be used to prevent a man from passing property to his children. Socialism and communism teach that. They would like to see all inheritances prevented and they want the death tax rates used primarily to prevent your having the right to leave anything to your children. Capitalism would increase estate-tax rates because the Government needs the money, but when our Government refuses to admit that such family obligations exist after death and when it uses the tax primarily to prevent you from passing your property to your family, then instead of capitalism, we will be copying from communism and socialism, from that form of government which in Russia and in Germany teaches that the family unit and the family religion must be destroyed because it is the state's greatest enemy. Gentlemen,

[2] P. 13, Rept. No. 1 of your hearings.

[3] P. 7, Employment and pay rolls, January 1941.

[4] "There is nothing on earth to keep this committee from including in a tax bill a list of repeals of appropriations. We might have some trouble getting a rule on that, but it can be done if we want to do it."

if our dollar, like the French franc is devalued to one-fifth of its present value, the change from inflation to socialism will then be almost a certainty, and just as night follows day, dictatorship will be the third step but it is in your power to prevent even the first step.

CONCLUSION

I hope you will not think that any of my illustrations are extreme. To me, the questions involved are extremely serious and the danger very real. We can avoid inflation and the evils which follow it, provided the first steps are taken before the House passes the 1941 tax bill that you are planning to recommend. We are at the crossroads—where will we be 5 or 10 years from now? That depends upon whether we continue drifting toward the three disastrous steps I have pictured or whether we change our course. In all seriousness I say, "May God help you."

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

Mr. LAMBERTSON. Mr. Speaker, the forgotten man is Joe Kennedy.

An extensive poll in Indiana shows 7 percent for convoys and 5 percent for war.

Send Hoover, the only living ex-President, to Berlin as a messenger for peace.

The thought that Germany might crumble from within furnishes a reason why we are not needed.

Even Grace Coolidge has been lifted from cloister to lead the Freedom to Fight Committee.

There should be an Executive order against fireworks on this Fourth of July out of sympathy to England.

If we are dragged into the war when over 90 percent of the people are opposed to it, then democracy has failed here.

If we had stayed neutral, we might now have been the instrument for peace. Peace now would be a blow to communism.

We have a tradition of voting $2,500 for painting the picture of every Speaker of the House, even while living.

The 46-year-old Hess, who flew the North Sea alone, then inverted his plane and parachuted out, has raised the stock of us old men.

Harry Hopkins, our No. 3 man, was flown over the Atlantic to the same island and has done a lot of other flying alone upside down.

Andy Smith, 86, worked on the CONGRESSIONAL RECORD 67 years without retirement or luxurious quarters. He recalled John J. Ingalls' coming to the Senate.

The president of a small college in Arkansas told the committee preparing the tax bill how to save $2,000,000,000 per year. He was called a remarkable witness.

The visit of Lord Halifax to Kansas City had for its main purpose getting our boys in the war over there, and yet apparently he had a lot of attention.

Aid for Great Britain and the Defense of America

EXTENSION OF REMARKS

OF

HON. JOHN S. GIBSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

RESOLUTION OF LEON MARTIN POST, NO. 25, AMERICAN LEGION, BARNESVILLE, GA.

Mr. GIBSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Leon Martin Post, No. 25, of the American Legion, at Barnesville, Ga.:

Whereas our country is definitely committed against an Axis victory and in favor of a victory of Great Britain and her allies; and

Whereas should the Axis governments emerge victorious in the present war, they will hold us accountable for this policy and we would be faced with a military or economic war, which we would have to fight without benefit of allies or the British Navy; and

Whereas the British Empire is fighting for everything we hold dear in life, including the rights of life, liberty, and the pursuit of happiness; and

Whereas Germany, on the other hand, is determined to force enslavement of mankind upon the whole world and to insure sufficient future Germans to rule as masters of mankind, Germany is now raising a nation of illegitimates; and

Whereas it is a foolish and most unwise policy to allow our armaments and supplies that are so badly needed by England as well as by ourselves to be sunk before reaching their destination; and

Whereas as ex-service men, many of whom fought overseas, we feel that the prevailing idea of refusing to do our duty because we do not want American boys to fight except at home is a snare and a trap, because American soldiers had rather fight on foreign soil than to have their native land destroyed by modern-day methods of warfare: Therefore be it

Resolved by the Leon Martin Post of the American Legion of Barnesville, Ga., as follows:

(1) That the policy of the national department of the American Legion advocating the use of whatever means needed to insure safe and immediate delivery to England of the armaments and supplies shipped her be, and the same is hereby, approved.

(2) That Congress be urged to cease needless debate and to act without delay on all important legislation since idle talk during this crisis will only hurt America and her people.

(3) That conflicts between labor and industries be decried and strikes be condemned and the Government be given the power to take over those industries that refuse to submit labor controversies to arbitration.

(4) That all unfriendly aliens in this country be interned to prevent them from engaging in subversive activities.

(5) That those of our citizens whether "fifth columnists," isolationists, or "copperheads" who are now, after America has decided her course, trying to deter us in our efforts and in that course by preaching a doctrine of defeatism which can only give comfort to the aggressor nations, our national enemies, be condemned in no uncertain terms.

(6) That a copy of these resolutions be sent to the President of the United States, copies to Members of Congress from Georgia, a copy to the national headquarters of the American Legion, and a copy to the press.

Adopted by Leon Martin Post, No. 25, on May 8, 1941.

JOHN M. HOWARD,
Commander.

MARKEY B. SMITH,
Adjutant.

The Farm-Labor Shortage

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

RESOLUTION OF POPE COUNTY FARM BUREAU ASSOCIATION

Mr. H. CARL ANDERSEN. Mr. Speaker, I would like to call to the attention of the House the serious problem in the making as regards farm labor. The following resolution adopted by the Pope County Farm Bureau Association in my congressional district serves warning of what is to come in the near future:

Whereas agriculture is a basic industry essential to national defense and there is an urgent need for stimulation in the production of certain foods such as dairy products, eggs, poultry, and pork;

Whereas there is becoming a threatening shortage of competent farm laborers because of the Selective Service drafting young men for military training from the farms: Therefore, be it

Resolved by the Pope County Farm Bureau Association, That this organization go on record favoring the deferment of men employed on farms or operating farms.

POPE COUNTY FARM BUREAU ASSOCIATION.
JOHN JACOBSON, *Secretary.*

Report on Fort Devens, Mass.

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

Mr. ENGEL. Mr. Speaker, Fort Devens is situated near the town of Ayer, Mass. It was a World War training camp with a

World War capacity of 36,832 men who were cantoned in 1,334 buildings. The total area of the World War camp was 10,607 acres according to the War Department records. The present project provides for 1,031 buildings which will house 24,296 officers and men.

COST

The original cost of this project was estimated at $12,474,061. This was a fixed-fee job. The latest field estimates that I have give the final cost when complete at $25,188,943, leaving a deficit of $12,714,882.

SITE

While the total area of the World War camp was 10,607 acres, the amount of land acquired up to March 1, 1940, was 15,000 with a thousand more acres to be acquired. The site is fairly well located. Practically the entire World War building area was used for either the permanent or temporary post which is being erected. The site is medium hilly, but not so as to require excessive grading costs. I have a contour map which shows that the buildings are located on fairly level land. The engineer's report to me shows that 23 miles of road was constructed and that road grading involving the removal of approximately 500,000 cubic yards of dirt was necessary.

LUMBER

Up to March 12, 50,000,000 feet of lumber was purchased, 44,000,000 of which was purchased by the Army and 6,000,000 by the contractor. The average price paid for the first 32,000,000 feet was $40.79 per thousand. The average price paid for all lumber was $41.86 per thousand board feet.

INSPECTION OF LUMBER

All lumber and material was counted or tallied by the contractor and rechecked by the construction quartermaster as it was unloaded from the car. In case of difference it was rechecked. All lumber was inspected as to quality and moisture content by the contract engineer and construction quartermaster. No moisture testing machine was used except in cases of disagreement. The lumber was up to grade and in some instances above grade.

SALVAGE

All forms were moved from building to building or area to area until worn out. Surplus lumber and material was hauled from a completed building to the next building site and no lumber was hauled to the dump that could be used on a building. The dump or salvage pile was worked over once and lumber usable for benches, tables, and so forth was salvaged and turned over to the camp quartermaster.

EQUIPMENT

The total value of all equipment used on this job was $1,525,000 of which $475,000 worth was owned by the contractor and $1,050,000 worth was owned by a third party. The amount of rental paid to March 1 was $610,500 or approximately 41 percent of its value. The Associated General Contractors' rental scale was used for all except the 13 bulldozers which were rented for a time. The usual recapture clause permitting the Government to take over any equipment they desired, applying the amount of rental paid against its appraised value, was contained in the contract.

INSPECTION OF EQUIPMENT AS TO FITNESS

Equipment was inspected as to fitness for use before rented by the contractor's mechanic and rechecked by the construction quartermaster's mechanics.

INSPECTION AS TO USE

The time of the operator of the equipment was checked four times each day. Each piece of equipment was numbered and checked four times each day in the same manner that the men were checked. All equipment and trucks remained on the job and no equipment was permitted to be removed from the reservation except the trucks that were on duty outside the reservation. Broken-down equipment was immediately sent to the repair shop where a record was kept and the time was checked to make certain that no rental was paid on equipment while under repair.

LABOR

This project employed 15,225 men at its peak, of whom 4,002 were carpenters and 7,424 were laborers. The contractor states that approximately 95 percent of the men who were paid carpenter wages were actually carpenters. He further states that 1,500 of the carpenters employed had worked for him prior to this job. The wage scale of the skilled and unskilled labor which did the larger part of the work was as follows:

	Original wage scale per hour	Increase
Asbestos workers	$1.50	
Bricklayers	1.50	
Carpenters	1.12½	$1.25
Cement finishers	1.50	
Electricians	1.12½	1.50
Laborers, unskilled	.58	.65
Machinists	1.25	
Mason tenders	.85	
Painters	.80	
Pipers	.65	
Plasterers	1.50	
Plasterer tenders	.90	
Plumbers	1.20	1.50
Steamfitters	1.20	1.50
Truck drivers:		
½ ton or less	.65	.68
Over ½ ton	.70	.71

POWER SAWS

The contractor had a central mill where the frames were fabricated. Sixty men worked at this mill. They also had power hand saws and gasoline table saws on the job.

OVERTIME

The sum of $1,350,000 was paid as premium for overtime, representing 5.3 percent of the total cost of the job. By premium I mean money paid out for services which were not actually rendered. A man working 48 hours in any 1 week where the 40-hour week was established would draw 56 hours pay if double time were given for overtime while he actually rendered only 48 hours of service. What I mean by "premium" is the money paid for the time over and above the 48 hours straight time, or 8 hours for which he was paid and did not render any service.

OVERHEAD

First. Army: 11 percent of $25,188,943, or $2,770,783. This included: (a) Camp construction quartermaster cost, as follows:

1. Pay rolls	$141,375.13
2. Telephone	1,277.38
3. Supplies	13,894.01
4. Auto expense	5,776.05
5. Miscellaneous	85.00
Total	162,407.57

This equals sixty-four one-hundredths of 1 percent.

(b) The Army overhead of 11 percent also includes the fixed-fee and contract-engineer expenses up to March 1, which were as follows:

Pay roll and social security	$123,405.70
Telephone	172.75
Office supplies and field equipment	17,304.04
Auto expense and rental	2,288.16
Miscellaneous	1,736.92
Total	154,907.60
Fixed fee—paid	26,172.00
Total	181,079.60

Second. Contractor's overhead: The following is a statement of the contractor's overhead:

Administrative salaries	$923,166.13
Office expense	141,273.92
Auto expense	10,552.10
Telephone	16,049.52
Total	1,091,041.67

The engineering expenses charged against the Army overhead included social-security taxes, which strictly are not a part of overhead. I do not have the amount of social-security taxes charged against the engineering expenses, but in view of the fact that the contract engineer's pay-roll item including the tax was only $133,504, it could not have been very large. It will be noted that after deducting the camp construction quartermaster's overhead and the contract engineer's overhead—the two items aggregate $343,486—it left to the Army $2,427,297 to pay contingent expenses and overhead other than the overhead incurred in the field.

Third. Insurance and taxes: The contractor paid out the following amount for insurance and social-security taxes:

Insurance	$270,948.21
Social-security taxes	333,474.73
Total	604,422.94

OVERHEAD, INSURANCE, AND TAXES

Summarizing the overhead, taxes, and expenditures, we have the following:

Total Army overhead of 11 percent, including contract engineer's and construction quartermaster's overhead	$2,770,783
Contractor's overhead	1,091,041
Insurance	270,948
Social-security taxes	333,474
Total	4,466,246

When we add to this the sum of $1,350,000 paid out as premium for overtime we have to charge against this project a total sum for the above items of $5,816,246, which represents neither equipment, site, labor, nor material.

RAILROADS

Six thousand six hundred and eighty-two feet of railroad track was built, which is 95 percent complete. The cost to date has been as follows:

Labor	$23,567
Overhead	4,713
Material	12,371
Equipment	7,678
Total	48,329

Ninety-pound relay rail was used. The Boston & Maine Railroad Co. furnished the material and the contractor did the work.

UTILITIES

The original estimate of the cost of the utilities made in Washington on this project was $1,064,000. The estimated completed cost is $4,325,000. The above utilities included 24.6 miles of water piping, 18 miles of sewer lines in addition to 5.8 miles of existing sewer lines. The utilities also included 23.2 miles of electric distribution lines. Thus it will be seen that the actual cost of the utilities will be more than four times the original estimate.

QUALIFICATIONS OF ARCHITECT-ENGINEER

The architect-engineer was Frank A. Barbour, of Boston, Mass. Mr. Barbour is one of the outstanding engineers in the East, being past president of the American Water Works Association, the New England Water Works Association, and the Boston Society of Civil Engineers. He is also past director of the American Society of Civil Engineers and the American Society of Testing Materials. He has had 35 years of private practice, mainly municipal engineering. He was supervising engineer to the construction of the World War camp at Fort Devens in 1917.

QUALIFICATIONS OF CONTRACTOR

The contractors were Coleman Bros. Corporation and John Bowen Co. of Boston, Mass. Coleman Bros. have been in the construction business as a general contractor for some 45 years, while John Bowen Co. has been in existence both as a partnership and corporation for 25 years. The officers of both companies have been with them from 13 to 25 years.

PRINCIPAL FACTORS AFFECTING COST

The principal factors affecting the cost are as follows:

First. Overtime: Work began October 20, 1940. Predominating instructions were that a completion date of January 15, 1941, must be met. Facing New England winter conditions, the contractors' force worked three shifts, 7 days per week from the start up to February 3; two shifts, 7 days per week to February 17; two shifts, 7 days per week to February 22; and one shift 5 days per week from February 22 to date.

Wages:

	Hourly rate	Overtime ratio	
		Saturday	Sunday
Common labor	$0.65	1½	1½
Carpenters	1.25	1½	2
Equipment engineers	1.375	2	2
Equipment mechanics	1.625	2	2
Electricians	1.50	2	2
Plumbers	1.50	2	2

Floodlighting for night work has cost approximately $200,000.

Likewise subcontracts were let on the understanding that the subcontractors would work overtime, some subcontractors figuring as high as 35 percent additional labor cost for overtime.

Total cost to general contractors of overtime labor above the day hour rate approximates to date $1,350,000.

Second. Comparative inefficiency of rush work: Inevitable reduction of efficiency due to manning of work for progress necessary to complete at specified date.

Comparative inefficiency of night work: Substantial disorganization of carpenter crews due to failure in delivery of lumber ordered in Washington. For many weeks a shortage of 10,000,000 board feet existed.

Third. Broken topography of site: Large volume of earth necessary for acceptable placement of buildings—due to broken topography. Probably 400,000 cubic yards moved for such placement of buildings. No actual record. Excessive cost of such work due to freezing of soil to depths of 12 to 30 inches—starting about 1 month after beginning of work (October 20). From about November 20 onward temperatures have generally been below freezing with minimums in November of 9 degrees, December of 2 degrees, January, 0, and so forth.

Fourth. Effects of low temperature: Probably one-third of all earthwork handled has been frozen. Approximately 100,000 cubic yards of earth frozen in large masses have been deposited in spoil banks and new soil obtained from deep borrow pits for back filling.

In a large percentage of the buildings with concrete foundation walls and concrete floors, the interior earthwork froze before the concrete floor could be placed—requiring removal and back filling with earth from borrow pits.

The cost of concrete has been substantially increased by low-temperature conditions due to the necessity of covering and the use of salamanders.

High early cement, calcium chloride, and heated water have been used in practically all concrete work.

Fifth. Excess cost of lumber (average price $42 per 1,000 feet b. m.).

Sixth. Summary of major conditions affecting cost: The general contract was awarded October 14, 1940—the work started October 20—with a paramount requirement that the project be completed January 3 (later January 15, 1941).

Thus a normal two-season job was required to be done in 90 days—two-thirds of which period came within the low-temperature conditions of a New England December and January.

Such completion proved impossible, even with 24-hour operation, and the work has continued through the winter with all the cost-affecting factors of low temperature.

Aside from the effect of winter conditions, the broken topography and the length of water, sewer, electric lines, and roads resulting from the distant location of certain regiments and the hospitals made the original cost, as estimated in Washington, of small significance when applied to this camp site.

RATIO OF LABOR TO MATERIAL

The weekly report for Fort Devens dated March 8 shows the following:

Accumulated expenditures plus obligations for labor	$9,325,906
Accumulated expenditures plus obligations for other than labor, including construction quartermaster's overhead	8,848,084
Total accumulated expenditures of all kinds plus obligations to March 8	18,173,990

On this basis the ratio of labor to material and other expenses was: Labor, 51.3 percent; material and other expenses, 48.7 percent. The contract engineers seem to vary in their methods of computing the ratio of labor to material and other expenses. In this case the contractor estimated the ratio of labor to material: Labor, 68 percent; material and other expenses, 32 percent. However, I have adopted the above method and taken the figures from the weekly report in order to have a uniform method for the purpose of comparison.

CLOSED SHOP

This was a closed shop. I was informed that the carpenters' union charged initiation fee of $65; labor, $40; and so on down the line. The carpenters' union required the payment of $10 a week and common laborers' union $5 a week until the initiation fee was paid. The project manager representing the contractor informed me that no one was turned down, as far as he knew, for work because he did not have the amount of the fee. He stated they had no labor trouble of any kind.

SUMMARY

Site: Fort Devens was a World War training camp situated near the town of Ayer, Mass. The entire World War building area was utilized, together with the utilities that were usable.

Cost: This was a cost-plus-fixed-fee job. The original estimate was $12,474,061. The actual cost will be $25,188,943.

Capacity: During the World War 36,832 men were housed in 1,334 buildings. The present project will provide for 24,296 officers and men, who will be housed in 1,031 buildings.

Lumber: Fifty million feet of lumber was purchased. The average price paid for all lumber was $41.86 per thousand.

Equipment: $1,525,000 worth of equipment was rented; $475,000 of this equipment was owned by the contractor; $1,051,000 by a third party; $610,500, or approximately 41 percent of the value of the equipment, was paid in rental up to March 1.

Labor: Fifteen thousand two hundred and twenty-five men were employed at the peak, of whom 4,000 were carpenters and 7,424 were common laborers. According to the contractor, 95 percent of the men who were paid carpenters' wages were actually carpenters. The wage scale of the crafts that did the most work was as follows:

	Per hour
Carpenters	$1.25
Electricians	1.50
Unskilled labor	.65
Painters	.80
Plasterers	1.50
Plumbers	1.50

Overtime: $1,350,000 was paid as premium for overtime, representing 5.3 percent of the total cost of the job.

Overhead: The 11 percent Army overhead on this project amounted to $2,770,783 of which $162,407 was paid to maintain the camp construction quartermaster's office and $181,079 was paid as fixed fee and overhead cost of the contract-engineer in the field. This left approximately $2,427,300 for the Army overhead at Washington. The contractor's overhead including administrative salaries, office expense, and so forth, amounted to $1,091,041 while $604,422 was paid for insurance and taxes. Five million eight hundred and sixteen thousand two hundred and forty-six dollars, or nearly 47 percent of the original estimate of the cost of the job, was paid out for overhead, overtime, insurance, and taxes.

Utilities: The original estimated cost of the utilities on this project was $1,064,000. The actual cost will be $4,325,000, or four times the amount.

Lumber shortage: Failure of the Washington office to deliver lumber ordered disorganized carpenter crews and added to the cost of the project. For many weeks a shortage of 10,000,000 board feet existed.

Ratio of labor to material: The total accumulated expenditures plus obligations to March 8 was $18,173,990. Of this $9,325,906 was labor and $8,848,084 was expenditures and obligations for material and expenses other than labor. On this basis the ratio of labor to material was labor 51.3 percent, material and other expenses 48.7 percent.

I Have Faith in the Youth of America

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

LETTER FROM DR. LEROY T. LAASE

Mr. CURTIS. Mr. Speaker, there are five colleges in my district. Whenever the opportunity arises to visit the campuses of the colleges, I love to do so. It has been my observation that the young men and women in our colleges are thoughtful, sincere, intelligent, resourceful, and patriotic. I wish to further extend my remarks by including a letter from Dr. Leroy T. Laase, of the University of Nebraska, which bears out my contention:

THE UNIVERSITY OF NEBRASKA,
Lincoln, May 2, 1941.

Congressman CARL T. CURTIS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CURTIS: Last evening I had the privilege of being one of the judges, along with Supreme Court Judge Bayard Paine and District Judge Harry Landis, of the oratorical contest on the Bill of Rights sponsored by you for students in the colleges of your congressional district. I cannot resist writing at once and telling you that I was well pleased with what I heard and saw in that contest.

You would have been thrilled, I am certain, by the work of these young people in the contest. Some had superior manuscripts and others were superior in delivery, but all were sincere and doing some very constructive thinking. As would be expected, there were divergent points of view.

One of the speeches which particularly appealed to me was the speech of a German-Jewish refugee which developed the theme that after you had lived in Germany you really can appreciate the privileges of the Bill of Rights. As would be expected, his delivery was rather inferior, but the speech had a tremendous appeal and came from the heart.

Another speech which particularly appealed to me was the speech of a young man defending the rights of a conscientious objector. It was a rather bold stand and he might have done a better job of tying up his case to specific clauses in the Bill of Rights, but he was a Quaker and spoke with a tremendous amount of sincerity. His style and composition was easily the best, in my opinion, and his delivery was superior.

Another student, a young lady, likewise chose a rather bold stand. She cited considerable evidence to show that in our wartime hysteria, freedom of speech, freedom of worship, freedom of assembly, and freedom of press were all being suppressed somewhat. Her manner of composition was unnecessarily antagonistic when she might have been more conciliatory and her manner of delivery was a bit too belligerent, but she spoke with great conviction, and one could tell that she had done considerable reading and studying.

Another young lady did a fine piece of work in taking somewhat the opposite point of view, namely, that it might be necessary for us to sacrifice certain of our individual liberties during the immediate national crisis in order to defend and maintain the ultimate privileges of the Bill of Rights. She had a very superior delivery.

The manuscripts of the other two students were more ordinary, as were their deliveries. In view of the divergent points of view and variations in delivery, it is not surprising that there was some difference of opinion among three of us judges as to which student had done the best work. On one thing we were all agreed, namely, that all six of the contestants were quite equal in ability and all did a creditable piece of work.

Whether or not one is inclined to disagree with the point of view expressed by some of the contestants is to me not important. To me the important thing was that these young people were standing on their own feet expressing ideas that were the results of their own thinking about principles in which each believed, and in so doing were exercising the right of free speech and the right of free assembly—two of the great privileges of the Bill of Rights—which would not have been possible for them in certain nations of the world at this time.

I think that it is fine of you to sponsor this event. I hope that you will see fit to continue it another year. I wish that other Congressmen might see fit to do the same for the young people in their congressional districts.

Very truly yours,
DR. LEROY T. LAASE,
Acting Chairman, Department of Speech and Dramatic Art, University of Nebraska.

Little Missouri River Dam, Reservoir, and Channel Improvement Project—Calion, Ark., Flood Control Project

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

STATEMENT BY HON. OREN HARRIS, OF ARKANSAS

Mr. HARRIS of Arkansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein statements I made before the Flood Control Committee of the House on Wednesday, May 14, 1941, in behalf of the Little Missouri River, Ark., flood-control project and the Calion, Ark., flood-control project:

Mr. Chairman, I appreciate the privilege of appearing before your Committee on Flood Control in the interest of the Little Missouri River Arkansas project, a project of special importance to the people in the Little Missouri River Basin, and one of tremendous importance in the development of that region, first, because of the enormous need and necessity for flood control on this river and its tributaries; second, because of the need of additional power that Narrows Dam would give to the development of the strategic minerals in that particular area, and also electric power for the people who have heretofore been denied the privilege and benefits.

I have made quite a study of the justification of this project, and also I have a personal knowledge and familiarity with the need of this program, because I was born and reared in Hempstead County, only a few miles from this river basin. The area affected contains more than 2,000 square miles and some 132,000 acres of the richest farming land in the Southwest. I have seen all this territory flooded year after year, destroying all the efforts and labors of the people who were attempting to farm the land and maintain their homes. It is a treachercus stream, with usually heavy rains in the spring that quickly flood the entire basin, devastating and destroying what otherwise would have been fruitful years of farm production. In passing, Mr. Chairman, may I state that this river is now flooding this entire area, making it almost impossible for that land to be utilized during this year. In my lifetime I have observed the increased need of the project, especially from a flood-control standpoint, and recently for power development. This is not a new idea, and the Federal Government has recognized the justification and consideration of this project from a flood-control standpoint since 1872, a short time after the Civil War. It was then that the Government spent some money for channel clearance to relieve the destructive floods, but since then the river bed and the main streams have gradually been filled and clogged to the extent that the water is not permitted to have average flow, and therefore the need for this development has increased in the past few years.

The people who live in the area have attempted to protect themselves and their property by constructing canals on Terre Noire Creek, one of its main tributaries.

Some years ago, they organized a drainage district and constructed hillside floodways on each side of the valley. This included a canal 16 miles long with a levee constructed to take a portion of the headwater flow, together with the inflow from the adjacent hills and return to the main stream below the protected area. On the other side on the Ozan Creek, canals were constructed on the south and middle forks and recently people attempted a pilot channel for a canal on the north fork through the assistance of Federal-relief funds. However, these improvements have proven inefficient and have worked to even greater detriment in that they were not in a position to complete a job that was started. They have done their best in trying to save this rich farm land, but have gone about as far as they can.

To give some idea about this river basin and its importance, I would like to briefly state that it has its source in Polk County in the extreme western part of the State and flows in a southeasterly direction for about 150 miles, where it runs into the Ouachita River. The upper basin is in the mountain with rugged plateau areas and the streams are deeply entrenched in extremely narrow crooked valleys. After leaving the plateau area, the river enters a coastal plain, with a flat valley some 5 miles in width.

The population affected is estimated at approximately 150,000. However, it is somewhat smaller now because of the increased floods preventing progress and development, affecting even the gently rolling uplands and along the valleys.

The agricultural activities consist of general farming and fruit culture in this area, and industrial activities include sawmills, cotton gins, preparation and processing of fruits, and mining.

Of the 96,400 acres along the main river subject to overflow, 37,700 acres are cleared. Of the 25,000 acres along Terre Noire Creek, a tributary on the north, 11,500 acres are cleared and the 10,600 acres along Ozan Creek, a tributary on the south 6,500 acres are cleared.

The flood losses consist of crop damage and loss due to delayed planting of crops. The losses from floods have an average annual damage estimated at $160,000. I want to emphasize the fact that what has been in the past and could be in the future with proper flood control, the most productive and finest agriculture lands in our entire Nation, are now of very little benefit to our people.

POWER BENEFITS

Before this committee in April 1940 the Honorable Leland Olds, Chairman of the Federal Power Commission, testified to you in behalf of this project, as follows:

"I have referred to the proposed Narrows project on the Little Missouri River in Arkansas. This project has been recommended for construction by the Board of Engineers for Rivers and Harbors as a dual-purpose, flood-control, and power dam and reservoir. A need exists for flood control in the valley of this river. The district engineer, who made the study of this problem for the War Department, found that it would not be economically feasible to construct the Narrows Dam for flood control alone; that the annual charges would exceed the annual benefits by more than $20,000. Studies by the district engineer, by the Board of Engineers for Rivers and Harbors, and later by the staff of the Federal Power Commission show that if the Narrows Dam is constructed for both flood control and power the annual benefits would exceed the annual charges by a very substantial amount. Under this plan there would be no reduction in the provisions for flood control. As a matter of fact, at multiple-purpose projects the provisions for power storage may very well enhance the value of the project for flood control, as there is always the chance that the most severe flood will occur during the period in which the power storage has been depleted, with the result that even greater storage is available for flood control than in a project built for flood control only.

"Getting back to the Narrows project, this would be a case where the sufferers from floods would be denied relief unless power was made a part of the project."

The Narrows Dam would be a few miles above Murfreesboro, in Pike County, and would have a reservoir with a gross storage capacity of 410,000 acre-feet and with maximum power pool at elevation 547 feet. This would control the headwaters of this basin, and, with the channel clearing on the main river and the two tributaries below, would completely harness the Little Missouri River Basin. It would give an initial power installation of 15,000 kilowatts, with provisions for future installation of an additional unit of 15,000-kilowatt capacity. This would make available cheap power for the development of the recently discovered minerals, particularly the cinnabar mines, from which raw material is obtained in the production of mercury. As we know, mercury is a very important product of our national-defense program, being a vital metal for explosives. Cinnabar is also found in California, Arizona, and Nevada, but 40 percent of the mercury during the years of 1935 and 1939 came from Italy and Spain. Cinnabar is found in the vicinity of this proposed power dam in great quantities, and to properly obtain the benefits from these minerals it is necessary to have electric power available.

There is within the vicinity of this territory two Rural Electrification Association cooperatives. One has already established a power line, which is now under construction and leading into this valuable area. This is for the development of the cinnabar territory; and if cheap power was available, the people in this rural territory could have the benefit of electricity in their own homes that they are now being deprived of.

ECONOMIC JUSTIFICATION

Every Department charged with making a survey and report have recommended this project. The Chief of Engineers, through the Secretary of War, the Board of Engineers for Rivers and Harbors, and the Federal Power Commission have recommended that it is economically justifiable, that a dual purpose flood control and power project at the Narrows site is an important and desirable unit in a plan to develop comprehensively the water resources of that region, that the benefits derived would exceed the losses by several thousand dollars. They recommend the Narrows Dam and Reservoir for power facilities, the improvement of channels of the Little Missouri River, Terre Noire Creek, Ozan Creek, and repairing of levees, all at an estimated cost to the United States of $6,800,000.

The Government of the United States could certainly make a good investment of this project. The great Southwest with all of the natural resources, and with which we have been blessed, is pleading for its share and equal opportunities and the people in this territory have been patient, but yet they are yearning for the opportunity that this project would afford them. The citizens and all of the people are unanimous for the construction by the Government and the development of this project and are willing and ready to cooperate in every way possible for them to do so. Mr. Chairman, I urge your committee to favorably recommend that this project be authorized.

CALION, ARK., FLOOD-CONTROL PROJECT

Mr. Chairman, I briefly want to call to the attention of the committee the importance of the proposed flood-control project of Calion, in Union County, Ark., and urge your favorable consideration in again reporting this project to the House for favorable action and inclusion in the flood-control program. This project, Mr. Chairman, was approved by this committee in the 1940 bill, which bill was never taken up and considered by the House, because of the national-defense program. I understand it is the policy of the committee to include these same projects in this year's bill, providing the Army engineers report that nothing has occurred that should alter the committee's favorable action.

The Army engineers testified before your committee that the project held its same status, and $50,000 should be authorized for flood protection to the town of Calion.

Calion, Union County, Ark., a fine little town of about 1,000 people has extremely large floods frequently. It runs up into the town, and thus the health, lives, and the property of those people are in constant jeopardy. This is on the Ouachita River, and in the last few weeks there have been two floods on that river and these people threatened with great losses.

The Government has spent some $50,000 in making a large recreational lake for fishing and other recreational facilities and the people donated some 2,000 acres in cooperation with the Government toward the construction of this very fine lake. The Ouachita River is navigable along there and Calion has become a very important center as a port. It is being rapidly developed and there is extensive oil operation in that territory. Oil is piped from El Dorado, Ark., and loaded on tank barges at Calion. There are two saw mills, and one has been established there for many years, and would be protected by this flood-control project if constructed.

The War Department reported in House Document 427, first session of the Seventy-sixth Congress, approving a plan for a levee that would circle Calion at a cost of $49,700. This is a very small sum, but it is just as important to those people as those projects which cost millions of dollars, and I understand, Mr. Chairman, that this will be the committee's recommendation to Congress and will be included in the bill.

However, I want to call your attention to the fact that the Army engineers proposed another plan, which would protect the town proper and the Lake Calion area as one unit with the means of a levee extending from the Ouachita River from the railroad embankment to high ground south of Mills Creek. They estimated this would cost $169,900. However, they say that protection for both the town and lake area at this cost is not economically justifiable at this time. I appreciate, Mr. Chairman, the very efficient and fine service the Army engineers are giving, and I realize that they base their recommendations on the ratio of annual benefits to costs. Since this report was made to Congress in July 1939 there has developed a condition with regard to the river and lake that is likely to prove most serious. There is erosion to the extent that the river is going to take in the lake, and not only will the efforts and money of the Government and the people be lost but the fine recreational facilities given to thousands of people throughout that area will be taken away from them. I believe, under the circumstances, it is worth your attention and investigation, and I should like very much to urge that this committee include in this Calion project plan No. 2 of the engineer's report that will give us that levee not only protecting the town but the beautiful lake as well.

Federal Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

STATEMENT SHOWING TAXES ON GASOLINE IN MICHIGAN

Mr. DONDERO. Mr. Speaker, under permission to extend my remarks, I herewith insert a statement showing the amount of taxes now imposed upon gasoline in Michigan. This will apply in greater or less degree to every State in the Union. The percentage of tax on gasoline will be greater in those States having a State tax of 3 cents on a gallon and less in those States having a State tax of less than 3 cents a gallon.

Before we tax gasoline and oil any more, it would be well to consider other commodities that now bear a far less burden of taxation in proportion.

The statement follows:

MEMORANDUM RE STATE AND FEDERAL EXCISE AND SALES TAX LEVIES ON GASOLINE IN MICHIGAN

On May 1, 1941, the average retail price of gasoline in Pontiac and Royal Oak was 12.6 cents per gallon at the service station, exclusive of all taxes. On each gallon, the State collected a special gasoline tax of 3 cents, which was the equivalent of a sales tax of 23.8 percent. The present 1½-cent Federal gasoline levy added another 11.9 percent to the price, which with the 3 percent Michigan general sales tax which also applies to the product, adds up to a total special sales tax on gasoline of approximately 38.7 percent.

If the Federal tax on gasoline should be increased 1 cent per gallon, it would be equivalent to another 8-percent sales tax, which would mean that gasoline consumers would pay a total special sales tax of more than 46.7 percent. This tax rate is almost 4½ times as great as that which Michigan citizens would be required to pay on such luxuries as furs, photographic apparatus, or musical instruments, if the proposed 10-percent defense taxes on these objects are enacted. It is almost 9 times as great as the proposed tax rates on candy and chewing gum.

Already the motorists of Michigan have accepted an increase in the Federal gasoline tax which was considerably greater than that imposed upon other commodities. On July 1, 1940, when the tax was raised from 1 cent to 1½ cents, the increase amounted to 50 percent. The next highest increase was 33 percent on distilled spirits, toilet preparations, and cabaret admissions. All of these are luxuries and hence not to be classified with more indispensable commodities such as gasoline, or are commodities whose consumption traditionally has been controlled through taxation. Most other tax increases imposed at this time ranged from 10 percent to 16½ percent.

Now gasoline again is being singled out for the greatest proposed increase in tax rate. If the current proposal to increase the tax from 1½ cents to 2½ cents were enacted, it would result in an increase of 150 percent over the basic 1-cent rate of the Federal gasoline tax which was in effect prior to the first defense tax increases in 1940. Only the comparable defense tax increases proposed for automotive equipment, parts, and accessories, which also are special taxes paid only by motor-vehicle operators, approach the rate of increase proposed for gasoline.

In fairness to the Michigan motorist, therefore, these facts should be carefully considered. Motor-vehicle operators in this State are now paying a total special sales tax on gasoline of approximately 36.5 percent. Michigan's 3 percent general sales tax is considered a rather heavy levy. Yet the consumers of gasoline pay a special sales tax which is 12 times as great.

No Convoys—No War

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

RADIO ADDRESS BY HON. HAMILTON FISH OF NEW YORK

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio address delivered by me over the Columbia Broadcasting System last night, May 15, 1941:

I have said repeatedly in the House of Representatives and at public meetings that I did not believe President Roosevelt would repudiate his solemn promises to the American people to keep us out of war. I am unwilling to believe that he will take any overt action, such as ordering convoys, and put us into war against the will of between 80 and 90 percent of the American people. If he does, he will sacrifice his great popularity with the people by repudiating his sacred promises to them, and by betraying them into war. Overnight President Roosevelt would become the greatest repudiator of his word in American history, and would go down in history as the President that bankrupted, ruined, and destroyed the Republic, in a war of his own making—a Roosevelt war.

The interventionist columnists and insiders have been for weeks talking openly about the sensational, destiny-making speech that President Roosevelt was to have made last night, that would proclaim the fateful decision to use our Navy to convoy British ships and inevitably involve us in war. The war-making columnists gleefully stated in the press that rough drafts of this convoy-war speech had been written 10 days ago, and that we were as good as in the war.

What caused the President to cancel the scheduled radio speech and substitute a fireside chat for May 27? I am not in the confidence of the White House, but it takes no prophet or soothsayer to figure out the real reason—public sentiment, the force of public opinion, the determined opposition of over 80 percent of the American people to involvement in war in Europe and Asia.

In the name of reason and truth, how could President Roosevelt evade or ignore the double promise he gave the American public—that "we will not participate in foreign wars, and we will not send our Army and naval or air force to fight in foreign lands outside of the Americas, except in case of attack." What could be clearer or more specific? If the English language means anything, it meant precisely what President Roosevelt intended it to mean and what the American people understood him to say.

It was a definite promise not to go to war. There were no ifs and buts or reservations, except in case of attack. It ruled out convoys on two grounds—because, according to the President, convoys mean shooting, and shooting means war, and because convoys require the use of our naval and air forces in foreign lands.

President Roosevelt was elected on this pledge, and I refuse to believe he intends to violate it and betray millions of Americans who voted for him, unless by the practically unanimous approval of the American people. President Roosevelt is my President, along with that of 130,000,000 other Americans, and I prefer to give him the benefit of every doubt until by some word or deed he repudiates his definite promises and pledges to the American people.

In the 1916 campaign Woodrow Wilson never promised to keep us out of war. It was made by campaign orators, and by posters that he had kept us out of war. Moreover, he submitted the war issue to the Congress, which voted overwhelmingly for it. There were only 50 votes in the House and 6 in the Senate against the war resolution.

That is all that the American people and the noninterventionist Members of Congress are asking for today: that the President submit the convoy issue, which Secretary Knox and Senator GEORGE, chairman of the Senate Foreign Relations Committee, both agree is an act of war, to the Congress for its decision.

I have no quarrel with any American for advocating convoys and war, but I have nothing but contempt for any Cabinet officer or any public official who has taken an oath to defend the Constitution and then seeks to put us into the blood baths of Europe and Asia through the use of convoys without submitting the issue to Congress and the elected representatives of the people in an orderly, constitutional manner, and in the American way.

There is not the slightest justification for any attempt by the President or members of his Cabinet to ignore or evade the right of Congress under the Constitution to declare war. One hundred million American citizens who are against our involvement in war have a right to be heard through their Representatives in Congress.

There can be no unity in any war if the American people are forced into it by subterfuge and deception without the constitutional approval of Congress.

If our free institutions and constitutional Government have to be scrapped to get us into war through the back door by arbitrary and un-American methods, then there can be no unity in fighting foreign dictatorships under the guise of democracy.

The issue of war or peace transcends all party lines, and is greater than either the Democratic or Republican Party, or both combined, as it affects the destiny and security of America and the safety of our people. It must be decided by the American people regardless of party considerations, on the basis of what is best for America.

I am opposed to war, as it means ruin, bankruptcy, the end of our liberties and free institutions, death and disability for millions of young Americans, blood and tears, and the advent of chaos and revolution at home and communism abroad. The day we enter the war we will have lost, although we may be victorious in 10 or 20 years, but the only real victors would be the Communists.

Capt. James Roosevelt, who is traveling around the world at the Government's expense, telling the Chinese to hold the lines until we send our armed forces to help them, and the same thing to the British in Basra and Cairo, has issued an announcement to the world that America is already in the war except for sending troops. This is a

very interesting statement to 130,000,000 Americans who have had nothing to say about it, and who were not aware that we were in the war until they read Captain Roosevelt's statement.

It has not been the custom in the Regular Army, Marine Corps, or the Navy for officers to make public statements that would jeopardize the peace of America. Any other officer in the Marine Corps or in our armed forces could have been reprimanded immediately or dismissed from the service for such an offense, particularly in the critical times in which we are living. The fact is that Captain Roosevelt has not the faintest conception of what war is, nor have his three brothers, all of whom—contrary to the democratic spirit of the conscription law—are commissioned officers, with practically no training, and assigned to the noncombatant supply service. Is this an example of the President's "four freedoms" in action?

The statement of Captain Roosevelt that we are in the war is untrue and part of the defeatist program to involve us in war by saying that we are already in it. As an officer in the A. E. F., I know that war means mud, blood, and death, and also that the last war was a picnic compared to this one. We are not in the war, and we are not going into this war unless attacked. No shots have been fired, no American blood has been spilled, and no American ships have been sunk. We do not claim to be neutral; we occupy a nonbelligerent status in favor of the British, but we are not at war, and will not be in war until shooting starts and Americans are killed. Under the Constitution, the Congress alone has the authority to declare war, and not Captain Roosevelt, or even the President of the United States or "Lady" Eleanor, without the consent of Congress.

I have often criticized President Roosevelt's foreign policies, because I believed that step by step they were leading us to the verge of war. I also believe that President Roosevelt is more responsible for the spread of war hysteria and war propaganda in America than anyone else. He has packed his Cabinet with the most outspoken interventionists, including three former Republicans, and has encouraged them to make sensational, hysterical, and war-provoking speeches to inflame the passions of the American people and incite them to war. He has never failed from his Chicago quarantine and police-the-world speech of October 1937 to the present day to hurl personal epithets and thunderbolts of wrath upon all Americans who disagreed with his foreign policies and wanted to keep America out of war.

I was one of the recipients of his Olympian darts under the slogan of "Martin, Barton, and Fish." Later Senator WHEELER was publicly castigated. His attack on Colonel Lindbergh as a copperhead was churlish and childish.

President Roosevelt committed a serious offense against his own code of free speech as enunciated under the four freedoms when he called Colonel Lindbergh a copperhead, which implies treasonable utterances, for urging that America keep out of war because it was not sufficiently prepared. Whether you agree with Colonel Lindbergh's statement or not, he had an absolute right in time of peace, as a free sovereign citizen, to express his views. No American should be called a copperhead simply because he places the American flag above that of any foreign nation and wants to save America first.

All that is necessary to make Colonel Lindbergh the national hero of the American people in 1941 is for foreign nations like Canada to make absurd attacks on him, and for such foreign communities as Guelph, Ontario, to destroy all books and articles by him in order "to protect the Canadian youth." The Canadians, as our close neighbors, should realize that we Americans believe in freedom of speech, of the press, and radio, and if we did not we might just as well join the Nazis instead of lease-lending $7,000,000,000 of war materials to the British to help defeat Hitler.

I hope that the American people will not be alarmed by the recent radio speech of the Secretary of War, Henry L. Stimson, rightly called "Wrong Horse Harry." There is nothing new in that speech. That was not a convoy speech; it was a war speech. He knows perfectly well that convoys mean war. The trouble with Mr. Stimson is that he is not satisfied to only have a war with Germany; he wants to go to war with Japan, Italy, and Germany, all at the same time and probably, if he continues his stumble-bum diplomacy and interventionist course, he will also take on France and Soviet Russia.

What he will have to say about the Army will come later, when he will urge sending American boys to the shambles of China, India, Africa, and Europe. For the present he has taken it upon himself to put our Navy into the war and thereby get us in through the use of convoys, but he is not fooling the American people.

The advocates of war are trying to read language into the lend-lease bill that was never there, or the bill would not have passed. The bill specifically stated that nothing in it should be construed as authorizing convoys. In addition, the Clark amendment provided that title to the defense articles must be transferred on leaving our shores, which is virtually a mandate against convoys.

The responsibility for the protection of lend-lease matériels has been the duty of the British Navy from the beginning, and it has done a very good job of it. Only eight cargo ships leaving the United States for England were sunk the first three months of this year, less than 4 percent, instead of the 40 percent published by the war-making propagandists, and the sinkings in the North Atlantic during April were less than in any month for the past year.

The repeal of the arms embargo, conscription, and the lend-lease bill were all supported in Congress as peace measures, and as the best way to keep out of war. Today the issue is crystal clear—convoys and war, or no convoys and no war. There can be no more camouflage, deceit, deception, and hypocrisy in an effort to fool the American people.

I stand where I have stood for more than a year—for all possible aid to Great Britain short of war and consistent with our own national defense. The American people want England to win and will give her aid regardless of what the Axis thinks about it. I am in accord with the program laid down by Herbert Hoover, of making America invincible on land, sea, and air, of increased production, and more merchant ships for Great Britain, but that we are not prepared and must keep out of World War No. 2.

The issue is clear-cut: Peace or war. And it should be discussed and debated throughout the Nation. The American people must decide this greatest of all issues, involving our destiny and the very existence of the Nation—by one yardstick: What is best for America.

In the East and South there is an unfriendly press, and throughout the Nation war propagandists, interventionist newspaper columnists, and radio commentators dominate and distort the news. I appeal to all American citizens who want to stay out of war to make known their views by writing or wiring President Roosevelt and the Members of the House and Senate: No convoys! No war!

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

ARTICLE BY RAYMOND J. KELLY

Mr. DONDERO. Mr. Speaker, under permission to extend my remarks, I wish to include the following article giving facts on the Great Lakes-St. Lawrence seaway by Raymond J. Kelly, past national commander of the American Legion:

Production for the defense of America might well utilize all the machinery of America's production facilities.

Yet a high percentage of those facilities, located in the favored and sheltered and easily protected interior of America, are unused. They are unused because the products of these interior facilities can't get through to the sea.

The production facilities I refer to are in the region of the Great Lakes. The reason the defense output of this region can't get through to the sea is a 48-mile stretch of the St. Lawrence River located in the International Rapids.

This stretch, now limited to vessels with a draft not beyond 14 feet, represents less than 3 percent of the Great Lakes-to-the-sea route and makes that route resemble a sack of meal with a string tied around the middle.

Remove the string and the Great Lakes plants could now be turning out a billion dollars' worth of materials for defense. The cost of removing the string would be approximately that of two battleships.

With the string removed the St. Lawrence route could carry everything but battleships and airplane carriers. As it is, the Great Lakes shipyards must be content with small orders for small boats, while most of their productive capacity goes unused. One Wisconsin firm has a contract for submarines, but these must be cut in sections and reassembled on the Atlantic coast before they can take their places as watchdogs of the Nation.

Existing shipbuilding facilities on the coasts of America are already booked solid 2 years ahead. How soon they can hope to complete the requirements of a two-ocean Navy or meet the increasing demands of the United States Maritime Commission is a moot question. Certainly the adequate defense of America requires that we get all the ships we can as fast as we can get them. And this implies utilizing every possible production facility in America.

It was this urgency which recently led President Roosevelt to say of the seaway: "It is now a vital necessity." The President added that, "The United States needs the St. Lawrence Seaway for defense. The United States needs this great landlocked sea as a secure haven in which it will always be able to build ships and more ships in order to protect our trade and our shores."

In this attitude the President's judgment coincides with that of every single one of his predecessors since 1911. Every President in the past 30 years has regarded the seaway as a patriotic measure in the national in-

terest, above political and sectional prejudices. A plank in the Republican presidential platform of 1932 endorsed it. Republicans and Democrats alike, who were motivated by national welfare, have given it their unqualified approval.

It is a defense measure now. But it was not a defense measure when endorsed by Herbert Hoover, Calvin Coolidge, Warren Harding, Woodrow Wilson, and President Taft. It stood, then, on the sole merit of aiding our national economy. Today it has the additional merit of aiding defense. Today it offers us a two-fold national bargain: Defense against aggression and defense of our national economy in the competitive markets of the world after the war.

Oil Industry Prepared to Meet Demands of America's Preparedness Program

REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

Mr. DISNEY. Mr. Speaker, no question has been raised in any quarter concerning the ability of the oil industry to supply, in any amount, and at a price near the lowest in all history, all the gasoline and other petroleum products that will be needed by the United States, during its vast preparedness program, or by other nations friendly to the United States.

And no such question will be raised. It cannot be raised for the reason that there would be no basis for it. Only two other great industries might be named, concerning which there is like certainty of a full supply for all needs—coal mining and agriculture.

But a distinction might be noted as between oil and these other two great and essential industries. Both these others have been put under Government control in order that they might be rescued from the anarchy caused by unrestricted overproduction.

The petroleum industry has for the most part policed itself. Most of the States now, due largely to efforts of the oil industry, have State conservation departments, which give assurance that any recalcitrant rebels in the industry cannot wreck it by overproduction. And there is the Federal Connally "hot oil" act, prohibiting shipment in interstate commerce of oil produced in violation of the rules of the various State commissions.

So the oil industry now, when the United States faces one of the most dangerous periods in its history, and is frantically strengthening itself to resist any aggression from abroad, finds reason for congratulating itself on the farsightedness of its leaders, and the wisdom of the rank and file of producers in upholding their hands.

In the last World War there was fear of a shortage of oil. Now, with production greater than ever in history, the petroleum industry has behind it the backlog of a 14.3-year underground reserve, as of 1939. The reserve in 1935 was 12.2 years.

In 1940 United States production reached an all-time high of 1,351,847,000 barrels. In 1920, at the close of the first war, production was 442,900,000.

America is still the producer of much more than half of all the oil produced in the world. In 1920 it produced 442,900,000 of the world total of 688,900,000 barrels; in 1940 it produced 1,351,847,000 of 2,076,800,000 barrels.

What this vast production means to the United States in preparedness is obvious when it is realized that not an airplane could fly, not a truck could move, without oil. In addition to its motive power, oil is an essential lubricant; it furnishes many of the components of high explosives; here in America it supplies fuel for all truck transportation, as well as for an increasing proportion of railway traffic. It permits workers in war industry, as well as the troops themselves, to move easily and quickly to and from the job.

It is, of course, true that Germany produces oil from coal. But that process takes four times the labor to make that it takes to raise American oil from the ground and refine it. And the coal gas is not as good as gas from petroleum. Germany cannot produce the 100-octane gas which America is now furnishing British planes, and which gives them 25 percent more speed and 25 percent higher ceiling than regular oil.

America's oil is being supplied much cheaper than during the last war. In 1920 the cost per gallon to the motorist was 29.83 cents, now it is 18.41 cents.

It is true the motorist pays more than 18.41 cents. But that is because cities, States, and the Federal Government have been adding to the cost of oil. In 1920 taxes on oil amounted only to 0.1 cent per gallon, in 1940 the tax has risen to 9.08 cents—or almost half the total cost paid by the consumer.

A few other figures show how vastly the oil business has increased since the last war: There are now 390,000 producing oil wells; in 1917, 197,000; now there are 557 refineries, then 240; now 18 gallons of gas are produced from a barrel of crude, then only 9; now stocks of gasoline are 3,500,000,000 gallons, then 412,000,000; now 126,000 miles of pipe lines, then 50,000 miles; now 467 tank ships, then 54.

Furthermore, the "kick" in each gallon of gasoline is much greater now than during the last war. Then 100-octane gas was unknown; now it is available to fly all American planes.

Without desiring in any sense to draw invidious comparisons, but merely to stress the farsighted wisdom of the oil operators, it is necessary to bring out a few facts.

America now desperately needs ships, if it is to supply Great Britain with the munitions now being constructed here. It is not because America has not fuel for the ships that there is danger these munitions may not get across; it is because, since the last war, the Nation has neglected its merchant marine. In 1920 it possessed 28,183 ships, of 16,324,024 tons; now its merchant marine is reduced to 27,212 ships, of 14,018,188 tons.

Since the last war railway mileage has shrunk from 252,845 miles to 235,064 miles in 1939. But, of course, this shrinkage in railway transport has been more than made up by hundreds of thousands of miles of paved highways and the millions of motor transports which use them.

Steel production in 1920 was 42,133,000 tons; in 1939 it was 52,799,000. A large part of this increase was caused by the great increase in the demand for motorcars. But it should be noted that the steel industry, even after Germany had overrun France, insisted that its American capacity was sufficient for all war needs. Now every mill is operating at full capacity, and yet the demand for steel cannot be met. Automobile construction will be cut at least 20 percent next year, perhaps as much as 40 percent, for lack of steel. America cannot meet all demands for steel until new mills are constructed. Though high-grade ore is plentiful, additional means of transport must be provided to bring it to the blast furnaces.

A metal absolutely essential for air war is aluminum. Here again such a shortage has developed that aluminum, until new plants can be built and put into operation, will have to be devoted entirely to war uses. Production rose from 138,042,000 pounds in 1920 to 286,882,000.

Electricity is another bottleneck. Total production increased from 43,334,282 kilowatt-hours in 1920 to 130,336,050 in 1939, and prices, as measured by 100 kilowatt-hours, fell from $6.18 in 1924 to $3.96 in 1939. But this is an electric as well as a motor age, and production did not keep pace with demand.

One reason for the shortage of aluminum is that its production from bauxite ore requires a vast amount of cheap electricity. When aluminum producers awoke to the need for increased production, they were faced with a shortage of such cheap electricity. This is now being filled by the enlargement of existing aluminum plants in the Tennessee Valley and the construction of new ones in the Pacific Northwest, where vast amounts of cheap power are being made available at Federal power plants.

In only one respect, it might be thought, have the oil people been neglectful in preparing for the future. The southeastern seaboard has been largely dependent upon tanker transportation of its oil from the Gulf coast.

Now tankers are being requisitioned by the United States Government for the carrying of much-needed oil to Great Britain. These tankers will no longer be able to offer full service to the southeastern coast. At the same time the demand for oil in this section has increased vastly, due to the location there of a number of the Government's great Army training camps.

But the oil industry's leaders foresaw just such a situation. Two years ago they planned a pipe line from Baton Rouge through this southeastern section. It was blocked by the refusal of

the railways in Georgia to grant rights-of-way, and by the refusal of the Georgia Legislature to enact remedial legislation.

The oil industry has asked that Congress pass an act making it possible for interstate carriers to secure rights-of-way, when the needs of the country demand. Latest war developments indicate that such an act will soon be passed. Surveys have been completed, material has been ordered. The pipe lines will be ready for business within a few months after Congress gives permission.

As yet the oil industry hasn't been caught napping; it is prepared to answer every demand in America's vast preparedness program.

Cantonment Construction Project at Fort Riley, Kans.

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

LETTER FROM LT. COL. JOE S. UNDERWOOD TO WILLIAM L. HUTCHESON

Mr. HALLECK. Mr. Speaker and Members of the House, this morning I received a communication addressed to me by William L. Hutcheson, general president of the United Brotherhood of Carpenters and Joiners of America, whose head office is in the city of Indianapolis, in my State. In his letter to me, Mr. Hutcheson refers to recent criticism of his organization and its members in connection with defense work. He enclosed with his communication a copy of a letter from Lt. Col. Joe S. Underwood, of the Quartermaster Corps, dealing with construction work at Fort Riley, Kans.

Mr. Hutcheson informs me that the letter from Colonel Underwood was unsolicited. He believes that the information contained in it should be made available to the Congress and the country. I am glad to follow his suggestion that the communication from Colonel Underwood be inserted in the RECORD. The communication is as follows:

OFFICE OF THE CONSTRUCTING QUARTERMASTER,
Fort Riley, Kans., May 7, 1941.

Mr. WILLIAM L. HUTCHESON,
United Brotherhood of Carpenters and Joiners,
Indianapolis, Ind.

DEAR SIR: The cantonment construction project at Fort Riley, Kans., is nearing completion and it is believed proper that I should advise you at this time as to the services rendered on that job by your local unions and their representatives.

The jurisdiction for your organization was established jointly between the Carpenters' District Council of Kansas City, Mo., Local Union 1445, Topeka, Kans.; Local Union 918, Manhattan, Kans.; and Local Union 750, Junction City, Kans.; with a joint office at Ogden, Kans., which is located directly adjacent to the east side of the Fort Riley Military Reservation.

The tremendous expansion of carpenter labor requirements which developed on short notice as materials arrived created a big problem for the union offices to handle and there was considerable confusion in the early stages of that work. However, under the able guidance of Mr. John E. Pennell, carpenters' district council, Kansas City, Mo., the situation was soon well in hand. I do not believe any office could be established to handle this problem under the existing "hurry-up" conditions without some difficulties developing.

The writer personally negotiated all union contracts in effect on this project and found all the union representatives to be eager and willing to meet all situations and problems with one outstanding aim which was to secure a solution which would protect union labor in its established policies, and at the same time be fair to the employing agency. All our points of difference were adjusted on that basis and I believe we are all mutually satisfied.

Some publicity has developed at some projects regarding the use of untrained and unqualified men as carpenters. We did have some of this develop in December or January as we were reaching our peak load. However, the fault was partially ours, as we were pressing the union offices to furnish more men at a fast rate, and with little advance notice. This prevented the union officials from securing a full examination of each applicant as to his qualifications, and in some cases the individual was permitted to go to work subject to a later examination by the union and also to release by the contractors if the individual was found unqualified. By cooperation of all concerned, this situation was quickly remedied, and I believe that all unqualified men were released after a short trial. I personally visited the union offices, checked their examination procedure, and assured myself that the union officers were making every reasonable effort to secure qualified men for us. I think the results on the job are a definite indication of the large measure of success of their endeavor.

I have endeavored in this letter to be both frank and fair in my comments, and in that connection I wish to commend to you the work of Mr. John E. Pennell in his official capacity as special representative of the Carpenters District Council, Kansas City, Mo. His leadership was self-evident in all my contacts with the local group of United Brotherhood of Carpenters and Joiners of America. I hope for an opportunity to work with him again, although, under existing prescribed procedure, I will no longer take such an active part in labor matters as I did on this project.

Yours very truly,
JOE S. UNDERWOOD,
Lt. Col., Quartermaster Corps,
Constructing Quartermaster.

The Truth About the Secretary of Labor

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

ARTICLE FROM CHICAGO DAILY NEWS

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published in the Chicago Daily News:

[From the Chicago Daily News]

MADAM PERKINS LOOKS LIKE THIS TO OUR MR. LAHEY—HER SERENITY STRIKES ONE MOST; ABUSE FAILS TO IRK SECRETARY

(By Edwin A. Lahey)

WASHINGTON, May 2.—A look of worry is the common mark of the average Washington face.

That gent in the plug hat is worried about the state of the universe; this one wringing his hands worries about the future of the Nation; another about increasing his share of the world's goods without being unpatriotic; that one about preserving the seat of his pants. Whatever it is they worry about, the mark is indisputable.

To find serenity of expression, you go to the third floor of the Department of Labor at Fourteenth Street and Constitution Avenue, keep turning until you come to the Secretary's office, and ask for Frances Perkins.

Here, next to President Roosevelt, say her friends, is the most publicly abused person in Washington. A thousand businessmen at the Chamber of Commerce of the United States convention rose to their feet and cheered the other day when a Chicago tycoon, using the technique of a lawyer in the South State Street Court, roared from the depths of his sympathetic soul:

"How long will it be until public opinion will become so aroused that it will demand the resignation of the Secretary of Labor, who condones sit-down strikes, who has prevented the deportation of alien Harry Bridges, etc., etc.?"

COLUMNISTS' ATTACKS

In between unpolished attacks like this, cosmic columnists, who bloom in Washington like the wisteria, have, in a ponderous procession from untenable premises to unshakable conclusions, advanced their cogent reasons for the removal of Miss Perkins from the Cabinet. Others have revealed the "resignation" of Miss Perkins in one exclusive dispatch after another.

Senator BYRD, of Virginia, a big apple grower, added his bit on the Senate floor last week by declaring that what this country needed was a "two fisted" Secretary of Labor with "intestinal fortitude." This comes under the head of local humor, because if there's anything Miss Perkins has, it's intestinal fortitude

You would expect to find a lady thus abused in somewhat of a pout.

Instead, there is a pleasant shock in finding a warm, human, middle-aged woman, betraying traces of a sense of humor behind the precise diction of the educated New Englander. What strikes you most is her serenity, which is not to be confused with a lack of awareness It is that look so few people have, the look that comes only from what Thomas à Kempis described as "living interiorly."

SHE'S NOT RESENTFUL

She doesn't feel resentful about the attacks on her. Sometimes she feels surprised, sometimes she feels rather sadly that perhaps her critics are simplifying their own problems by taking it out on her. Her kindly faith in the world at large is so great that she did not know until recently that there existed any sex antagonism toward her.

She is such a completely unresentful and Christian woman that it becomes a little disconcerting to realize that she means it. If Alexander Hamilton were alive and in public life, he would be her most violent critic, for he never meant anything so much as when he said.

"One great error is that we suppose mankind more honest than they are."

But, as indicated before, Madam Perkins' tranquillity is not the result of not knowing the score. She knows that labor skates are human and have their percentages of phonies the same as any other segment of society.

EVALUATES LABOR LEADERS

She further knows that the big labor leaders sometimes have their own axes to grind and that they do not represent the whole of American labor, about four-fifths of which are still untouched by the labor unions.

Because she knows this, and a lot more, the internal storms and criticisms from organized labor itself do not touch her. She keeps on doing what her department was created for—"to foster and promote the welfare of the workers."

The evidence that she does this is abundant. Year after year, since she entered the Roosevelt Cabinet in 1933, the annual reports have come from the Government Printing Office, detailing the achievements of the Department of Labor. We are not going to be the first one to read these reports, since they don't belong in this portrait, but there are enough outstanding things in sight to give you an idea.

The Government employment agencies are an example. They are completely the child of Madam Perkins.

Unlike any other public official in this town, she doesn't seem to care if she does not get public acclaim for her contributions to the society in which she feels such confidence. Like Ol' Man River, she just keeps rolling along, with her eyes set on the statutory objective of her office: "To foster and promote the welfare of the workers."

As unfairly and libelously as she has been represented by dubious friends of labor, her attitude is available for all who will read or listen to her public utterances.

LABOR'S RESPONSIBILITY

That attitude is that labor carries with it responsibility not only to wage earners but to all the people of the United States, a responsibility for observing contracts, for thwarting dishonest and subversive influences in its ranks, for conscientious efforts to adjust differences within the labor movement itself, and for cooperation with employers to avoid delays and interruptions and to increase production and efficiency.

She is calmly confident of the inevitable and universal development of happier labor relations and likes to think of a midwestern employer as the pattern of future thinking by industrialists. This employer, she relates with relish, had the happy idea that his workers were as important as his customers. With this in mind, he paid the same courteous attention to their complaints as his clerks did to the customers and the result was continuous and honorable peace.

In summing up it might be well to quote a rough and tumble labor skate, who would resent it if one suggested that he was paraphrasing the Sermon on the Mount, "Blessed are the clean of heart, and so forth." He dismissed some critic of Madam Perkins recently by snorting:

"Fanny Perkins? You're right, I'm for her. Because of the people that's against her."

Bases in the Atlantic

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

EDITORIAL FROM THE BOSTON (MASS.) HERALD

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of yesterday:

[From the Boston (Mass.) Herald of May 15, 1941]

BASES IN THE ATLANTIC

However we may differ on our policy in regard to the war in Europe, we Americans are united in our determination, whatever the cost, to fight to defend the Western Hemisphere. In his provocative new book, United We Stand, Hanson W. Baldwin, the military critic of the New York Times, discusses at some length the bases which we need for the effective naval, military, or air protection of that vast area. Although you may not agree with his conclusions in other fields—he is, for example, firmly against our outright participation in the European struggle—his observations on our defensive requirements in the western Atlantic are not likely to be challenged.

In the north, Mr. Hanson asks bases at Cartright, Labrador, and Julianehaab, Greenland, in addition to that which we are already establishing in Newfoundland. He suggests that other bases in Nova Scotia and New Brunswick are desirable, if they can be achieved with Canada's cooperation.

In the south, of course, we are already building a base at Bermuda. As for the more distant Azores, which belong to Portugal, he holds that they are "clearly beyond our normal strategic scope." Nevertheless, "because of their future importance as potential air bases, we must consider the utility of these islands carefully. * * * In the case of hostilities, they would be made to serve our purpose by the use of the fleet and its marine force to seize them immediately upon the outbreak of conflict and by their organization as an advanced base."

Proceeding further south into the Caribbean, we now have what he regards as an adequate screen for the vital Panama Canal in our established or prospective bases on the Bahamas, Cuba, Jamaica, Puerto Rico, the Virgin Islands, Antigua, Santa Lucia, Trinidad, and British Guiana. But, he maintains, perhaps looking toward a possible German occupation of French Africa, that we must have a formidable base on Brazil's shoulder, possibly at Natal or Pernambuco. If the Brazilians decline to grant permission on the score of common defense, it would be worth $100,000,000 to us, he declares, to buy the necessary territory outright. This line of bases would insure, at least so far as the Atlantic coast is concerned, that we should be able to "bomb potential enemies in Europe, without in turn exposing our own mainland to retaliatory bombing."

Losses of Utah Honey Producers

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

ARTICLE BY RAY McGUIRE AND THERON LIDDLE, OF SALT LAKE CITY, UTAH

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks I should like to insert in the RECORD an article written by Ray McGuire and Theron Liddle, both of Salt Lake City, Utah, for publication in the American Bee Journal. This article was prompted by the severe losses sustained by Utah honey producers as a result of faulty distribution of grasshopper bait.

The article follows:

[From the American Bee Journal]

Utah bee owners who sustained heavy losses during the summer of 1939 through the deaths of millions of bees from unknown causes are convinced definitely after 2 years' study that the deaths were caused by poison grasshopper bait distributed to farmers by the Federal Government and spread on the fields by the farmers. As a result of the intensive survey, the bee owners have introduced into the United States House of Representatives 49 claims asking the Federal Government to reimburse them for their losses. The claims, ranging from $110 to $22,000, total approximately $100,000.

The scourge virtually bankrupted many Utah bee men, some of whom lost as high as 90 percent of their bees. In the spring of 1939, Utah had approximately 73,000 hives of bees. By the fall of that year the number of hives is believed to have dropped to 45,000, and now the State has only 51,000 hives in spite of heavy replacements.

The Utah bee owners face a hard fight in their effort to obtain reimbursement from the Federal Government, for the Department of Agriculture has reported officially that the grasshopper bait did not cause the bee deaths. However, the Utahans are convinced that the bait poison caused the bee losses, and, aided by J. Fleming Wakefield, State bee inspector, they are continuing to pile up evidence with which they hope to win approval of the claims introduced into the House of Representatives by Congressman J. W. ROBINSON, of Provo, Utah.

In its report the Department of Agriculture contends that careful studies have proved that bees will not touch the poison bait, even when sweetened to be made especially attractive to the bees. In a report by the Utah Agricultural Experiment Station in cooperation with the United States Department of Agriculture, it is stated that in the immediate vicinity of apiaries, 460 applications of bait were applied on spread cheesecloth or burlap, and at rates 10 to 15 times those normally used for grasshopper control. Frequent observations were made during all hours of the day, during good honey flows as well as during dearths when little nectar was available, and when baits would be attractive to the bees if there were any attraction at all. In all these tests only 39 bees were observed to visit the baits, and none stopped to feed, the report states.

The cooperating investigators from the Department and from the Utah experimental station concluded from their experiments that there was no evidence whatsoever that grasshopper bait was attractive to honey bees or that they would feed upon it under any conditions.

The Utahans answer this report by admitting that the bees do not feed directly upon the bait, but they contend that the arsenic from the bait poisons the water in ditches and pools from which the bees drink. They back up these statements with State and Federal chemists' analyses which show water samples from bee-drinking spots to be contaminated with arsenic to the same degree that arsenic is revealed in the bodies of the dead bees.

The bee owners point out that virtually all watering in Utah is by irrigation, and that this water, after coming in contact with the poison bait in the fields, runs into drain ditches or stands in pools from which the bees drink. The Department of Agriculture argues that no great bee losses were reported in other States in which the grasshopper bait was distributed. The Utahans answer by saying that the States cited by the Department are not heavy irrigation States, and that many of them depend on rainfall for crop watering, thereby eliminating the drainage conditions existing in Utah.

The beemen in their fight for reimbursement from the Federal Government will depend on stories such as the following statement by Louis Christensen, bee raiser of Lehi, Utah:

"On June 27, 1939, grasshopper bait was spread on farms in the Lehi area, and at the same time an irrigating turn was in progress in the vicinity of my hives. On June 29 my bees started dying, and by July 3—only 4 days later—I had lost 432 colonies of bees.

"These deaths occurred before there was any fruit spraying, so the deaths could not be attributed to poison spray. The queens and drones were not affected, so the deaths could not have been caused by an infectious disease."

Similar experiences throughout the State have convinced Mr. Wakefield that the claims against the Government are justified, and he now is preparing all available data to present to Congress in defense of the Utah bee owners' reimbursement measures.

The Department of Agriculture, in denying that the grasshopper bait caused the deaths, contends that the deaths must have been due to poor management, infectious diseases, starvation, weather, fruit spray, or poisonous weeds.

Mr. Wakefield answers those arguments one by one as follows:

Poor management: Bees have been raised in Utah for 97 years, and most of the owners who lost heavily were experienced beemen of many years' experience.

Infectious diseases: The queens and drones were not affected as would have been the case with an infectious disease, and chemical analyses have proved arsenic to be the cause of death.

Starvation: Ample food obviously was available near the hives of many of the bees which died. Also, analyses of bees which were known to have died of starvation showed only 0.05 milligram of arsenic in the bodies, while bees which died in Utah's "plague" analyzed from 0.45 to 0.76 milligram of arsenic.

Weather: There were no unusual weather conditions during the period of the deaths.

Fruit spray: Research by the Utahans proved that bees would not touch the fruit spray which has been used in the State for many years without harm to the bees. Fruit spray did not contaminate the water because little of it reaches the ground.

Poisonous weeds: There are no large amounts of poisonous weeds in Utah, and none which contains arsenic.

"Our studies have convinced us beyond doubt that our bees were killed by drinking water poisoned by the grasshopper bait," Mr. Wakefield says. "Our next job is to prove it to Congress so the Utah bee owners will be reimbursed, and to the Department of Agriculture so a method of grasshopper control can be worked out which will not be injurious to our bees."

The Americanism of Lee

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

SPEECH DELIVERED BY DR. R. D. W. CONNOR, ARCHIVIST OF THE UNITED STATES

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered on May 11, 1941, North Carolina Day, at Stratford Hall, Westmoreland County, by Dr. R. D. W. Connor, a son of North Carolina, on the subject The Americanism of Lee:

I hope it will not seem to you a violation of the proprieties of this occasion if I open my brief speech upon a personal note. Lee and Stratford—what memories those names, those associations, stir within me. They call to mind a North Carolina boy of 12 or 14 years, who spent many a summer's day and winter's evening pouring over the pages of John Esten Cooke's Surrey of Eagle's Nest and Mohun or thumbing the pages of Jones' Personal Reminiscences and Long's Memoirs of Robert E. Lee until he knew them almost by heart. Lee became his hero and Stratford the Valhalla of all southern heroes, a place like Olympus of which he dreamed but never hoped to see.

Stratford, where 137 years ago a child was born who was destined to add luster to the name of the most illustrious of Virginia families. From that family, says his biographer, Robert E. Lee inherited a name writ as large as any in the history of his country and transmitted to him with an honor which it was his constant care never to tarnish. The negative virtue of bearing such a name for three score years and more without tarnish would have been sufficient distinction for most men, but for Robert E. Lee, was reserved nothing less than the glory of lifting it by his own achievements from mere distinction to immortality.

Before Lee's own fame reached its apogee those who bore the name thought it fame enough to be known as the Lees of Virginia. His father, "Light Horse Harry" Lee, the companion at arms of Washington and Greene, spoke for the Lee clan when he said: "Virginia is my country, her only will I obey." Certainly no other family so adequately personified the qualities and characteristics of Virginians, and those qualities and characteristics were woven into the very warp and woof of the personality of Robert E. Lee.

With such an inheritance, it was inevitable that General Lee should think of himself as preeminently a Virginian. In the supreme crisis of his life, when compelled to choose between the certain fame to be won as the commanding general of the armies of the United States and what at the time he believed would be the equally certain obscurity of a regimental officer in the Army of Virginia, he chose the latter without hesitation. Informing his elder brother that he had resigned his commission in the United States Army, he added: "I am now a private citizen, and have no other ambition than to remain at home." What a fate for the greatest soldier of his time to contemplate.

Lee had acted as a Virginian, and for a full half century his own people accepted him as such. For himself he desired no greater distinction, but the world would not have it so. Washington, men began to say, was a great Virginian, but he was also a great American. So, too, were Jefferson, and Madison, and Monroe, and Marshall, and, in our own times, Woodrow Wilson. Thus it began to dawn upon us all that to be a great Virginian is to be a great American, for certainly from no other community have the American people drawn more of those characteristics, both physical and spiritual, that we love to think of as distinctively American than from Virginia.

Americans hold to a pragmatic philosophy of life; Robert E. Lee was a pragmatist in the best sense of the term. Theories and philosophical speculations were not for him. War was his profession: but if he had a theory of war, it must be discovered in his acts, not in his words. His test of any proposed act or course of action was simply, Is it right; and if right, will it work?

Democracy is also a characteristic of American life. Robert E. Lee was a Democrat by nature, believing in "the absolute equality of all men before the law and before God." Lee's democracy was the kind "that levels by exalting instead of lowering"; his way of life was guided by the principle that one's pleasures and privileges are increased by sharing them.

Americans love peace. Robert E. Lee was a man of peace, but he did not belong to that category of persons who regard peace as merely the absence of war. He would have rejected Benjamin Franklin's aphorism that there never was a good war or a bad peace. The kind of peace that Lee loved was the peace of justice, the peace of liberty, the peace of righteousness, and for this kind of peace he was ever ready and willing to wage war. War, he said, is justified when peace is its object.

Americans love a life of action; so did Lee. Ease and idleness made no appeal to him; no man was less fitted for the cloister or the hearth. Never was he so happy as when astride the prancing Traveler he rode along his battle lines; or when matching his engineering skill against the mighty floods of the Mississippi; or when Mexican musket balls and grape were whistling over his head in a perfect shower; or when from Marye's Heights he followed the ebb and flow of battle across the Rappahannock. "It is well that this is so terrible," he said to his companions, "or else we might grow fond of it."

Americans love fair play and despise the player who disputes the umpire's decision. So did Lee. He fought his fight, he lost, he accepted the result. For him, no sulking in his tent, no vain regrets, no harboring of ill feeling against his victorious foe. To the people of the South he proclaimed his conviction that it was "the duty of everyone to unite in the restoration of the country, and the reestablishment of peace and harmony," and they accepted his advice. If to Lincoln belongs the credit for restoring the physical union of our country, to Lee belongs the credit for its spiritual restoration. Such is the American way.

But why multiply examples of Lee's Americanism? The sum of the matter is that in Robert E. Lee flowered not merely the virtues of Virginia, but also the virtues of America.

Some 30 years ago a New England Yankee published a book to which he gave the title, "Lee, the American." It almost took our breath away. Lee, who had thrown up his commission in the United States Army rather than make war upon the South. Lee, who had declared that he would never again draw his sword save in defense of Virginia. Lee, who for 3 long years carried the fortunes of the southern Confederacy on the point of his sword. Lee, the American. How could this be? Northern prejudice was not yet prepared to admit Lee into the company of Washington and Lincoln as the third in the triad of American immortals. Southern partiality was inclined to resent the intrusion of the Yankee psychoanalyst into the innermost secrets of the mind and soul of Lee. But time is the great physician of the spirit as well as of the body, and time was on Bradford's side. Bradford, indeed, had worked a miracle; he had fitted the American eye with bifocal lenses, one-half of which corrected the hyperopia of the northern eye which had seen Lee only as a dim, vague figure too far removed to be clearly preceived and understood, while the other half corrected the myopia of the southern eye which had prevented the South from seeing the larger significance of his career. To both North and South, Bradford had revealed a new Lee, and this revelation, I think, we may record as one of the most significant facts of recent American history. The intangibles are often important factors in shaping the history of nations; the spirit of "Lee, the American" must assuredly be reckoned as one of the most important factors in the spiritual reunion of our country.

It took Bradford himself 25 years to realize the full significance of his achievement. In the preface of the first edition of

his book, published in 1912, he stated that his aim was simply "to give a clear, consistent, sympathetic portrait of a great soul." In the preface of the second edition, published after a lapse of 14 years, he noted with gratification that the interest of the public, both North and South, in the subject of his book "seems by no means to have diminished." How could this continuing interest be explained? Bradford had the answer. "The colossal struggle of the European war [1914–18]," he wrote, "with all the passions and sacrifices involved in it, has made the American Civil War in general seem not perhaps less important, but more remote. Yet the great figures of Lee and Lincoln stand out and become more impressive and more significant for American life and thought as the years pass on. In a sense their problems were not our problems, but assuredly there never was a time when our country and all countries needed more their tolerant, human spirit and their broad, constructive intelligence." And so with prophetic vision, Bradford dedicated his Lee the American to "the young men, both of the North and of the South, who can make or unmake the future of the America of Washington, of Lincoln, and of Lee."

Washington who founded the Union, Lincoln who saved it from physical disruption, Lee who restored its spiritual unity—what message would they have for their countrymen today if they could speak to us? I think I know the answer, because I know that the things they stood for and fought for in their own times were not the transitory things of life but the things that are fundamental, universal, and eternal. Justice. Liberty. Righteousness. These are the things that make a people great; and these are the things for which a people who wish to remain great must be willing to make sacrifices, not merely for themselves but for men of good will everywhere. "We had," wrote General Lee, "sacred principles to maintain and rights to defend, for which we were in duty bound to do our best * * *." And I do not doubt that Lee the American spoke the sentiments of his fellow Americans, Washington and Lincoln.

American People Have Right to Demand Truth Concerning War Aims of Administration

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1941

Mr. SHAFER of Michigan. Mr. Speaker, a recent War Department newspaper release tells how Army clothing and equipment will be tested under simulated field conditions in a laboratory at Harvard University. Thirty soldiers, according to the release, will be used in the experiment, which calls for them to march on a treadmill at a rate prescribed by an Infantry regulation, carrying regulation packs, with 10-minute rest periods at the end of each hour of marching.

The release further states that the room in which the test will be made is to be kept dry and the treadmill is to be heated to 160° F., to simulate the heating of the desert sand. The equipment of the laboratory—

will be altered to make possible this test of performance of men marching under various climatic conditions existing in the United States.

There is a serious implication in this news release, Mr. Speaker. That implication is that somebody, somewhere in high authority in the United States, is planning to send American soldiers into climates so hot and so moist that the Army does not even know whether the clothing and equipment now being furnished will stand up under the climatic conditions the men will face. That is what this test is designed to show. That is the secret so cleverly covered up by the statement that the men will march "under various conditions * * * approximate to those found during summer months in the western desert region of the United States."

I know of no Member of this House, Mr. Speaker, who possesses the remotest idea that any of Hitler's panzer divisions are to strike in the desert of Arizona or in the sand stretches of the Mojave. How long are the American people to be fed this sort of stuff without being told a little of the plain truth about where our boys are to be sent or where they are to fight? Only a few days ago we read in the morning newspapers that many of our soldiers might be sent to French Martinique. We have been hearing for weeks that they may go to distant Dakar, on the bulge of Africa. The facetious remark made by former Representative Bruce Barton that American boys "must die for dear old Dong Dang" may prove to have been prophetic if the American people, if the fathers and mothers of this country, do not awaken and become alert to what is being planned. We are told that officers and soldiers are being taught Spanish. This news came out many weeks ago, and at the same time Mrs. Roosevelt recommended that American girls study Spanish.

This whole proceeding, Mr. Speaker, smacks of a deception and of a covering up of a dissembling that is serious, that is dangerous, and that is dishonest and deceptive so far as the American people are concerned. Most Members of this Congress will agree that if anybody is entitled to be told something about what is being done about this Nation getting into war, it is the men who must do the fighting and the dying in a war, and their fathers, mothers, brothers, sisters, wives, and children.

If there is anybody who has a right to know what master minds are sitting behind the bulwarks of a great political bureaucracy, planning to send American boys to die on the hot sands of some foreign country, it is the boys themselves and their loved ones. Conditions approximating the desert regions of the United States. What the War Department means is conditions approximating Martinique, Dakar, Dong-Dang, and Heaven alone knows where else.

Mr. Speaker, what has become of all the solemn pledges that were made by the President of the United States that our boys were not to be sent to fight anywhere except in case of attack? It is high time the American people were told more of the truth of what is going on, of what is being planned and where our American boys are to be sent to fight and die. The American people are entitled to this information. They ought to have it. This Congress ought to see that they get it. Fairness to everybody demands definiteness now.

Coal! Will There Be Enough for You?

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

ARTICLE FROM THE CINCINNATI ENQUIRER

Mr. MAY. Mr. Speaker, I speak today for a great basic national-defense industry, that of bituminous coal, and for the men who own and operate it, as well as their employees, who, with their families, must look to and depend upon it for life, health, and happiness. I call it not only basic but important, because it is the great motive power that rolls the wheels of our marvelous industrial system and maintains the efficiency and effectiveness of the greatest and best transportation facilities known to the whole world, our magnificent system of American railways. Without the complete coordination and cooperative effort of these two great industrial systems all our efforts and plans for the defense of the lives and liberties of the free people of an entire continent would be futile and a miserable and hopeless failure. I know of no instance where either of these great and powerful economic forces have not fully and wholeheartedly cooperated with and supported our Government in our rearmament effort, and still I have not yet mentioned the most vital and important element of our citizenry in this connection, those who work in these two great industrial systems. Unless the engineer remains at the throttle and the fireman in his place, the locomotive will cease to haul the products of our farms and factories, and want and misery will come to haunt the families and homes of all of us, including the wives and children of the engineer and the fireman. Unless the 450,000 brave and courageous men who load the coal in our mines and the millions that work in our factories and mills answer the call to work and remain at their post of duty to the end of their shift, all industry shall become completely paralyzed, economic chaos and famine will soon follow, and liberty in the last stronghold of freedom will perish from the earth. Let us hope and pray that leadership in both industry and labor may quickly sense their whole responsibility in this hour of our country's peril. Mr. Speaker, I ask leave to extend my remarks at this point in the

RECORD by including an article under the heading "Coal. Will there be enough for you?" which I clipped from the Cincinnati Enquirer of May 14.

[From the Cincinnati Enquirer of May 14, 1941]

COAL! WILL THERE BE ENOUGH FOR YOU?

The most important material in our national-defense program is coal.

To produce the planes, tanks, guns, and munitions needed for defense, a continuous supply of coal is absolutely necessary. Important in maintaining this continuous supply is the storing of an adequate coal reserve by all consumers—home and industrial alike!

Coal consumption from May 1 to October 1, even before the peak of cold weather and national-defense industry demands begin, will be 206,500,000 tons.

Under ordinary circumstances an adequate reserve would have been built up at the mines, at retail coal dealers, and at industrial plants. In fact, on April 1, 1941, these reserve stores totaled 50,650,000 tons.

But the recent strike reduced stocks by May 1, 1941, to 13,500,000 tons.

For safety, this storage in homes, at retail dealers and in industrial plants by October 1, 1941, should total at least 50,000,000 tons.

This means that by October 1, 1941, there must be added to present stocks 36,500,000 tons.

The problem, therefore, is to produce, transport and deliver by October 1, 1941, the coal necessary to build up present reserves to 50,000,000 tons, plus the 206,500,000 tons which will be consumed by October 1, a grand total of 243,000,000 tons.

This is an average of more than 11,500,000 tons of coal each week.

During the period from January 1 to April 1, 1941, the average weekly production totaled only 10,400,000 tons, about 1,100,000 tons per week less than is necessary to provide a minimum margin of safety for insuring the necessary coal reserve for industrial and home use.

Because of the general acceptance of our domestic coals for storing by retailers and householders, mines in our district must of necessity furnish a very high percentage of this type of coal.

The softer structure, higher sulfur coals are not generally acceptable for storing purposes. Therefore, mines producing such coals rarely operate at anything near capacity during the summer months.

From May to September 1940, inclusive, the country's entire coal production was only 8,300,000 tons per week.

This year, in order to provide enough coal for only reasonable storage and meet actual consumers' demands, the coal industry should ship—and consumers accept—3,200,000 tons more each week from May through September.

This is probably the limit of the capacity of the mines and the railroads.

There are other factors which will tend to delay the building up of adequate coal reserves for the coming fall and winter months when cold weather will add its burden of increased consumption of domestic coals. These factors are: the use of coal cars by other national-defense industries; the congestion of cars at the seaboard and lake ports; the loss of employees at the mines because of the draft and the increased need for skilled labor by other defense industries.

As defense production, now only 50 percent under way, reaches its peak, the supply of coal will not satisfy the demand and the situation will indeed be serious for those who have not anticipated their needs.

In your own interest, as well as in the interest of national defense, it is imperative that as much coal as possible be speedily placed in storage in homes and in industrial plants—while operating and transportation conditions are most favorable.

In plain words, if all who will need coal this winter begin to store theirs now, as quickly as it is mined and shipped, there will be coal for all. If everyone waits until September and October to order coal, there will be such a piling up of orders that shipments and deliveries cannot be made to all. This should not be allowed to happen. It will not happen if you get your coal now.

Appalachian Coals, Inc., Transportation Building, Cincinnati, Ohio.

To be sure you have enough coal, store yours at once.

No "Union Now" or Any Other Time

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1941

EDITORIAL FROM COLORADO SPRINGS GAZETTE

Mr. SHAFER of Michigan. Mr. Speaker, I have an invitation to attend a Union Now luncheon to be held in Washington Monday, May 19. I do not intend to accept the invitation because I do not want Union Now or any other time. I want the United States of America to remain the free and independent United States of America that we have known for the past 160 years.

I shall have more to say about this Union Now luncheon the first of next week. In the meantime I shall be content to extend my remarks to include an editorial recently published in the Colorado Springs Gazette. The editorial follows:

[From the Colorado Springs Gazette]

NO UNION NOW

Both in Britain and in the United States there is some discussion of Anglo-American union, modeled, perhaps, after the American federation. British proponents know what they want. It is, first of all, victory in war, and then speedy economic rehabilitation. Their American associates seem more dazzled than reasoning. It is a peculiarity of Americans that for all their boast of material achievement, they accept inferiority in international affairs.

The Englishman is the very personification of a proud empire, fairly exuding the glorious history of a brilliant nation. He is British, first, last, and always, and he is undeviating in his patriotism and his devotion to the British interest.

The American bows as if by instinct. Perhaps his uniformed lodges have not afforded adequate escape. Maybe his democracy has worked less well along social lines than political and economic. He too, has a background of history as glorious as any written. He is a citizen of a first nation, the world's most powerful nation, a nation which need fear no one nor is under any compulsion to curry favor. He has every cause to be proud, but usually he is apologetic.

So American proponents speak Anglo-American union in terms of American political idiom, but on the basis of need urged by their British "cousins." Incidentally, the relationship itself no longer holds. The American has slowly evolved as a distinct race, a composite of many races, but showing the predominant characteristics of none. The hyphen no longer can be employed. The stock is peculiarly American.

There is a sentimental attachment for Britain that is not held for others with perhaps stronger blood strains, because of ideals and interests held in common. The course of empire and republic in many respects runs parallel. There has been an undeclared working arrangement in the past and there will be need for some such arrangement in the future. What that arrangement is depends upon what future needs may be, and nobody can foresee them.

The very idea of union, then, is little more than daydreaming. The basis on which it is offered by its American protagonists is a nightmare.

The suggestion is that because Federal union has served America well it automatically becomes the basis for Anglo-American union. The British will not agree. For that matter, they know nothing of federalization. They have rejected it in favor of empire. Empire and republic cannot be joined. What becomes of India in such an arrangement? What is the place even of the dominions? The British Parliament is not of the Commonwealth but of the United Kingdom. And what is the United States but a junior partner in an English-speaking union?

It is all very pretty, but it has no more substantial starting point than that flight of British fiction which finds Mr. Roosevelt spending the end of his term in Buckingham Palace, George and Elizabeth at some convenient spot, and the union Parliament convening in Bermuda to order Anglo-American affairs.

Foreign Trade Week

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

STATEMENT BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the President issued yesterday in connection with the celebration of Foreign Trade Week.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As we join in the observance of National Foreign Trade Week this year, we know that we are facing a world-wide crisis of truly desperate intensity. Totalitarian aggression is now reaching out into nearly every quarter of the globe. It has become clear that this aggression menaces not only our foreign trade and our national business prosperity, but also the very social and spiritual framework of our democratic way of life. Already, and to a very serious extent, military and economic aggression have circumscribed the area within which the principles upon which we base our international commercial relations can operate.

International commerce in a world dominated by totalitarianism would never be carried on for the mutual benefit of all. It would be rigorously controlled for the sole advantage of those nations and ruling groups

which already have declared their determination to conquer the world and to subordinate to their own profit the welfare of all other peoples.

That this is a fact is attested by official or inspired German announcements. Trade in such a world would be merely another weapon for further ruthless aggression and subjugation.

Therefore, it is idle for us to talk of future foreign trade unless we are ready, now, to defend the principles upon which it is and must be based. That defense calls most urgently on every American for his immediate and utmost effort. Otherwise there can be no foreign trade of the future on fair terms, under democratic principles.

During the past 7 years the United States has made real progress toward the rebuilding of world commerce on the principles of mutual benefit, fair dealing, and friendly cooperation among nations. Despite the economic and spiritual black-out of certain countries, we are continuing to make progress toward this objective in cooperation with our good neighbors to the south and elsewhere.

Both now and after the emergency shall have passed the United States must continue its leadership in the preservation and promotion of liberal economic policies. Only through that leadership can this country fulfill its responsibility in the rebuilding of a world economy from the chaos into which it has been plunged by destructive trade restrictions, born largely of greed and unreasoning fear, and by ruthless aggression.

Citizenship

EXTENSION OF REMARKS

OF

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

ADDRESS BY THE VICE PRESIDENT

Mr. HUGHES. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a radio address on the subject We Belong to America, delivered by the Vice President yesterday in Washington, under the auspices of the National Education Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE BELONG TO AMERICA

To be able to say, "I am an American" is a precious privilege. St. Paul 1,900 years ago claimed preferred treatment on the ground of his Roman citizenship. We in the United States today have in our citizenship something far more precious than that which Paul valued so highly. Men paid money to buy Roman citizenship. Every year in the United States we give citizenship free of charge to two and one-half million young men and women who have just reached the age of 21. I wish there might be a special ceremony or birthday celebration for each of these two and a half million, so that the solemnity of the first day of United States citizenship might be fittingly observed.

For my part, I remember when that day came to me 33 years ago. My grandfather wrote me a special letter on the privileges and responsibilities of citizenship. Today the responsibilities of United States citizenship are far greater than in 1909. The word "American" means more now than it did then. In 1909 most of us looked on an American as merely a citizen of the United States. Today the idea of Pan-Americanism has become so strong that we look on the word "American" as denoting citizenship not merely in a particular nation, but also citizenship in the entire hemisphere. Every nation in this hemisphere is bound together by treaties on behalf of New World democracy.

To an increasing extent, I hope the citizens of Mexico, Brazil, Argentina, and all of Latin America, as well as the United States, will look on themselves as having in addition to their national citizenship a supercitizenship in America, the hemisphere where nations earnestly try to settle their disputes peacefully without lying, treaty breaking, or aggression. As citizens of the United States and America, we must do everything possible to make the America of the future worthy of the dreams of the great liberators of the past century.

We must never permit in America the development of the idea that one brand of humanity is superior to the others. We have here in America a chosen land but not a chosen race. I remember a boyhood friend whose mother was a Swedish washerwoman who spoke very broken English. The boy did well at school, made a business success, and became mayor of his town.

There was a time when certain so-called Americans looked down on the Irish. Later on they look down on the Italians, the Greeks, and the Poles. But as time has gone on we have found that the children of the poverty-stricken immigrants have learned our language and our habits and have done well. Listen to the names of famous people in athletics, in the arts, in politics, and in science. Read the names of the Yankee baseball players, the Notre Dame or Minnesota football players. Germans, Italians, Poles, Jews, and Negroes all make their mark not only in football and boxing but in business and the arts. Knudsen, from Denmark, and Hillman, from Lithuania, are active in running our great defense effort.

The foreigners have made America, and America has made them. We ask just one thing of our naturalized foreigners, and that is that they believe wholeheartedly in the American democratic idea. When they take their examinations to determine their worthiness for naturalization, they are asked questions designed to show their knowledge of the processes of democracy. It is my observation that many naturalized immigrants and their children appreciate the blessings of democracy more completely than many whose ancestors have lived here for 200 years. Democracy is not mere talk with them. They know that America is the land of opportunity—that there never has been such a chosen land and that there never will be its like again.

They want to do everything possible to cherish such a land, so that it may serve as a veritable mountain of the Lord to which all races may flow to live together in peace, abundance, and security.

America is not a land of the whites alone, the Negroes alone, the Jews alone, the Catholics alone, or the Anglo-Saxons alone. We like the Germans in America, provided only that they accept the American ideal and do not directly or indirectly give comfort to the Hitler idea of racial superiority, which is so utterly opposed to what America stands for.

And so I hope that on this day our fine German citizens will join with our fine citizens from every other land in thanking God for America—for this hemisphere which we mean to keep free today and for the centuries to come.

Foreign Trade Week

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

ADDRESS BY THE SECRETARY OF STATE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered last evening by the Secretary of State in connection with the celebration of Foreign Trade Week, which was broadcast over a Nation-wide hook-up.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tonight we inaugurate another annual National Foreign Trade Week. Again, as a year ago, it comes in the midst of war. You know as well as I that now there is little use in our talking about and planning for foreign trade unless the outcome of the war is favorable to the free peoples of the world. For trade means free bargaining to mutual advantage. To us it does not mean exploitation by military cliques backed by cannon. And so, for the present, our foreign trade consists more and more, and will consist more and more, of making and placing in the hands of nations which are resisting unlawful attack the tools of self-defense. This trade, like all trade, is futile if the goods produced do not reach those for whom they are intended.

We are a practical people. When we set ourselves to a task we finish it. We have set ourselves to the task of arming and supplying those whose successful defense is vital to our security. I have said before, and I repeat: We will not permit this purpose to be frustrated. We will find a way to insure that the weapons pouring in ever greater volume from our factories will reach the hands which eagerly await them. Only as we stand strong and united in this purpose, can we look forward to a brighter day.

We have seen during the past year the continued spread of ruthless aggression by nations bent upon world domination. We have seen the enslavement of every nation which was so unfortunate as to stand in the way and was not strong enough to repel aggression. Nations which were unable to protect themselves have been crushed by military frightfulness that has known no bounds. In each territory taken over, organized brutality has been carried to the utmost lengths in order to coerce conquered peoples into unwilling support of new conquests and an ever-widening circle of enslavement.

The safety of our Nation, as of every free nation, is in mortal danger insofar as our people permit themselves to be lulled into a false sense of security by those who mistakenly assume that two oceans, plus a natural desire to be at peace with all the world, will protect us. The paramount purpose of the leaders of the movement of conquest is to secure control of the high seas, which control is essential to the execution of their program of world domination. Every consideration of our own defense and safety requires that we see to it that Great Britain receives adequate supplies for her successful resistance.

At this critical moment we must not be weakened by internal division; we must

devote our whole energy to essential tasks. The production and transfer of essential supplies to those countries which are actively resisting aggression demand sacrifice of time and substance, and making of maximum effort, on the part of each and every American citizen. Delays in meeting full schedules of production of essential military supplies, whether caused by business complacency or by strikes, can and should be avoided, for they gravely endanger the safety of the Nation. Our greatest possible national effort must be made, not for the sake of other countries but primarily for the sake of and to insure our own security. Either the spread of lawlessness in the world must be brought to a halt or we shall soon find ourselves surrounded by aggressors and compelled to fight, virtually alone and against great odds, for our own national existence.

These are obvious dangers that lie immediately ahead. But they are not the only dangers. To get a more complete picture of what they involve, it is necessary to envisage the kind of an economic world that would exist if the would-be conquerors were to win. Their current pronouncements and practices provide an ample warning on that score.

The key to their economic program is contained in one simple word—"conquest." Every territory that they conquer is reduced forthwith to an economic master-and-slave relationship. The economic structure of the enslaved country is forcibly reshaped and systematically subordinated to the economy of the ruling country. Within the entire tributary area autarchy or economic self-sufficiency is set up as the central feature of economic policy. At the center of this widely dispersed web of captive nations the master country wields its vastly enlarged powers in an unceasing effort to ensnare, overwhelm, and enslave every remaining free nation in the world.

The tragic experience of the conquered countries of Europe provides unassailable evidence of how this system is applied in the field of trade. Under it, trade is reduced essentially to enforced barter. The would-be conqueror forces delivery to him, at his own price, of the goods he wants, and enforces this arrangement by every device of discrimination and arbitrary control. There is not the slightest pretense of promoting mutually profitable trade with other countries upon the basis of equality and fair dealing. It is a system based upon the principle not of economic cooperation but of economic spoliation.

In the face of these facts, no one need be in doubt as to the situation that would confront this Nation in the realm of trade, as elsewhere, in the event of an Axis victory. For the past 7 years our Government has taken the leadership in an effort to reopen the channels of international trade and thus to assist in world economic restoration, with resulting political stability, from which all countries, great and small, would benefit. It has proceeded throughout upon broad principles of cooperation and fair dealing, and has recognized that only mutually profitable trade can be truly beneficial and enduring. These principles are broad enough to include every country willing to cooperate in a program of economic peace. By the same token they stand at the opposite pole from the predatory policies and methods of the totalitarians. Between the two systems there can be no workable adjustment.

After the first World War an attempt was made to reorganize the world on a sound basis. New institutions were created and new methods of cooperation were established. All peoples shared the hope that a new era in international relations had begun.

Unhappily, shortly after the close of the World War, power fell into the hands of groups which advocated political and economic nationalism in their most extreme forms. The inevitable effects, politically, economically, and socially during the years that followed were utterly disastrous. The outcome was division and weakening, and final break-down of the necessary international foundation on which peace is based.

Knowing these facts as we do, it is none too early to lay down at least some of the principles by which policies must be guided at the conclusion of the war, to press for a broad program of world economic reconstruction, and to consider tentative plans for the application of those policies.

The main principles, as proven by experience, are few and simple:

1. Extreme nationalism must not again be permitted to express itself in excessive trade restrictions.

2. Nondiscrimination in international commercial relations must be the rule, so that international trade may grow and prosper.

3. Raw material supplies must be available to all nations without discrimination.

4. International agreements regulating the supply of commodities must be so handled as to protect fully the interests of the consuming countries and their people.

5. The institutions and arrangements of international finance must be so set up that they lend aid to the essential enterprises and the continuous development of all countries, and permit the payment through processes of trade consonant with the welfare of all countries.

Measures taken to give effect to these principles must be freely open to every nation which desires a peaceful life in a world at peace and is willing to cooperate in maintaining that peace.

Such a program has strength and endurance. It will stand long after the war-built arrangements forced on disheartened or imprisoned peoples by military conquest have fallen to pieces and have vanished utterly.

There still are people who do not see that if, when the present conflict ends, we do not have a system of open trade, they will not be able either to buy or to sell except on terms really laid down by the military forces and political authorities of the countries with which they have to deal.

Unless a system of open trade becomes firmly established, there will be chronic political instability and recurrent economic collapse. There will never be peace in any real sense of the term.

In the final reckoning the problem becomes one of establishing the foundations of an international order in which independent nations cooperate freely with each other for their mutual gain—of a world order, not new but renewed, which liberates rather than enslaves.

We shall not be able to do this until we have a world free from imminent military danger and clear of malign political intrigue. At present the world is scourged by both. We can expect no healthy development until the menace of conquest has been brought to an end. Only then will the time have arrived when steel is valued not in terms of the bombs that can be made of it but in terms of the instruments of peaceful life into which it can be forged, and when foreign trade has reverted again from cargoes of weapons and explosives to commodities that nourish and heal and enrich their consumers.

This Nation is resolved to evade no issues and to face harsh facts. We believe that there can be created a safer and more prosperous world. We have the tools, the resources, the brains, the hands with which to help make it such. But first the tide of force must be turned back. Once that is done, we and other nations can reestablish an open, cooperative economic life in which trade may increase, economic welfare may grow, civilization may advance, and the peaceful and benevolent instincts of masses of now prostrate people may once more flourish in the really worthwhile ways of life.

Resolution To Create a Fact-Finding Committee To Visit Nations at War

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

Mr. LUDLOW. Mr. Speaker, by request of Hon. Charles G. Binderup, an esteemed former Member of the House of Representatives from Nebraska, I have today introduced a joint resolution for the creation of a special committee to investigate economic, political, and social conditions of all European nations involved in the war. In order that the people throughout the Nation may have an opportunity to become acquainted with this proposal of our former colleague, I present the text thereof for printing in the CONGRESSIONAL RECORD, as follows:

RESOLUTION PROVIDING FOR SPECIAL COMMITTEE TO INVESTIGATE ECONOMIC, POLITICAL, AND SOCIAL CONDITIONS OF ALL EUROPEAN NATIONS INVOLVED IN WAR

Whereas it is not only important but absolutely necessary that the Government of the United States, in order to properly and justly formulate its program with reference thereto, have as complete and definite information and knowledge as to the economic, political, and social conditions existing in foreign nations with whom we have international relations; and

Whereas the Government of the United States has heretofore recently sent special representatives to England and the British Isles for the purpose of ascertaining the true conditions existing in the British Empire; and

Whereas these representatives, together with private citizens who have gone to England on volition, have made confidential reports to the executive department of our Government with reference to the economic, political, and social conditions in the British Isles; and

Whereas it is equally necessary that the Congress and executive department of our Government have similar information with regard to other European nations, including those recently subjugated by the Axis Powers: Now therefore be it

Resolved, That a special committee composed of six members of the majority party in the United States Senate, four members of the minority party of the United States Senate, six members of the majority party of the House of Representatives, four members of the minority party of the House of Representatives, be appointed by the President of the Senate and Speaker of the House, respectively, to represent the Congress, and of five persons appointed by the President of the United States; and be it further

Resolved, That this special committee be instructed to make personal investigations of the economic, political, and social conditions of each of the nations of the European continent, including those nations recently subjugated by the Axis Powers; and be it further

Resolved, That, as soon as the committee shall have been appointed, the committee shall proceed to organize by electing one of its members as chairman and one member of the committee as secretary, and that thereupon the committee shall divide, the chair-

man designating certain members to visit designated nations of Europe, and the member so designated shall personally and fully investigate the economic, political, and social conditions of the nation assigned to him and shall make a full and complete report of his investigation to the full committee. When all members have made report concerning nations assigned to them, the chairman of the committee shall make a full and complete report to the President of the United States and also to the Senate and House of Representatives of the United States; and be it further

Resolved, That there shall be appropriated out of money in the United States Treasury, not otherwise appropriated, an amount of money necessary to cover the expenses incurred by this special committee, not exceeding the sum of $———.

Shall the United States Enter the European War?

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the senior Senator from Ohio [Mr. TAFT] on Saturday evening, May 17, 1941, on the subject Shall the United States Enter the European War? It is an able address, which I hope will be widely read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans of the radio audience, the question whether we shall aid Britain, by convoys or otherwise, is no longer the issue before the American people. We are aiding Britain today in every possible manner short of war. The real question is much more fundamental—shall our aid to Britain be short of war, or shall we declare war on Germany if that course will be of assistance to Great Britain? The arguments for war and convoys are carried on with furore and emotion, and bitter vituperation against those who disagree. I want to discuss the problem with you tonight calmly, as I see the logic of the situation and the true interest of the American people.

EMOTION DOES NOT JUSTIFY WAR

History has shown that war sentiment is usually animated, not by logic, but by an unreasoning emotion. Today there is an intense hatred and resentment of German outrage. I sympathize with that feeling. I detest every utterance of Hitler and every action of the German Government in the last 8 years. Our prejudices are surely justified but we should not be guided even by a justified prejudice. I would cheer on an individual who entered a fight because of such prejudices and emotions, and I would call it chivalry. But a nation is not an individual. It should not be moved by the same motives which properly inspire an individual. Your leaders must consider the interest of 130,000,000 other Americans. What may be brave and chivalrous for an individual to undertake may be completely selfish for a nation or a nation's leaders. It is not unselfish for you and me to send other people's sons, as well as our own, into the holocaust of modern war. It is not unselfish for college professors to send their students to war even in a holy cause. I am tired of those editors and statesmen who look on war as a game to be played with 130,000,000 pawns. We have the duty to consider the interest of all our lions of foreign people in other parts of the world. We must face the results of plunging into war. We must determine whether war is really in any way in the interest of the men and women and children in the great industrial cities, in the towns, and on the farms of the United States.

THE ADVOCATES OF CONVOYS ARE ADVOCATING WAR

The immediate interest of the country is in the question of convoys, but it is obvious that the use of this term only conceals the real issue, for President Roosevelt himself has said, "Convoys mean shooting, and shooting means war." Senator PEPPER, regarded as a mouthpiece of the administration, made a speech last week in Congress openly advocating our participation in the war, with convoys as the first step. The so-called Fight for Freedom Committee, which would be small indeed if we eliminate the editors and writers and college professors, is publishing full-page advertisements saying "We urge the use of our mighty naval force to hold the seas of the world against the enemies of the world. Let's wait no longer." For some reason, editors and columnists and professors, who have never run a government or even a business, seem to be more moved by war emotion than the plain, average citizen who will have to do the fighting. There are not many of these brain trusters, but they are the most vocal part of the population.

Secretary Stimson last week advocated the use of our Navy to make the seas secure for the delivery of munitions to Great Britain. Of course, that means the destruction of German submarines, airplanes, and raiders which may attack British ships over in European waters. That is frankly war. Of course it would also be directly in violation of the President's express promise made just before the election, when he said, "We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas except in case of attack." Secretary Stimson has always been for war. Even before he was appointed Secretary a year ago he made a speech advocating convoys and other war measures.

Secretary Knox is openly for war. His speech of April 25, in which he says that we have committed ourselves in this world struggle, and are occupying an immoral and craven position in asking others to make all the sacrifice for a victory essential to us, is a reaffirmation of the warlike position Secretary Knox has occupied ever since 1939.

Mr. Wendell Willkie, in his speech at Madison Square Garden, said, "We want those cargoes protected, and we want them protected at once and with less talk and more action." Action means war, and he is criticizing the President for a failure to direct warlike action. Many newspapers are openly for war, and so are many columnists and radio commentators. The people have come to realize that the issue, War or Peace? is here today for their decision.

IMPORTANCE OF CONVOYS IS GREATLY EXAGGERATED

At the present moment this issue is still slightly camouflaged behind a demand for convoys. It is said that there is no use in manufacturing munitions and giving them to England unless we are prepared to guarantee that they are safely delivered in England. I suspect that the real purpose of advocating convoys is to provide an effective means of getting us into the war, rather than any concern about the arrival of our munitions. For it has now been made clear that in the first 4 months of this year less than 4 per cent of the ships carrying munitions from this country to Great Britain were actually sunk. These are the figures of the United States Maritime Commission, confirmed by the experience of the American Red Cross. When we consider also that our most valuable aid to England today is the supplying of bombing planes, and that these planes are flown over under their own power, the actual percentage of destruction is even less than 4 per cent. Furthermore, there is no assurance that if we convoy we can prevent sinkings, although we may somewhat reduce them. Apparently a considerable percentage of our munitions is destroyed after their arrival in England by the bombing of ships, docks, and warehouses in the harbors. Our convoys cannot prevent that destruction.

If what the administration wants to do is to aid England, it can accomplish a great deal more by speeding up production and eliminating strikes and providing a sensible Government set-up in Washington to secure that result. The argument for convoys is not sound, anyway. There is no reason why, because we choose to aid the British by making available in this country, free of charge, unlimited quantities of munitions, we should also assume voluntarily the burden of delivering those munitions in England and thereby go to war in England's behalf. England has more than half the merchant shipping of the world, a larger navy than we have, and control of the seas as much as seas can be controlled under modern conditions of warfare.

Think what the argument for convoys really implies. If it is sound to say that there is no use supplying munitions without delivering them, then it is just as sound to say that there is no use delivering munitions if the British have not enough men to handle them. Once we have convoys, the argument follows inevitably that we must send our Army to handle the growing flood of American munitions. Nothing is said now by the British about any shortage of men, but after a year and a half of war they have only been able to get a mixed force of 500,000 men to Africa, where they certainly need a million men today. The cry for men will follow the cry for convoys.

According to Secretary Stimson and Secretary Knox, convoys are a necessary result of the policy established by Congress in the Lease-Lend Act. But when the act was before Congress its advocates promised that it implied no convoys and would in fact prevent a war, synonymous with convoys. The act expressly provides that it shall not be construed to authorize convoys. It expressly forbids the sending of American merchant vessels to carry lend-lease material through the war zones. Surely even our warlike Secretaries cannot claim that the President has any right to convoy the vessels of foreign nations through the war zone in such a way as to involve the United States in war. The argument for convoys is a mere smoke screen for war. Step by step the advocates of war have led the country closer and closer to the precipice, always maintaining that at heart they are really for peace. Now the mask is off.

REASONS FOR AND AGAINST WAR

While I resent the tactics which have been pursued by the war party, I do not lightly dismiss the arguments which they now make for our entrance into war. You who listen tonight must examine those arguments without prejudice, in the light of the ultimate true interest of the American people.

What would we gain by entering the war, and what dangers would we avoid? For

many years the leaders in this country, of every party, have asserted that America should never go to war unless an attack is made on this continent. Shall we now depart from that established policy by going to war with a country which has made no attack on us, and whose violent language only matches our own?

IT WOULD TAKE MANY YEARS TO CRUSH HITLER

It is said that Hitler must be crushed and fascism eliminated from the world. Can this be done? I am no defeatist. I feel confident that England can defend herself against German attack. I think she can build up an air force which will do to the German cities what the Germans have been doing to the English cities. When that occurs I believe that a more satisfactory peace can be made than could be made today. But that is very different from crushing Germany. How are we going to crush Germany even with air superiority, when we see how England is defending herself today against air superiority? How can we finally crush Germany except by landing an armed force on the Continent of Europe? That may be easy for columnists to do in the newspaper, but it would take many years to build up an army that could do the real job. It would take class after class of American boys now still in their teens. War is costing England $25,000,000,000 a year; it would cost this country $50,000,000,000 a year. After 5 years what would be left of our economy or our prosperity when we had spent ourselves into bankruptcy? And then we could not be sure that we would finally be able to crush Germany.

EVEN IF WE WERE SUCCESSFUL, IT WOULD MEAN A PERPETUAL POLICING OF THE WORLD

Suppose, however, that we were able to do it. What are we going to do about it after that? There are 80,000,000 German people. Our most vociferous warriors do not propose to wipe out that people. They will remain the strongest people on the continent, and the most numerous except the Russians. If we wish to protect the small democracies, we will have to maintain a police force perpetually in Germany and throughout Europe. Secretary Stimson, Dorothy Thompson, and Henry Luce seem to contemplate an Anglo-American alliance perpetually ruling the world. Frankly, the American people don't want to rule the world, and we are not equipped to do it. Such imperialism is wholly foreign to our ideals of democracy and freedom. It is not our manifest destiny or our natural destiny. We may think we are better than other peoples, more competent to rule, but will they think so? Will they welcome an Anglo-American benevolent despotism any more eagerly than a German despotism? The inevitable result of what the war party is urging on this country is an American Empire, doing what the British have done for the past 200 years. But our people don't want to be emperors even if they could be.

There have been wars in Europe for a thousand years. There will probably be wars for years to come. Europe, its varied peoples and its small democracies, must work out their own salvation. No outsider can permanently aid them. We may think we know what the European arrangement should be, but we cannot impose it on Europe if we would. The British Empire is the greatest and wealthiest people in the world, but if it could not stand today without our going to war to bolster it up, then I doubt if it could long stand even with our aid.

WAR IS NO AID TO DEMOCRACY

In short, those who talk about entering the war do not think their program through. War is vain. We may favor freedom and democracy in every country in the world, but no one has ever changed the philosophy of other peoples for the better by conquest. No one has been able to impose for long a form of government on any people which does not wish it or is not suited to it. Today we hear again the blaring trumpets which demand that we make the world safe for democracy. We tried that in 1917, and out of that war grew more "isms" and autocracies and violent dictators than we had seen for a hundred years.

Far from safeguarding democracy, war is likely to destroy democracy right here in the United States. Congress today is abandoning the constitutional safeguards. It is granting unlimited powers to the President and Jesse Jones, and the Executive departments. A great war debt imposed on our present huge debt would probably break down the whole free-enterprise system on which the American type of freedom has depended. Some of these powers will end at the end of the present emergency, but if the war lasts for 5 years I doubt whether we ever will return to our constitutional system. I believe that there is only one justification for war, and that is the defense of the Nation and its freedoms against foreign or domestic enemies.

HITLER CANNOT INVADE AMERICA

The strongest argument for war made today is the claim advanced by Secretary Stimson that if Britain should be defeated we would be helpless against an attack by Germany, Italy, and Japan. The President denounced Colonel Lindbergh as a defeatist because he said that England cannot defeat Germany. But the real defeatists in this country are Secretaries Stimson and Knox, who say that this country, with the greatest natural resources and the greatest productive capacity in the world, is unable to defend itself without the British Navy. They assert that for a hundred years we have been hiding behind the British Navy, and that our naval policy has been based on that Navy defending our Atlantic coast while we defend the Pacific coast. But this is a complete misrepresentation of the actual facts. The British Navy has not always been friendly during the past hundred years. Since 1900 we have assumed the British would not attack us, but we have built a fleet able to defend us against any other nation or combination of nations, and built the Panama Canal so that it can move from one ocean to the other on an interior line. Today that Navy is twice the size of those of Germany and Italy combined. We are this year adding at least two of the most modern battleships, while the German and Italian fleets are being steadily injured and depleted. Our Navy is larger and more effective than the Japanese Navy.

I shall read what seems to be the heart of Secretary Stimson's argument because it illustrates the unsoundness of his position. He says:

"So long as the Atlantic and Pacific Oceans are under our own or a friendly control, their broad waters constitute an insuperable barrier to any armies which may be built up by would-be aggressor governments. But that condition of friendly control is imperative. If it should be lost, the oceans overnight would become easy channels for the path of attack against us."

With due respect, this proposition seems nonsense to me. It entirely ignores the recognized fact that a navy, to attack across an ocean, must be twice as large as the defending force. It ignores the fact that a naval attack on our Atlantic coast, defended by our Navy, is dismissed as impractical by every naval expert. An ocean is the most effective barrier of defense that the world provides. It is not necessary for us to control the European side of the Atlantic in order that we may defend the American side of the Atlantic. We do not today control the waters of the western Pacific, and yet our Pacific coast is perfectly secure. Think what Secretary Stimson's statement would involve if it were sound. It means that we and our allies, or we ourselves, must forever control all the oceans of the world, and by force prevent any other nation from building a navy able to go to sea and challenge that control even off its own shores.

Our Navy today can prevent a German army coming to South America. We are building, and can continue to build, a navy sufficiently strong to defend the American Continent against military or naval attack. We are adding two of the most modern battleships this year, while the German and Italian Navies are being reduced. We have the coasts on which to build as many shipyards as we need, and more steel to build the ships than all of Europe combined. If we stand on the line of the Atlantic and Pacific Oceans, we can so certainly defend that line that no nation will even consider a military or naval attack upon us. That is the only way we can insure peace for future generations of Americans. But if we intend to rule all the oceans of the world, if we say that the English Channel is our boundary, then we are always vulnerable. Under modern conditions of air warfare, England will always present a temptation to the strongest continental power, and we will be engaged in perpetual warfare. England must always interfere on the Continent to protect itself, and we would be drawn into similar interference. From the standpoint of our defense, the British Isles are a vulnerable output. Let us by all means help them to defend themselves, but let us not make war in order to dominate all the seven seas and rule the world.

It is extremely unlikely, I believe, that Hitler would attack this country. The alarmists picture a unified Europe, cooperating with Germany against the United States. As a matter of fact, Hitler will be badly involved in trying to govern a dozen different races in Europe, none of them pleased with his rule. He has a tremendous area to police, and turbulent peoples, including his own allies, who hate the Germans. No man and no race has ever succeeded in ruling Europe for long. To set out for America with the flower of the German Army and leave a smoldering volcano behind him is not a thing that any reasonable man would do. Hitler may be mad, but there has been method in his madness. He has little to gain by such an expedition, and all to lose. Napoleon's expedition to Moscow was nothing to such an enterprise. But whether he wishes to undertake it or not, there is no basis for any fear that he can succeed.

A BRITISH DEFEAT WOULD HAVE NO SUBSTANTIAL EFFECT ON OUR FOREIGN TRADE

One other argument is made for our entering the war. That is the argument of Mr. Willkie which is printed in a recent Collier's. It is said that we are wholly dependent on our foreign trade, and that that trade will be destroyed in the event of British defeat, particularly the trade with South America. I assert as vehemently as possible that no American nation should go to war over a question of foreign trade. The tremendous destruction of war is far greater in 1 year than the benefits to be derived by us in 20 years of foreign trade. The whole idea of making war on a country that has not attacked us because some day that country may be a successful competitor for foreign trade is so far from the point of view of the American people that I hardly see how it can be seriously urged even by those searching for a cause of war.

From a trade standpoint, this country is almost self-sufficient. Its foreign exports in recent years have amounted to $3,000,000,000 annually, about 5 per cent of its total income. Of this foreign trade, only $300,000,000, about one-tenth—or one-half of 1 per cent—of our total income, is with South America. It is utterly untrue that a reduction of foreign trade was responsible for the depression or an excuse for the piling up of a huge Government debt. As a matter of fact, our foreign

trade has been substantial during recent years. Undoubtedly, there will be some reduction in that trade when this war comes to an end, but that will be true whether Germany is victorious or Britain is victorious. The impoverished peoples of Europe are going to have to work for starvation wages in any event for a long time, and in many places are going to be able to undersell us. But that is the result of war, not of German victory.

On the other hand, a considerable part of our foreign trade will continue, no matter who wins the war. Three times as much of that trade is with North American countries as with South American countries. Even in South America, our trade in coffee with Brazil, for instance, must continue, because there is no other market in the world which can absorb the Brazilian production of coffee. The same is true of rubber in the East Indies and silk in Japan.

Undoubtedly governments will have more to do with foreign trade in the event of German victory, but I am afraid this is true no matter who wins. Only recently Secretary Hull made a treaty putting the whole coffee trade of the world on a quota system, and incidentally raising the annual cost of coffee to the consumers of this country by $25,000,000. But I see no reason why Government control of foreign trade would result in any greater regimentation or control of free enterprise and free competition within the United States than we already have. Our domestic trade and our domestic markets are larger today than those of the entire world a hundred years ago. We are almost a self-contained unit, and competition is severe in many industries where foreign imports are not now a factor. We can keep a free enterprise system and competition if we wish to. Why not? The whole trade argument is a bogeyman, dangled before us as a cause for war, simply because the average man does not have the figures or the information to reply to it.

"WAR IS HELL"

There are some who say that we are already in the war, but we are not. They will be surprised at the difference if we ever are. We could not stop at naval warfare. We would face all the realities of modern war from which the glamour has gone, and most of the heroism. War today is murder by machine. It is more destructive than it has ever been. It kills women and children as well as men. Five hundred thousand casualties in the World War are nothing compared to what may occur if we once become involved in this war.

For many years we have been building up the standard of living of our people. We have been trying to provide happiness for more people in greater amount. Two years of war will wipe out all the progress we have made. War will wreck trade and finance. A short artificial boom is bound to be followed by depression and hardship and unemployment. The petty difficulties of foreign trade would be a drop in the bucket compared to the inevitable cost of 5 years of war.

A PEACEFUL AMERICA IS THE HOPE OF THE WORLD

And now, today, now we face the choice. Are we going to go beyond the tremendous assistance we can give Britain by a speedy and efficient and unlimited production of war materials, to plunge into the cauldron of European and Asiatic war? If we are involved in protecting Singapore and the Philippines, much less aid and many fewer airplanes are going to England. Are we going to assume the task of maintaining forever a balance of power in Europe? Are we going to join a partnership the avowed purpose of which is to rule the world? Are we going to allow emotion to involve us in a war of which no human being can see the end?

There is only one way in which we can advance the cause of democracy in the world. That is by demonstrating that that form of government is the kind of government which will bring the greatest peace and security and happiness to the people who adopt it; by proving that even in time of war and emergency and crisis the essential democratic processes can be retained.

We have the means of remaining at peace. Up to this time the President has resisted the appeals of those hotheads who would precipitate the Nation upon an uncharted course. If the people back home, you who are listening to me tonight, and millions who think as you do, after calm and reasonable consideration, decide that war is unwise, we have every reason to believe that the President will abide by your decision.

Hope of the World Lies in Youth of the World

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

ADDRESS BY BISHOP BERNARD J. SHIEL

Mr. LUCAS. Mr. President, on last Thursday evening in the city of Chicago a banquet was given in honor of Most Rev. Bernard J. Shiel, D. D., founder and national director of the Catholic Youth Organization. Many dignitaries attended the banquet, including the Governor of the State of Illinois, the mayor of the city of Chicago, former Senator Sherman Minton, and others. I take this occasion briefly to discuss the address because of the inspiration it gave me when I had occasion to read it.

The address delivered by Bishop Shiel is a challenge to the youth of the world. That is the most thought-provoking part of his entire speech, even though he deals with current world events.

Bishop Shiel, who has had perhaps as much experience with the youth of America as any other man in modern times, says that the hope of the world lies in the youth of the world. In that statement I heartily concur.

Mr. President, when the bishop made this marvelous address he must have had in mind what Disraeli, the great Prime Minister of England said many years ago. Disraeli said that almost everything that is great has been done by youth.

I trust that every Senator may find the time in these busy days to read this brief address by Bishop Shiel, and I hope that other Senators may receive the same inspiration from it that I received.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From these experiences have come certain definite conclusions that are now burning convictions, and the most important of these is the problem of education for right human life. Without right education no free people can long endure, and least of all a people committed to the democratic way of life.

Now, the only possible foundation for right human life is the moral law. If the moral law be neglected or ignored, there remains only force, and force can never be the basis of right. Here you have the stark alternatives which always and everywhere confront mankind. Men must be governed either by the law of right, which is the moral law, or they will be governed by the law of might, which is the law of guns and all the other instruments of coercion. But without God there is no support for the moral law, and therefore without God and the moral law there is and can be no foundation for right human life. These conclusions are illustrated and sustained by contemporary history.

Undoubtedly we are living in one of the darkest hours of human history. Never in all the storied ages of mankind was the whole world so convulsed with horrors and atrocities. Wherever we turn our eyes frightful anomalies and incomprehensible absurdities confront our startled vision.

Over part of the world statesmanship is wholly bankrupt. In these nations today the normal processes of civilized life are disrupted. Brute force is the consecrated deity at whose bloody altars these nations worship. The social, economic, and political life of these peoples is little more than a horrid nightmare which appalls and terrifies.

In Europe, Asia, Africa millions of men armed with incredible engines of destruction are marching with one dread thought in their minds, with one hate-inspired purpose in their hearts, with one grim determination inspiring their every deed—to fill the earth with death and destruction.

The smiling valleys and the fertile plains are furrowed, blackened, and poisoned by a rain of shot, bursting bombs, and shell. The highways, the byways, and the fields are choked with the mangled bodies of the finest young manhood of the world. Peaceful villages and majestic cities are reduced to heaps of smoldering debris, under which lie buried thousands of women and children.

This description which falls so short of the frightful reality sounds more like a tale of unbridled savagery or raving madness than the recital of atrocities perpetrated by civilized men. No human mind, however powerful and profound, can fully comprehend the crimson guilt of it. No human tongue, however eloquent, can adequately express the horror of it. No imagination, however fertile and creative, can fittingly depict the blackness, the despair, the measureless magnitude of the tragedy.

But there is little use in complaining about evils unless we seek to ascertain their cause. No evil ever was or can be cured unless we remove its cause. What then is the cause of these portentous evils which threaten the life of peoples and the continuance of civilization itself?

For those who have eyes to see and minds to understand the cause is not far to seek. It is idle to talk about the little puppets—Hitler, Mussolini, and Stalin—who strut their brief day upon the stage of life.

They have their guilt. It is a fearful, diabolic guilt because they have loosed the forces of evil which trample under their brutal feet all the consecrated rights of humanity. What then is the cause? All these nations have banished God and the moral law from their councils and deliberations. For as St. Paul says in his own powerful and graphic language, "When they knew God, they have not worshiped Him as God, nor given thanks. But they were puffed up in their minds and their foolish hearts were darkened. For professing themselves to be wise, they became fools."

The reason is as simple as it is demonstrative. God is truth. He is the source and fountain of all truth. Without God there is

no truth. Consequently when God is banished, truth is banished. When truth is banished, there is nothing left except lying, deceit, and hypocrisy.

This is the precise and exact history of the political world during the past 25 years. All these nations have made solemn treaties with one another and they have violated every article of them before the ink on the paper was dry. They have expressed enduring love and high esteem for one another at the very moment they were preparing feverishly to murder one another. They swear before earth and heaven that never again will they have recourse to arms to settle international disputes and the first time a dispute arises, they wheel out the engines of war.

Can anyone wonder at the reeking brood of multiplied evils, which feed like vultures upon the dead hopes of enslaved peoples? There is only one remedy. Remove the cause. All else is a silly palliative. Restore God and the moral law to the councils and deliberations of nations. The imperative question with which every law, every national policy, every international relation must be confronted should be, Is this in accordance with the eternal immutable principles of truth, of right, of justice, of human well-being, and happiness? Is it in conformity with the divine will and purpose? Let no one cherish the illusion there is any other remedy for the blindness, the stupidity, the reckless malice of those in high places who have all but wrecked the modern world. But some may ask, What has all this to do with education for right human life? I answer—everything. There is only one secure foundation for right human relations and above all for a genuine democracy and that is the great ideas of the fatherhood of God and brotherhood of man. Most certainly if we are all equally the children of a common father without distinction of race, color, or nationality, of social position, economic status, or political organization, then we have the most powerful motives of abiding love, of profound sympathy, and generous good will. Without love of our fellow men, sympathy and good will, right human relations and genuine democracy are fantastic chimeras.

Let there be no mistake about it, the supreme battle of the modern world is the battle for God and the moral law. There are powerful, well-organized forces which are aggressively and violently anti-God. The vast resources of government are employed to uproot from the minds and hearts of peoples the beneficent, constructive ideas of God, religion, and morality.

Over against all that I set the youth of the world. I am profoundly persuaded that the one human hope of the modern world is youth. Eager, courageous, enlightened youth can and will scrap the deadly international policies of lying, deceit, and hypocrisy. By youth, if by anyone, the blatant, shallow, destructive Godlessness of the political world will be swept into the Gehenna of abhorrent things.

We need a generation of young men and women who have an abiding faith in God and in the dignity, the worth, and nobility of human beings. We need young men and women who are athrill with the vision of the greatness, the goodness, the beauty, and the majesty of God and of all the children whom He has created. We need young men and women who will make the moral law the light, the guide, the inspiration of the public conduct of nations.

If we are to stamp out the deadly maladies which threaten to destroy all the decencies, all the amenities, all the culture, all the sanctities which make human life worth living, we must enlist a vast army of young men and women who are ready to battle with every ounce of their strength and energy to establish the reign of truth, of right, of justice, and brotherly love. They must be young men and women who have the dauntless courage, the quenchless enthusiasm to make the powerful and beneficent doctrines of the Master Teacher of the ages prevail over the law of cunning, the studied deceit. They must be young men and women who have an abiding faith in the that falter not, with hearts that quail not, highest ideals. They must march with feet whatever foes may oppose, whatever dangers may threaten. They must pull down the barriers to right human life erected by passion and prejudice. They must storm the strongholds builded by ignorance and vice. They must speak words of cheer and comfort to the sorely tried and afflicted. They must sustain the drooping courage of the faint-hearted.

They must make men realize that no material comfort, not brilliant social position, vast economic powers, or political dynasties, but God and the human soul are supreme. Then will shine again in the darkened skies of human life those polar stars of light and guidance, God and the moral law. Then the downtrodden and enslaved people may look up and be glad for the redemption is at hand.

Louisiana Under Governor Jones

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ADDRESS BY HON. SAM JONES, GOVERNOR OF LOUISIANA

Mr. BOGGS. Mr. Speaker, and my colleagues of the House, under leave to extend my remarks in the RECORD, it is my privilege to submit for the attention of yourselves and the Nation the first anniversary address of Gov. Sam H. Jones, of Louisiana.

This fine address is important in that it recounts in part the amazing record of good and honest government given our people of Louisiana in 1 short year.

It was delivered by Governor Jones on the night of May 13, on the eve of his first anniversary as chief executive of the sovereign State of Louisiana. Following are the Governor's remarks:

My friends, tomorrow is the end of a year. It was an extraordinary year for me. It was an extraordinary year for the State of Louisiana. It was a turning point.

A year ago tomorrow, at high noon, an era came to an end in this State. It was a dark era. You know that as well as I know it. The court records testify to the blackness of the night we escaped from a year ago. Yes; and the mills of the courts have just begun to grind.

So now, a year older than when I became your Governor, I hope wiser, and I know sadder for the trials and tribulations of that year, I go on record as being proud of that year; proud of you; proud of the reforms and improvements which, by your mandate, we have been able to make come true.

But listen: Before I say anything else I want to say the most important thing of all. Before I tick off one by one the hard facts of things done against things promised, I want to say that one thing here looms larger than all others in the eyes of the Nation. That is honesty. We have honest government now. In your heart—no matter who you are, friend or political foe—you know that we have honest government now. And in your heart—whoever you are—I think you rejoice in that enormous fact, because you love Louisiana. After all, honesty was what we fought for. That was what turned an election into a crusade. That was what, above all else, we won.

But, as the old campaigner said, "Let's take a look at the record." The record is written in bold type. I don't believe there is need for any confusion or even for any dispute about it. With the candidates on my ticket, I pledged you 17 specific things. We didn't whisper them or hint at them; we wrote them down, printed them in black and white; and that original platform was distributed by the thousands all over the State. I have a copy of it in my hand.

In the brief minutes allotted to me tonight I am going to try to report to you on the far-reaching reforms and benefits which have come and will come to Louisiana by reason of the forces we have set in motion. I shall use my original platform as my text, as the framework of all I have to say. The story I tell you is incomplete; much must be left out. But if I can give you the feel of the program we have put into effect this year, if I can sketch for you a blue print of things to come for Louisiana in the next 3 years, I shall be content.

Well, what was the first thing we promised? The platform said, End dictatorship and return power to the people. Reestablish the right of local self-government by cities, towns, parishes, school boards, and police juries with no exception and with no State interference.

That was the promise. Has it been kept? Do you know of anyone who hesitates to speak his mind about the Sam Jones administration? Are people afraid to talk now? You know they are not. Do you remember the time when people were afraid to talk—when fear haunted the cracker barrels of our little stores and the rostrums of our meeting halls? You know that you do. You know that the fear and the dictatorship have alike departed. I think some people who really approve our kind of government, deep down, are fussing and criticizing now for the sheer glory of exercising new-found freedom; well, let them; I don't mind.

What about the self-government of cities, towns, parishes, police juries, school boards?

The dictator laws are repealed. The odious law allowing the National Guard to be pulled into politics is no more.

You know that this administration leans over backward to allow the full democratic freedom of these units of government. We have freed the sheriffs' offices from control by Baton Rouge. We shall, however, make one exception to the policy of local option and home rule. Near our university and our great Army camps, gambling and other conditions likely to contaminate the young must be rigorously exterminated. I hope they will be put down elsewhere, too, by the local authorities who have full power to act. And where they need help from the State police, they will get it promptly, as they have gotten it in many parishes. Does that sound like the past? I think you will agree that it does not.

Further, we were so anxious to restore the Government to the people that we saw to it that boards of independent, non-office-holding citizens were set up for each major department, not to boss the head of the department but to advise with him as direct agents of yours and to act as appeal bodies in case of dispute. And best of all, to bring the people into the heart and core of government.

Well, a second plank in my original platform read as follows: "Guarantee fair elections. Guarantee all candidates honest representation at the polls and an honest count of all ballots. Do away with 'dummy' can-

didates, 'dummy' ballots, and 'dummy' registrations, and keep the free poll tax."

Was that plank carried out? In Act 46 of the first session of the legislature, we rewrote the primary election laws to provide clean, fair elections, prevent "dummy" candidates, and otherwise tighten the law. In Act 76 we provided heavy penalties for those selling their votes. In Act 84 we ordered voting machines for the city of New Orleans and paved the way for them in all the parishes; over the next 3 years this administration will have as its aim the installation of voting machines wherever these will materially help—as they will help in New Orleans—an honest count. We abolished the noxious poll receipts and framed a simpler, more efficient registration law.

All right, a third plank read as follows: "Do away with 'ghost boards' and overlapping commissions, saving the people huge sums of money."

If you will read Act 47 of the first session after I was elected you can have no doubt of the businesslike thoroughness with which that pledge was carried out. We took 176 conflicting, overlapping, often very nearly mythical, boards and commissions and we reduced them to 20 clearly defined and modernized departments, plus 2 independent establishments. This will, indeed, save huge sums of money; better than that, it will give us order out of chaos.

A fourth plank was this, I quote: "A fair tax system that will be just to all people. Kill the sales tax that is now on the necessities of life and do away with the tax tokens. Wipe out or reduce nuisance taxes that now strangle small business. Reduce automobile taxes to $3. Have a real homestead exemption that politicians can't misuse."

Now, what about that one? I don't have to tell you that the sales tax is dead, the tokens sold as scrap. You have the $3 auto license we promised you. The small businessman pays one license now. We increased the severance tax, which is not a tax on the poor and which is a sensible way to increase revenue from our vast and growing natural resources. And if you can show me a case where homestead exemptions are now used for the purpose of political pressure, give me the facts and I promise that the pressure will ease—and ease in a hurry. We of this administration consider it a part of our mandate to examine our homestead exemptions carefully in the months to come and try to enlarge and improve them if we can.

The fifth plank read as follows: "Destroy the system of spies who pry into private, civic, and political affairs and threaten free speech."

Now, for you who have eyes to see, it is unnecessary to point out that the old spy system went out on the 14th of May 1940. If we have any spies amongst us, you can be sure they are in the pay of Mr. Hitler or Mr. Mussolini, not of the Sam Jones administration. We do employ a few sleuths—sleuths in the form of expert accountants who are trying to track down some of the missing money which so mysteriously flew away during the lost and repudiated years. I think you approve of that.

And the sixth plank read as follows: Renew the honor of our educational system and redeem L. S. U. by clean, capable management and by taking this honorable institution out of politics. Free school books and free school teachers."

Well, you know that by constitutional amendment we set up L. S. U. as a free and self-respecting university establishment, governed by a board of supervisors; we took L. S. U. out of politics in such manner that it will be very difficult to get this university back into politics over the years to come.

Moreover, there has been a profound reorganization of the department of education. This is now one of the 20 modernized departments. I want you to know that it is making important contribution to the national-defense program. Many trade schools have been added; more will be added to develop skills for defense work. The Federal Government has made more than $600,000 available to trade-school development in the immediate future throughout the State. Many thousands of our young people will be trained under this plan; any youth wishing to receive this training should inquire of the parish superintendent.

In September 1940 a State advisory committee was organized to improve and expand the hot-lunch program in the schools. Now 2,132 schools serve hot lunches—real hot lunches scientificially and nutritiously prepared, not political hot lunches—and 179,606 children get them every day.

The State equalization fund is now $600,000 greater than ever before; many thousands of additional children are receiving the benefits of this special aid. Act 215 of the legislature last session provides for 10 days of sick leave for teachers without loss of pay. Act No. 316 modifies the teacher-retirement law to permit teachers to retire after 35 years of service. New courses of study, new textbooks have been secured to meet the needs of today and tomorrow. Yes, my friends, we remembered the teachers and we have by no means concluded legislation in their behalf. Over the next 3 years we propose to draw other teachers' bills, and finally solve, in a State which lacks the funds of the rich Northern States, the problem of truly adequate teachers' pay.

And so we come to pledge No. 8. I repeat it to you: "Abolish favoritism in State contracts. Establish free bidding and a fair chance for all bidders with no graft for any public official on State work."

My friends, once again I beg leave to remind you that we produced. We did it. And in the doing of it we passed the fiscal code bill, that vital nerve center of the whole new guardianship we have set up over your funds. The department of finance is at once the stern watchdog ever ready to pounce upon fiscal hocus-pocus in any department, and the wheel upon which all the financial transactions of the State revolve.

Under the department of finance, bids are fair to all qualified persons seeking business with the State. That is new. That is what we promised. Prodigious labor, countless hours of toil by many trained people, made possible this tremendous change to the accounting methods of 1941. The best efforts of other States in reorganizing their financial structure were studied. This setup is no untried experiment—it is the result of trial and error in 28 States of this Union along the same line; it is the result of the best brains we could get, from in the State and outside the State.

It is as if we changed from a store in which the clerks made change out of their own pockets and never told one another how business was going, to a great modern department store serving the needs of several million people. Yes; the change, the improvement, was as phenomenal as that.

And still in the department of finance, let's mark "Fulfilled as promised" after pledge eight and take up pledge nine. This one read: "Do away with deadhead officeholders; cut the padded pay rolls, and allow no politician to draw the salary of more than one man."

My friends, we have not only eliminated deadheads but we have sought to prosecute them where possible and regain moneys wrongfully obtained without service. Our new deadhead law prohibits a State employee who makes under $200 from contributing to any political cause. The division of accounts and controls of the department of finance will serve as a bloodhound to ferret out padded pay rolls, deadheads, waste. Now all expenditures are preaudited. This means that no purchase of goods or services is made until this department has checked to see whether the money is available and a voucher giving all details of the transaction is submitted before the money is paid out.

My friends, a deadhead or a double dipper who managed to wangle himself onto the pay roll today would find himself in so much trouble that I think he would give up the effort and go find himself an honest job of work.

And so pledge 9 must be marked "fulfilled" like the others, and we move on to pledge 10; and I read: "Kill the deducts." You who work for the State or have relatives working for the State and hear my voice tonight—all of you know that the "ducts" have flown for the last time. No public employee has one penny deducted from his pay check since May 1940; none will ever have a deduction made. Therefore, pledge 10 must be marked "fulfilled."

Pledge 11 promised to kill the laws which prevent the auditing of public records and open the records of the State and all its departments to the public at any time. Similarly, the next plank, No. 12, asked for honest audits of all State departments, with full publication. Public records now are wide open—by law. You know the condition of your treasury now for the first time and you know from the figures published in every paper in the State that we took office confronting a deficit and that, while we thought this deficit in the general fund would run to four or five million dollars at the end of this fiscal year, we now have it cut to a likely two million while we continue to pare and cut waste while keeping the essential services and adding to them. And listen to this: We have saved something over $2,000,000, by scientific budget control, out of funds appropriated by the legislature. And the savings continue.

Now, as for auditing State departments—well, the supervisor of public funds has audited on a scale never before accomplished in such a short time in any other State. Streams of figures have come out of his office—muddy streams of past malfeasance in some cases, streams which will flow on into the courts. His reports are thorough and they name names and amounts. They are honest public reports. He has just moved his staff into New Orleans for an audit of the affairs of that city.

Promise No. 12—fulfilled. Promise 13 said: "Place the Conservation Department strictly under all provisions of the Constitution. Stop the waste of our natural resources by favorites of the State administration."

Act 195 of the legislature not only opened up the books and records of the Conservation Department but those of all other departments. The fur trappers, the shrimp fishermen, the oil drillers—all of them have found that they can do business now in this State without paying tribute to any politician. Prove it? Well, the value of the fur crop each year is estimated on the actual return to the trappers. The 1939–40 crop was valued at a little over $4,000,000, the 1940–41 crop was valued at a little over $6,000,000. In simple terms, the trappers paid no tribute.

Your conservation laws are being enforced, as can be demonstrated by a few simple figures. As of April 10, 1940, a total of 148 shrimp trawling licenses had been sold; on April 10 of this year, 1,073 such licenses had been sold—and that doesn't mean there were that many more shrimp trawlers. It means the law is being enforced and you know it well.

Yes, my friends, No. 13 has been more than fulfilled, like the rest of them. And over the next few years our Department of Conservation is working toward a model fish and game division, toward the restoration of wild life of all types now depleted; toward better fish hatcheries, the scientific study of methods to replenish our muskrats, our wild turkeys, our quail. In the division of minerals, of course, I have already in many places told you the story of how we have saved the oil

and gas industry a sum conservatively estimated at $15,000,000 by the recycling and spacing methods we have put into effect.

No. 14 says: "Build and keep up hospitals that won't sink, public buildings that won't be shifted about, and paved roads that cost half what they have cost in the past; and real instead of imaginary farm-to-market roads."

Now, obviously we did not build a lot of new buildings in the first 12 months of office, but the buildings that are constructed under this administration won't sink or travel about. And we have a Department of Highways now that will build its roads for what the roads cost, not for what some politician costs; a Department of Highways whose director is a man widely beloved and addicted to a policy of telling the people what is possible on the funds available and what is not. The Federal Government will build and improve vital military roads as it is now doing.

You should know these things—the highway department gets from all sources about $17,000,000 a year. Fully half of that amount goes for the servicing of inherited debts. Think of it! Half of the highway appropriation pays the toll on past extravagance, past waste. Meantime, while we are hoisting this department out of financial chaos, we must make what money we have go further per dollar than ever before. We are doing that. Listen carefully to this, my friends: The highway department is pledged to go into the forgotten rural areas and build cheap roads where roads have been neglected. We have allotted $10,000 per year to each parish for this purpose—in a new way. We are letting the police jury of each parish pick the routes—thus bolstering home rule again and squeezing Baton Rouge politics out of the picture.

And mark well that your department of highways has played a lively and constant part in securing for you the tremendous defense facilities, the great camps, and the maneuvers on the grand scale which will come to us this fall. The highway department, cramped for funds and knowing full well that the maneuvers would cause serious damage to many roads, nevertheless pitched in with the Army engineers and said: "Come on; we'll do our part. Better for your tanks to cut up some roads than for us to lose these things—and maybe lose democracy, too." We know how it hurts to lose democracy in this State.

And I want to emphasize again that Louisiana did not get more defense-training facilities than any other State through accident. As our President once said: "We planned it that way." We are now in the best position of any State in the South to get subcontracts for defense manufacturing; we planned it that way. The police jurors, the mayors, and other parish officials rallied to my side and we sent "Big Bill" Knudsen the most complete manufacturing census of any State in the Union. We were the first on the scene with the facts—and we will add to the $200,000,000 in capital outlay coming to us from Washington for defense, and we will add to 50,000 new jobs we have secured for the unemployed through this work.

No. 15 is the pledge to strengthen the social-security system. Did we do this? We have merely added 7,000 beneficiaries and $1,000,000 in benefits, while actually spending less money because of efficient budgetary control. From the day I was inaugurated I have worked closely with members of the Louisiana congressional delegation to urge passage of a bill, introduced by a Congressman who endorsed the policies of this administration, which will make $30 old-age pensions a reality instead of a political football. I believe those $30 pensions are nearer than ever before. In the decade before the Sam Jones administration came into office, all pension efforts failed. No State of the financial strength of Louisiana could pay all alone the $30 pension without ruinous taxation. Working with the Federal Government, sharing the cost in the manner that I urged all through my campaign, the pensions can be paid. I honestly and sincerely believe we are going to succeed in the efforts we are now making to bring these pensions. I shall frankly tell you always of the progress we are making in the campaign for the pensions.

The sixteenth plank was a labor plank, urging cooperation between capital and labor and all the traditional rights of organized labor. I believe the tranquil relations between these groups in Louisiana, contrasted with strife and turmoil in some other States, is proof that this promise too has been fulfilled. And finally there was a pledge to agriculture, to increase prices so far as possible and aid market facilities.

My friends, this administration is undertaking the broadest program of State-financed aid to farmers ever hatched in Louisiana. The Secretary of Agriculture is cooperating fully in the plans we have made together and besides working for a banking policy that will grant loans on more than one crop, we are seeking to provide the first uniform and common-sense plan for getting the farmers' crops to the market—particularly the Army camps—and getting them sold there.

The last pledge was to take the ports out of politics. We have a dock board now with a membership recommended by leading nonpolitical groups—and by the way, our deadhead law removed 2,000 of them from the dock board, to which they won't return, I promise you, just before an election.

Well, my friends, there are the 17 promises of Sam Jones and his ticket. And here is the score: Sixteen fulfilled to the hilt and one being constantly promoted in a campaign to fulfill it to the hilt, too. I have given you simple facts, simple proof; the record is plain for all to see. I wish I could dwell on the fine work of the Collector of Revenue, who has cut his collection costs nearly in half and is collecting taxes with twice the efficiency of his predecessors, as the records show. I wish I had time to describe the splendid drainage program of the department of public works, but the clock presses.

A year ago I predicted I would make mistakes. My friends, I have made them—the kind I said I would make, of the head, not of the heart. We of this administration will make more such mistakes, being human; but we will try to keep the balance in favor of progress and success for Louisiana.

Now we are involved in a great defense emergency. I urge you to forget political fireworks for a while and join with me in a common unity of purpose. We can be proud already of our part in defense. The great Selective Service System of the Nation was based on the Louisiana plan, and we have administered the system in this State with a method and morale unsurpassed in all the 48 States. Washington knows that, knows that Louisiana is the nerve center of troop training in this Nation straining to prepare.

This administration knows the grim test for all of us which lies ahead. Come and let us meet it together. We struggled to make Washington see the light and give us Claiborne, Polk, Livingston, and Beauregard; all the air bases, recreational centers, shipyards which are here and on the way. They are a great responsibility. I ask you, for the period of this emergency, to give me your hand in a common bond of determination and unity. Will you do that? I know you will. God bless you all.

A Basis for World Peace

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, let me say in reply to the gentleman from Pennsylvania [Mr. RICH] that the overwhelming majority of the American people want to stay out of war, an overwhelming majority of the Members of this Congress want to stay out of war.

The President of the United States has said again and again and again that he wants to stay out of war.

Last night Secretary of State Cordell Hull laid down the following five points as a basis for world peace:

1. Extreme nationalism must not again be permitted to express itself in excessive trade restrictions.
2. Nondiscrimination in international commercial relations must be the rule, so that international trade may grow and prosper.
3. Raw material supplies must be available to all nations without discrimination.
4. International agreements regulating the supply of commodities must be so handled as to protect fully the interests of the consuming countries and their people.
5. The institutions and arrangements of international finance must be so set up that they lend aid to the essential enterprises and the continuous development of all countries and permit the payment through processes of trade consonant with the welfare of all countries.

I cannot see why any country on earth cannot accept those terms. They all say that is what they are fighting for. Let us put them to the test.

This morning's papers carry the statement that the people of France, bleeding France, the best friend we ever had when we were in trouble and needed a friend, is appealing to us to take steps to bring about peace, and suggesting that President Roosevelt take the lead.

I believe if he would do that, he could bring this war to a close and in that way make himself the most popular leader in the world.

I fear it is the only way to save the British Empire. If we should get into the war, there is no place for us to land an army in Europe; and if we landed one and drove to Berlin, as we would have to do to crush Germany, it would exhaust the manhood and resources of this Nation and soak the soil of Europe with the blood of probably 5,000,000 of our best young men.

Even if we could get everything we are now producing over to England, she probably could not get onto the Continent. It would merely save her from collapse, if it did that. A peace based upon these five points of Cordell Hull's would save Great Britain now.

I call upon the Christian people of this country, the ministers, the mothers, the fathers, to get behind such a movement and let their voices be heard in support of Cordell Hull and President Roosevelt in this movement for world peace.

Labor's Rights Under the Defense Program

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1941

ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN

Mr. HILL. Mr. President, on Friday night, May 9, 1941, a dinner was given in honor of Senator ROBERT M. LA FOLLETTE, Jr., by the Workers' Defense League, a national nonpartisan defense organization devoted to the vigorous defense of labor's rights throughout the country. At this dinner, held at the Town Hall Club in New York City, which was attended by some 500 leaders of labor and liberal thought, and to which many distinguished men and women sent their greetings, a bronze plaque of honor was presented to Senator LA FOLLETTE for distinguished service in behalf of labor's rights. This tribute was accorded the Senator because of his chairmanship of the subcommittee of the Senate Committee on Education and Labor, known as the Civil Liberties Committee or the Senate Subcommittee on Violations of Free Speech and the Rights of Labor.

During the forum on Labor's Rights Under the Defense Program, which took place in the course of the dinner, Senator LA FOLLETTE addressed the audience and a larger audience over National Broadcasting Co.'s WABC. Since his remarks are of special moment in this period of national emergency, I deem this speech, as well as the tributes paid by speakers and others to the work of the Senator and of the Senate's Civil Liberties Committee, worthy of incorporation in the CONGRESSIONAL RECORD. I therefore ask unanimous consent that Senator LA FOLLETTE'S speech, and the introductory speech of Mr. Clendenin in tribute to Senator LA FOLLETTE, be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

In presenting the plaque to Senator LA FOLLETTE, Mr. David L. Clendenin, national secretary-treasurer of the Workers' Defense League, spoke as follows:

"Among the many testimonials and greetings we have heard this evening, Benjamin Marsh recalled in passing, how the idea of a Senate investigation of violations of civil and labor's rights came about. I recall with pardonable pride that it was the same set of facts—the cruel flogging, resulting in the death, of Joseph Shoemaker in Tampa and the night riding and terrorism directed against the sharecroppers—which at about the same time gave rise to the formation of the Workers' Defense League as an organization dedicated to the courageous, nonpartisan and militant defense of labor's rights.

"With the appointment of the Senate Subcommittee on Violations of Free Speech and the Rights of Labor, under your chairmanship, those who had been trying to do their bit to preserve and extend our democratic rights knew that here was a great and powerful ally.

"Despite every discouragement, despite every obstruction placed in your way, your committee hewed to the line and performed its great task. When corporations and powerful employers' associations sought to interfere with your work, you courageously persevered and exposed the great evils implicit in their labor policies. You uncovered the facts about industrial espionage, you brought to light the criminal use of munitions in industrial disputes, you laid bare the vicious employment of professional detective agencies, of hired strikebreakers and mercenary and criminal strike guards.

"If this were all your committee had accomplished, labor and the friends of liberty would be eternally grateful. But in addition your committee was responsible for the introduction of national legislation to outlaw the brutal practices which your investigations had exposed.

"Such an investigation, the scope and thoroughness of its work, is a tribute to the perseverance and courage of the committee, and especially of its chairman. It is moreover a tribute to the honor and respect with which the American labor movement looks upon you.

"Valiant son of a valiant father, battler for labor's rights and the liberties of the whole American people.

"For this distinguished service in behalf of labor's rights the national executive board of the Workers' Defense League has voted unanimously to award you this bronze plaque of honor. It is with great pleasure and a feeling of personal privilege that in behalf of the Workers' Defense League, I present this plaque to you, ROBERT M. LA FOLLETTE, Jr."

(Senator LA FOLLETTE'S speech follows:)

I accept with thanks this token of recognition from you who have yourselves dedicated so much time, energy, and courage to a cause for which we share a mutual regard—the defense of labor's civil liberties. Naturally, I deem this not a tribute to me, but rather to the work of the subcommittee to which many persons have contributed. Particularly I should like to pay tribute to the unselfish and zealous cooperation of the senior Senator from Utah, the Honorable ELBERT THOMAS, who has served with me for the duration of the entire 4 years of laborious investigation.

I shall speak personally tonight and not as a member of the Senate Civil Liberties Committee. Nor shall I relate its history and contribution. The public record of its investigation will speak for itself in the seventy-odd volumes of testimony and exhibits, the 12 volumes of reports to the Senate, and the additional reports on its last and concluding investigation on the west coast which will be shortly forthcoming.

An undeniable record of violations of labor's rights has been revealed. Corrective legislation in the form of the so-called "Oppressive Labor Practices Act" was submitted during the last session of Congress and acted upon favorably in the Senate, but did not get to the floor of the House. Recommendations for additional legislation will be submitted in the committee's final report. Your consideration of these measures is invited.

Today the Nation is preparing to defend our free institutions from a serious menace—political totalitarian dictatorship. It is fitting, therefore, that we consider the relationship of labor to democracy and national defense. In my opinion, trade-unions, democracy, and freedom from dictatorship are synonymous. A political totalitarian dictatorship cannot exist alongside of free trade-unions. The reverse is equally true. Let no American be deceived on this score.

The first step, the sure sign, the essential aggression of every dictatorship that seeks to destroy democratic institutions is to strike down free trade-unionism and with it the right of labor to speak their protests against economic underprivilege, to assemble together and organize for joint action, and to bargain collectively with the managers of industry, be they private or public.

The right to picket and the right to strike, which constitute the chief bargaining weapons labor possesses, are outlawed; the leaders of trade-unionism are marked for political persecution of a thousand varieties; and some fake form of controlled labor front which is a version of a company union controlled by the State, is substituted for the free trade-union. It is the pattern in Germany, Russia, and Italy today. Our first concern must be to prevent this pattern from being fastened on American labor in this critical hour of decision.

Hence, labor's rights and national defense are inseparably linked; they are mutually supporting, damage to either in a democracy may be fatal to both; the furtherance of each strengthens both. No informed American who can free himself from the prejudice of his personal economic status and think in terms of the national interest will deny the truth of this analysis.

In my considered judgment, the most dangerous menace to labor's civil rights and a continued all-out productive effort for national defense is the drive to weaken and destroy those rights by legislative enactment. Under the pretense of promoting national defense a group of persons are working to pass a death sentence on industrial democracy. The Nation at large is either asleep to this danger or numbed by the obvious propaganda that has reached a new high in promoting national disunity under the pious garb of patriotism.

We cannot save democracy by destroying it at home. It would be one of the tragic ironies of history if, in the process of preparing for the defense of our national democracy, we blindly sacrificed it in a legislative lynching bee. This would be the inevitable result of many of the labor bills being introduced under the color of defense in Congress and the various State legislatures. The record of their sponsors in the press and CONGRESSIONAL RECORD will indicate that they are antilabor in their origin. The passage of these bills would be the first token of appeasement to the dictators, at home and abroad.

The stupid folly of this proposed congressional hari-kari would indeed be a confession that democracy cannot survive in a crisis; that free men cannot outproduce slaves.

Let not the men and women of America who do not value these rights of labor delude themselves that their sacrifice would save democracy for the rest of us. Other rights, equally valued, would soon be sacrificed. Let the fair-minded employers, the fair-minded newspapers, and the average American who values his political, religious, and intellectual freedom, rise up and be counted in the ranks of those who hold a respect for labor's rights to be a part of national defense. Any program of national defense that does not give our great mass of citizens a faith and conviction for which they will give their all will prove a sham and a delusion. We have already heard the words of Ernest Bevin, speaking of the heroic workers of Britain who each day are giving

the lie to those who say that the liberties of labor must be sacrificed on the altar of national defense. Those words are:

"Let bitterness and discontent get into the hearts of my army and then, by God, we've lost the war."

There is a second phase of sound public policy which is derived from this relationship between labor's rights and the national defense. Those who sincerely wish to promote the national defense through a maximum industrial production free from work stoppages because of industrial disputes will further a quick and vigorous extension of collective bargaining to defense industries. The so-called defense industries are now only about 30 or 40 percent unionized, according to conservative estimates. Many of our vital plants are lacking in the employer-employee machinery conducive to an avoidance and settlement of disputes that may, regardless of any law, lead to work stoppage or inefficiency.

The voluntary collective agreement between employer and union containing provisions for voluntary mediation and arbitration before strikes or lockouts is now recognized as the best possible insurance against work stoppages. Every such collective agreement is a pillar in the arsenal of democracy.

The converse is true. Every absence of a collective-bargaining agreement, every refusal to bargain collectively constitutes a threat to production for national defense. In the defense industries the situation is particularly serious Powerful groups having dominant positions in the defense industries have for years devoted their time, their money, their energy, and their great influence to prevent the exercise of labor's rights, to avoid collective bargaining and to violate the law of the land which has been on the books since 1935 This is not a loose statement. The record of the Senate Civil Liberties Committee shows that a large percentage of the companies involved in strikes officially listed today as affecting national defense, have been guilty of violations of the civil rights of their employees and recalcitrant in their attitude toward our national-labor policy.

I am peculiarly aware of the dangerous consequences of the past conduct of these companies and their present attitude. In the course of the work of the Senate Civil Liberties Committee I have seen the hearing room grow tense with the recital of past wrongs. I have seen the deep bitterness which such policies of labor relations bring in their train. A refusal to bargain collectively in good faith is of itself an affront and insult to the dignity and self-respect of employees. It rankles, more than that, it never stands alone, because it must be implemented by devices of repression, espionage, company unions, discrimination, and ultimately the purchase and use of arms. Opposition to collective bargaining and the use of such repressive measures poison the employer-employee relationship for years to come. This poison-embittered atmosphere between employer and employee exists in large and important sectors of our national-defense production, and we cannot move too rapidly to correct it.

That is the second way to promote labor's rights and the national defense.

Finally, to protect labor's rights and the national defense, we must treat those serious obstructions to production that tie down our giant industrial power. The cruel fact has been driven home to a shocked world that a nation with a dynamic expanding economy, which uses its human and natural resources to the maximum, will smash physically and philosophically a nation in which human and natural resources, manpower, and capital are not at work producing those things necessary for the problem of the day, be it defense from aggression or the extension of the good life.

We must throw off the shackles of monopoly, business-as-usual methods, an economy of scarcity, an inequitable distribution of the profits of our economy, and the remaining vestiges of a system of employer-employee relationships grounded in an inequality that breeds bitterness and strife. That is the successful method for fighting communism and Nazi-ism at home and repelling any threat of foreign aggression from abroad. Remove these obstructions and there will be a mighty building of the tools of national defense—planes, ships, tanks, and guns—in such quantities and with such common purpose and cooperative efficiency that those over the oceans will take heed and confine their horizons of conquest away from these shores.

It is essential, even under those conditions, that the responsibility, the patience, tolerance, and ingenuity of labor and management must be used fully, heartily, and in good faith to avoid and settle labor disputes without serious work stoppages. Under those conditions, collective bargaining, conciliation, voluntary mediation or arbitration will thrive and succeed in maintaining maximum levels of production. There is no other alternative. Any other course, even though accompanied by the most stringent legislative restrictions of labor's rights, will result in failure in our national-defense effort.

A wise public policy to protect labor's rights and promote the national defense will include:

1. The defeat of all legislative proposals designed to destroy or weaken labor's civil rights.

2. A rapid extension of collective bargaining and agreement procedures throughout defense industry.

3. A removal of the shackles on an all-out production program; and

4. A greater participation on the part of labor and its leaders in the discharge of responsibilities for national-defense production.

First of all, the American people should know who is behind and who stands to profit from this vicious and unscrupulous attack being waged on the rights of labor under the cloak of national defense. The leading behind-the-scenes participants in this shallow scheme to save democracy by putting it on ice are certain organized employer groups who have made it a regular practice and business to conspire against the rights of labor in their trade or region. They include the violent antiunionists who politely call themselves "open shoppers," the promotional and community business groups who hope to attract industry by maintaining cheap and unorganized labor supplies, and just plain "rugged individualists" with antiquated concepts of industrial absolutism.

These organized conspiracies against labor's rights are not vague matters of conjecture. The subcommittee of the Senate Committee on Education and Labor has devoted a part of its effort to studying these so-called belligerent employer associations, and the results of those studies, based on sworn testimony and documentary records, have been submitted to the Senate. These reports treat the background and activities of certain employer organizations, including the National Metal Trades Association, the Associated Industries of Cleveland, the so-called Little Steel group, and the National Association of Manufacturers. There is available the published record of similar groups uncovered in the California hearings, which will be the subject of a report soon to be submitted.

These matters of public record show that it is a habit, indeed a function, of certain types of employer groups to build the necessary fires by propaganda and other devices that will pave the way for legislation restrictive of labor's rights, while these associations carry on organized assaults on those rights through labor espionage, company unions, black lists, strike-breaking systems, and various forms of coercion. This is no new phenomenon. These organizations functioned before the World War and were the subject of extended comment in the report of the Industrial Relations Commission published in 1915. These belligerent employers' associations led the fight against labor's rights after the World War, culminating in the great open-shop drive which so weakened organized labor during the 1920's.

These organizations mobilized the opposition to and defied the policy of section 7 (a) of the Natural Industrial Recovery Act; they fought the National Labor Relations Act both before and after its passage in the Congress and the courts. Since that act was passed and upheld by the United States Supreme Court, they have dedicated a large part of their effort to circumvention and avoidance of the law of the land. There can be no doubt that efforts will be made to foster, develop, and divert hysteria in this period of emergency against trade-unions and collective bargaining. On the wave of that hysteria will come increased activity to secure legislation restricting labor's rights, while they continue their own consistent drive to obstruct and destroy effective trade unionism.

Let us not suppose that the triumvirate of antiunion employers, antiunion legislators, and antiunion organs of "public opinion" have exhausted their resources in the recent blitzkreig waged against labor's rights because of strikes in defense industries. The machinery is well oiled and will continue to function at every opportunity. Public officials, legislators, trade-union members, and private citizens who believe in industrial democracy must be vigilant and courageous. Pure courage is not enough, nor is it sufficient to carry on an adequate legal defense of laborers and trade-union officials whose rights are unjustly violated. The fact must be faced that a large percentage of the general public does not understand this problem of strikes in defense industries. In fact, far too many are wholly uninformed of the functions and traditions of trade unionism. The fight for labor's rights cannot be waged exclusively in courts, union halls, or along the picket line. The larger forum for their expression is at the bar of public opinion.

There are some obvious fallacies in the current public analysis that strikes in defense industries are perverse, unnecessary, and disloyal activities than can be simply eliminated by passing a law. These fallacies, too, must be exposed. The real causes of strikes, whatever they are, must be revealed so that they may be understood. The false notion that strikes, which mean untold risks to the striker and his family in the loss of income and the potential loss of his job, are an enjoyable exercise without much reason except to obstruct production, is so silly that it should evaporate automatically. But, for some reason, that conception still lingers in certain quarters. The mistaken appraisal of all strikes as jurisdictional in character, involving simply struggles between two groups of union leaders to obtain control, is another bit of folklore which too many people do not recognize.

On the other hand, the fact that the primary cause of many of our most serious strikes in defense industries is the refusal of recalcitrant employers to bargain collectively receives very little emphasis. Even more surprising is the failure to emphasize the fact that many of the leading companies in whose plants strikes have occurred are guilty of a persistent course of illegal conduct which merits nothing but condemnation and must be uprooted by law, economic pressure, and public opinion as soon and as quickly as we would wipe out any other regular course of criminal and illegal activity.

I want to dispel, once and for all, a popular misconception, under the guise of which the foes of labor are seeking to destroy the hard-won rights of labor. I refer to the common

notion that defense strikes are seriously impairing our defense efforts.

Obviously, any work stoppage, whether on a mass scale in a strike or lock-out or individually because of illness or mechanical break-down, will affect total production.

Strikes in 1940 caused the loss of about six and one-half million man-days of work, according to the Bureau of Labor Statistics. For 14 years the Bureau has kept comparable statistics, and in only 2 of these years has the time loss been less. Compared with the last World War period, less than one-half as many workers were involved in strikes in 1940 than in any of the years 1916, 1917, or 1918.

These figures give an over-all picture for all industries. To satisfy skeptics who may think that defense industries are not typical of industry in general, I cite the further fact that in none of 11 industries which are most closely related to national defense—aircraft, shipbuilding, steel works, foundries and machine shops, aluminum, explosives, sawmills, machine tools, automobiles, electrical machinery, and engine manufacturing—in none of these 11 industries did the time-loss because of strikes exceed seven-tenths of 1 percent of total time worked; and in 8 of the 11 industries the time-loss was less than three-tenths of 1 percent.

Strikes during the last half of 1940, when the defense program was expanding most rapidly, involved 40 percent less man-days of idleness than in the last half of 1939. This is a remarkably good record of industrial peace, for, as everyone knows, strike activity is closely related to business activity.

Those who have tried to make labor the scapegoat in this production crisis had best look elsewhere if they really are serious about discovering the human bottlenecks in defense production. Their attention should be called to the time lost through injury and illness of workers, much of which could be prevented. More than six times as much time was lost because of illness last year than was lost due to strikes. More than four times as much time was lost because of industrial accidents. A manpower loss equivalent to that lost by strikes during the entire year of 1939 was lost every 14 hours of that year because of unemployment and part-time employment.

Pointing, in summary, to the May 1 report of the Department of Labor, that strikes in the United States have now declined to a point where only one-tenth of 1 percent of workers are affected, I heartily concur in a recent statement by Mr. Hillman, in which he said: "At the present moment the industrial-relations picture is far more favorable than any other time of equal industrial activity."

Many of the bills that have been introduced to regulate labor disputes and problems in defense industries are largely restrictive of labor's rights to strike or act in an organized way to secure collective bargaining, to protect their rights, to obtain union security, to maintain or secure a fair share in the proceeds of industry, to adjust income levels to rising prices, and to settle various and sundry grievances. The public must come to realize that the enactment of such legislation would not promote defense but only open labor in defense industries to abuses and exploitation. To assume that a certain group of employers would not take advantage of the situation and thereby profit at the expense of labor's rights, their competitors, and the general public weal would be highly unrealistic.

Efforts of this sort, however, should not be wholly defensive. The situation demands that collective-bargaining procedures and the protection of labor's rights through law and administrative action be aggressively and affirmatively promoted in defense industries. The damage to public morale and national unity that flows from the use of oppressive labor practices that violate labor's rights and interfere with its efforts to bargain collectively cannot well be endured in normal times. They should not be tolerated in a period of national emergency.

The governmental policies and machinery for mediation and arbitration should not become instruments for weakening the position of labor. Cooling-off periods, voluntary or mandatory, must not become heating-up periods. For employers to be allowed to take advantage of waiting periods to hire strike-breakers, lay in munitions of war, and prosecute various unfair labor practices that are calculated to destroy either the morale of the union or weaken its position is to encourage, not "cooling off" but an outbreak of the very struggle that mediation and arbitration is designed to prevent. Indeed, no waiting period, voluntary or mandatory, should be given unless during that time there are actual bona fide negotiations conducted between management and labor. There should be frank recognition that too prolonged waiting periods, voluntary or mandatory, where collective-bargaining rights and union recognition are at stake may be fatal to the position of the labor group involved.

Any attempt by statute to freeze or prescribe rigid procedures may defeat the very purpose of mediation, since it is the resourcefulness and adaptability of the trained mediator, plus the good will and informal cooperation of both parties, that spells success for mediation and conciliation.

Mediation and conciliation require great flexibility and leave much to the judgment and ingenuity of the mediator. The formula that works in one situation will not work in another. Mediation by precedent may handicap the mediator. The application of rules of law and evidence and formal procedure destroy the friendly aspect of a round-table mediation and convert the process into something akin to a legal contest. All experienced mediators and conciliators are familiar with these facts. All legislators are not. Hence it is important to leave the mediators and conciliators alone, free from legislative interference and procedure and the restrictions of substantive law. These positions of policy must be constantly urged and impressed upon the public and the legislative mind if we are to settle this problem of strikes in defense industries in a democratic way that will not sacrifice the rights either of labor or management or damage the national-defense effort.

I have every confidence that an implementation of wise public policy along these lines will strengthen labor's rights and promote the national-defense productive effort upon which we depend, in part, to save and sustain our total democracy.

Federal Highway Aid and Federal Taxes

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1941

Mr. BROOKS. Mr. Speaker, increased Federal taxation of gasoline cannot be justified on the basis of Federal highway aid appropriations. Actually, the Federal automotive excise taxes have contributed since they first were enacted more than the Federal Government has spent, not only on regular Federal highway aid, but also on emergency make-work projects since that time.

It should be remembered, however, that the Federal automotive taxes are not highway-user taxes but general emergency revenue measures designed to aid the Federal Government through a period of financial distress. Therefore there is no justification for the taxation of gasoline and other automotive products at disproportionate rates.

Even if no Federal automotive excise taxes were levied for the support of the Federal Government Congress would be obligated to continue Federal highway aid. The Federal Government is responsible for a proportional share of highway costs and it is in recognition of its duties in this respect that the appropriations for highways are made.

It likewise is the duty of the Federal Government to establish and maintain a highway system which is adequate for national defense. This responsibility was brought to the foreground only recently in the modifications which were made to the Federal Highway Act. But long before the present crisis the Army was in consultation with Federal highway officials to insure the development of the national road network to its present degree of adequacy. Defense highways are a responsibility of the citizenry in general and not of the automobile operators as a special group.

The Federal Government makes frequent and continued use of the highways in carrying the mails—a use which establishes its duty to pay toward the support of these facilities. In fact, the Constitution of the United States charges Congress with the responsibility for post roads.

In addition, it is the responsibility of the Federal Government to aid in the free flow of commerce between States, a function in which the development of highways is one of the important component activities. The Federal Government performs this duty in facilitating water transportation by charting rivers and coastal waters, by constructing breakwaters and lighthouses, by providing the Coast Guard for the protection of marine interests; yet no special tax is levied for the support of this activity. Similarly, in fostering air travel, the Federal Government has constructed beacons and landing fields without exacting from the beneficiaries a tax for these services.

It is in the discharge of this duty that Congress regularly appropriates funds for highways. In view of its program for the development of interstate commerce, it would not be in keeping with past performances for Congress to shift its responsibility for highway improvement to those who make direct use of these facilities.

The position of the Federal Government in regard to highway aid and automotive excise taxes ably has been summarized by Hon. WILBURN CARTWRIGHT, a leading authority on highway finance in Congress, chairman of the House Roads Committee, and the coauthor of the Federal Highway Act for the past several years. In an address before the 1940 convention of the American Road Builders Association, he declared that—

the participation of the Federal Government in the improvement of highways in cooperation with the States, using General Treasury

funds therefore, is amply justified on the grounds of general welfare, national defense, post roads, and interstate commerce. When the first Federal Aid Road Act was passed in 1916, neither the States nor the Federal Government had levied any special taxes, commonly known as road-user taxes, such as the taxes on gasoline, lubricating oils, and motor vehicles.

I think it is important that these broader reasons for justifying Federal participation in highway construction be not even tacitly abandoned by road advocates by putting too much emphasis on the relationship between road authorizations and road-user tax revenues. There might come a time in a few years when these taxes would not be levied, but that would not, in my opinion, remove the justification for further Federal participation in road improvements.

Automotive taxes originally were imposed by the States, and ever since that time this field of taxation has been recognized as rightfully belonging to the States. Many States have come to rely completely on these highway user tax revenues for the development of their road systems and the payment of interest and principal on their highway bonds. Excessive Federal taxation of these same subjects would impinge on this revenue source and thereby jeopardize the income expectancy and highway programs of the various State highway departments.

The dangers of the invasion of the State tax field by the Federal Government have been so apparent and real to the various States that when an increase in the Federal gasoline tax rate was considered in 1933 the legislature of six States adopted memorials requesting Congress to refrain from entering this State tax field, and personal protests were filed by the governors of no less than 11 States. Again, when the reenactment of the Federal gasoline tax was being considered in 1935, similar legislative memorials were adopted by another group of 11 States. In 1936 such memorials were filed by 2 States, in 1937 by 4 States, in 1938 by 1 State, and in 1939 by 2 States. It generally is agreed that only the extreme emergency of the national defense restrained the various States from filing violent protests against the Federal gasoline tax rate increase to 1½ cents a gallon enacted by the Revenue Act of 1940. During 1941, however, 1 State again memorialized Congress not to increase further the Federal gasoline tax and to discontinue the tax as soon as possible. It is believed that many other States which did not file formal protest feel today that excessive Federal taxation is as dangerous to their welfare as they believed it was before the present emergency.

The fact must be remembered that gasoline-tax revenues originally were intended for highway financing purposes, and highways are primarily the responsibility of the States. To quote one authority:

> This principle has become so firmly established that Federal or municipal taxation of gasoline definitely is viewed as an encroachment of the States' prerogatives.

It must not be forgotten that the gasoline tax has become the most important single tax in the tax systems of the States. No other tax provides as much revenue to the State treasuries.

Shall Strikes Continue To Prevent National Defense—Shall We Have a Cooling-off Period?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RADIO ADDRESS BY HON. CLARE E. HOFFMAN, OF MICHIGAN

Mr. HOFFMAN. Mr. Speaker, under permission granted, I insert herewith a 4-minute statement made by me on the American Forum of the Air program, over WOL, Washington, on May 11, 1941:

Shall we enact legislation compelling those who strike in defense industries to give notice of their intention and wait a specified period before striking?

This Nation needs every resource at its command. The maximum of production is essential to our national existence.

A strike means that certain employees cease work, either remain in the factory and prevent production, or accomplish the same purpose by the use of a massed or armed picket line.

The question tonight resolves itself into this: Shall the men who work in a given plant, which is engaged in the production of national-defense materials, be permitted to stop production without being required to wait a reasonable specified time?

As a nation we have taken the position that Congress has the power, and that it is necessary, to enact laws which take young men from their homes and their families, from their schools and their colleges, from their places of business to aid in national defense.

If young men can be drafted to train, fight, and work at whatever task may be assigned them, is there any reason why those who remain at home in comparative comfort should not be compelled to work for the defense of their country in industry or on the farm?

Is there any reason why those, who sometimes receive twice as much for 1 week's work as the conscripted man receives for a month's wages, should have the privilege, or claim the right, of refusing to serve their country by working in industry? Should they not at least be required to give notice of their intention to refuse to aid in national defense?

In this nation of ours, there is presumed to be equality of opportunity. There must be equality of service. There is neither logic nor justice in compelling the conscripted man to serve when and where and at whatever task his commanding officer may direct and, at the same time, permitting the man who has not been conscripted, who has not volunteered, to refuse to assist in providing the very things without which the task of the conscripted or enlisted man becomes impossible.

The soldier cannot fight without shoes, clothing, guns, ammunition, trucks, planes. To accept the proposition that the Nation has neither the power to, nor should, compel the man who remains at home to aid in furnishing those things to the soldier boy is not only the height of inconsistency, but of absurdity.

Why compel him to fight, unless we compel the man behind the lines to furnish the things which make it possible to fight successfully?

If once it be admitted that the unions, the Communists, industrialists, or any group of citizens, can stop defense production in even the slightest degree, then the Nation has surrendered its right of self-preservation.

Conceding the right to strike, is there any reason why the union man should be permitted to say to the nonunion man that he cannot take and hold a job?

How can the gentleman representing the A. F. of L. question the justice of saying to those men who would strike, who would prevent others from working, "Strike if you will, but at least let us have notice of your intention to strike, so that we may employ other men to make the engines for the airplanes, the guns for the boys, the trucks for the Army, the ships for the Navy, upon which your existence as freemen, our national existence, depends."

Why should we not say to men who would strike, "You are angry today. Let us have a cooling-off period."

That organized labor itself has already accepted this proposition is shown by the fact that in practically every collective-bargaining agreement there is an arbitration clause, which, in effect, means a cooling-off period.

William F. Green, president of the A. F. of L.; Mr. Meany, secretary-treasurer of that organization, have time and again sanctioned contracts which contained arbitration clauses, which, in principle, are no more, no less, than cooling-off periods.

The record, however, forces them to admit that strikes are called without resorting to arbitration and despite the protests of union officials and union contracts.

Is there any reason why a policy of which organized labor has approved, a policy conceded to be just and reasonable, should not be enacted into law? As well might we argue that, because 95 percent of our people are honest, there should be no law against stealing.

That which the A. F. of L. has practiced to a large extent, which you concede to be fair and just, we now ask be enacted into law, so that the impetuous, the hot-headed, the lawless, may be made to conform to a policy which is necessary for the ultimate good and safety of the Nation.

Ernest Lundeen

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RADIO ADDRESS BY MRS. ERNEST LUNDEEN

Mr. KNUTSON. Mr. Speaker, under the permission granted me to extend my remarks in the RECORD, I desire to insert the address delivered by Mrs. Ernest Lundeen, widow of my good friend and former colleague, the late Senator Ernest Lundeen. Senator Lundeen was a veteran of the Spanish-American War. On April 6, 1917, he was one of a small band who voted against America's entrance into the World War. It is regrettable that his patriotism should be questioned and impugned after he had left this sphere of activity and could no longer defend himself. Mrs. Lundeen's lines are not in defense; indeed, Ernest Lundeen needs no defense. In her radio address of last

evening, Mrs. Lundeen makes the people of America acquainted with the man who was my friend and colleague. It is a dispassionate and authentic review of the life of a great American patriot.

The address follows:

Ladies and gentlemen, I come to you on a mission which is unprecedented in radio broadcasting.

I am the widow of Ernest Lundeen—United States Senator from Minnesota—who was killed in an airplane crash on August 31, 1940.

Walter Winchell, who broadcasts over this network, has cruelly slandered my husband—after his death—by repeatedly suggesting that Senator Lundeen was not a loyal American.

This statement is malicious and atrociously false.

That is why I am speaking to you—not to defend my husband's record. Ernest Lundeen's record needs no defense. His record stands in Congress—and it is an imperishable record of true Americanism. Our 19-year-old son and 17-year-old daughter and myself are proud of that record. I do want to tell the people of America of this infamous thing—the libeling of a gallant gentleman who would gladly have died to make America safe—and who, if he were alive, would reply to all base insinuations with a clarity and vigor I fear I cannot achieve.

Much as I loved my husband, I shall not attempt to exaggerate his virtues or to ignore his faults. He was a robust, hard-hitting American, intensely alive to everything that affected his country and its people.

Perhaps the truest picture of him that could be presented is contained in a pencilled memorandum which I found among his papers after he had passed away.

Seated alone in his office at midnight of the day he had taken his solemn oath as a Member of the United States Senate, this is what he wrote on a sheet of paper which I have before me. I quote: "Midnight, January 3, 1937. May I be a Senator after Washington, Jackson, and Lincoln, and under God, always for our America."

That was his creed in a sentence. It wasn't written for publication, but it reveals the soul of the man who placed his country second only to his God. I want to repeat that sentence: "May I be a Senator after Washington, Jackson, and Lincoln, and under God, always for our America."

This is the man who, after the grave had closed on him and he could no longer defend his good name, has been ruthlessly slandered. The dead cannot be hurt by vilification; it is those who loved the dead and who all the years of their lives will bear his name with pride, they are the ones who feel the force of the dagger driven into the back of the dead.

Ernest Lundeen was born in South Dakota, the son of Rev. Charles Henry Lundeen, a humble minister of the gospel. My husband worked his way through school and college, graduating from Carlton College and the University of Minnesota. My husband was not a pacifist. Even before he was old enough to vote he had volunteered and served in the Spanish-American War. For 10 years he was a member of the Minnesota National Guard. He was noted for his efficiency in military tactics, and he achieved distinction as one of the most accurate marksmen in our country.

Ernest Lundeen served in the Minnesota State Legislature and in 1916 was elected to the World War Congress. He firmly believed that we should not become involved in any European war. He had been elected upon a vigorously reiterated campaign pledge that he would never vote to put this country into a foreign war. He kept that sacred pledge. He was one of that little band of 57 Members of Congress, who on April 6, 1917, were far-seeing and fearless enough to vote against a declaration of war.

In a memorable speech 24 years ago he predicted that thousands of our boys would die on foreign battlefields in a war that would destroy democracy. He foresaw that our involvement in that war would bring suffering and want to the people of America. How tragically true was his vision.

For saying these things my husband was denounced as pro-German. Then, as now, there were those whose emotions blinded their judgment. But Ernest Lundeen did not falter; he voted against conscripting American youth for service on foreign battlefields.

He was confident time would vindicate his course, and vindication did come—complete and glorious vindication. One touching tribute to his patriotism deserves mention here. On Memorial Day 1919 he delivered the oration at the National Cemetery, Arlington, Va., upon the invitation of the National Grand Army of the Republic, the highest honor that any citizen can receive on that occasion.

In 1932 and 1934 my husband was again elected to Congress.

In 1936 he was further honored when he was elected to the United States Senate. Already there were dark rumblings of another war in Europe. My husband reiterated his life-long opposition against our involvement in European conflicts. His opponent attacked his stand. With that clear-cut issue before them—the people of Minnesota elected Ernest Lundeen with an overwhelming majority of 262,000 over a man who had been three times Governor of our State.

After election my husband did not treat his pledges as campaign oratory. He urged absolute neutrality in the affairs of Europe. He was the first man in public life to demand that the United States secure possession of the West Indies and Greenland as essential for our own national defense. As long ago as 1919 he advocated a unified air force under a Cabinet head. Do not today's headlines again prove that my husband had vision and foresight?

From his first World War speech April 6, 1917, to the last speech he delivered in the Senate four days before his death—a 3-hour extemporaneous talk against our involvement in foreign alliances—his stand had been unswerving and constant.

Vicious innuendoes have been made by Winchell. Slanderers of my husband's memory have suggested that others wrote his speeches. This is a deliberate falsehood, designed to mislead. No one wrote my husband's speeches. He was fully capable of writing his own—and he wrote his own.

Winchell has referred to an address my husband delivered in New York on March 20, 1940. Winchell said this affair was arranged in honor of "A visiting German agent." This gentleman was the Duke Saxe-Coburg-Gotha of Germany—a grandson of Queen Victoria, a cousin of the present King of England, and vice president of the International Red Cross. Norman Davis, the chief of the American Red Cross—entertained this German visitor in Washington and prominent public figures, including officials of the State Department, were guests. Of course, Winchell didn't mention these facts when he described the Duke as a "German agent." And, of course, Winchell didn't explain that President Roosevelt also entertained this "German agent."

Even then my husband would not have accepted the invitation to speak at this dinner in New York until he was given assurance that the Duke was not here to collect money for Germany—but here only to promote Red Cross work and increase international trade.

It is customary when distinguished officials of foreign nations are guests in our country that the flag of their country be placed subordinate to our flag. When the King and Queen of England were here, Washington was aflutter with British flags.

At this New York dinner our American flag was directly behind the speakers' table. To show you the misrepresentation resorted to by my husband's enemies, I point out that a number of photographs of my husband were taken while he was speaking. One of those photographs was taken at such an angle as to convey the impression that my husband was standing beneath the swastika. As a matter of fact, he was standing under the Stars and Stripes. I have beside me four photographs proving the truth of my statement. It has been said by a pair of Washington columnists that my husband received a handsome sum for the speech. That is another deliberate falsehood, and those who wrote it know it.

My husband never expressed support—publicly or privately—for any foreign government. The one thought that filled his mind was the safety and well-being of America. His was not a divided allegiance. He sympathized with other countries and with other peoples, but he kept a rein on his sympathies because of his firm conviction that Americans should think of America first.

Doesn't it seem strange to you that these men who toss falsehoods about so lightly now that my husband is dead—never dared to speak or write a word against him while he was alive?

This sudden bravado against which a widow and her children have no redress comes from the fact that the law holds that a dead man cannot be libeled. These villifiers of my husband's memory waited until his voice was silenced and only the bereaved members of his family were left to listen and languish in his sorrow.

It is not necessary for me to tell you of our suffering. Try to imagine our position. Only a few days after the husband and father we loved had been laid away—this storm of malice broke.

My husband's colleagues in Congress expressed their indignation. Pearson and Allen—a pair of columnists who cooperated with Winchell in spreading these libels—had written that two Department of Justice agents were on the plane with my husband when it crashed—that they had been assigned to "watch him." All accusations of this nature are emphatically denied in the letters of Attorney General Jackson and J. Edgar Hoover, whose letters are carried in full in the October 9 and 15, 1940, CONGRESSIONAL RECORDS. Please allow me to read a portion of the Attorney General's letter. I quote:

"I wish to deny emphatically recently published press reports to the effect that the late Senator Ernest Lundeen, of Minneapolis—at the time of his death in an airplane accident on August 31—was under investigation by the Department of Justice. No inquiry into the affairs of Senator Lundeen has ever been instituted or contemplated—either by the Federal Bureau of Investigation or by any other agency of the Department of Justice—and any statement or report to the contrary is untrue."

But these assurances by the Attorney General of the United States and the Chief of his Bureau of Investigation had no effect on those intent on smearing my husband's memory. They continued to spread the libels—safe in the knowledge that legal steps could not be taken against them.

I know this presentation has been inadequate. I have done my best in these few minutes to explain this vile slander on my husband's memory. Why has the good name and patriotism of my husband been so slandered? There is only one explanation. If my husband had joined forces with the international warmongers, he would now be permitted to rest in peace. This campaign of vilification against the dead is just a part of brutal attacks on distinguished patriots who are living—all to serve as an object lesson that no one must dare to stem the tide of bloody war. No court of law will punish them; but they cannot escape just retribution.

Through the generosity of the National Broadcasting Co. I have placed my words in honor of my dead husband's life and record into the hearts and minds of the just and fair people of America. His record needs no defense. He was a soldier in his country's cause. He knew but one patriotism, and that was for America. He knew but one love, and that was for his family, his children. I, the mother of those children, wife of Ernest Lundeen, have spoken so that vilification shall not reach into the innocent grave nor besmirch the innocent ones who lovingly bear the name of Ernest Lundeen.

We Burned Our Fingers Once—Will History Repeat?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

Mr. HOFFMAN. Mr. Speaker, we saved Britain before and were called Uncle Shylock. Every nation which has followed her into this war has gone down to defeat. Are we to sacrifice more than a million lives, untold treasure, just to be used as a cat's-paw?

During this new period of hysteria we Americans will do well to see ourselves as the wise men of Europe see us—after we succumb to their interventionist propaganda.

As the New York Enquirer reminds us:

It will be an empty recompense for those Americans who, should the Nation enter the war, are unfortunate enough to survive the collapse of the Republic, to be told from beyond the Atlantic that Uncle Sam was befooled into reaching for his gun, as he was away back in 1917. A famed British writer, Hilaire Belloc, with that honesty characteristic of his type of Briton, made this frank disclosure in 1925, as to how America was gulled in World War days:

"The most comic part of the affair was the attitude toward America. We dared not insult America, for we were naturally as keen on getting American help as is a drowning man on catching a deck chair. In their ignorance, many people came to believe that it was the duty of the Americans to come over and help, and what was more astonishing still, it was represented to them as a matter of life and death, not to us but to themselves. The Americans were told—heaven knows whether any of them believed it—that if the Germans, Austrians, Bulgarians, Turks, and others won in their push against the English, French, and Italians, that after the half-baked won against the baked, the next thing would be a sailing of the conquerors over the sea for the rude domination of Scranton, Pa. Fiddlesticks! But people would really talk like that. They shock their fingers at the United States and said, 'It will be your turn next.'"

The American people must decide—and there is not a moment to lose—whether the forces that are dragging us to war and perdition, as we were dragged 24 years ago, should consummate their crime against God and America, or whether our country shall remain at peace and attend strictly to its own affairs.

We are still paying the cost of fighting Britain's last war. Out of it we got nothing but suffering, economic loss and abuse from those we aided. For once in our history, let us think of America first.

Southern Baptist Convention

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ADDRESS BY HON. JOSEPH R. BRYSON, OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under unanimous consent to extend my remarks, I include an address delivered by me before the Southern Baptist Convention in Birmingham, Ala., on Saturday, May 17, 1941, as follows:

America today—more than any other nation, at any other time in the history of modern civilization—is the final and best hope for the preservation of Christianity and freedom.

Though the last to surrender was not least in valor, those once free and independent nations of Europe no longer exist as such. They have fallen one by one until at last Great Britain, alone, stands to resist the invader's march. And it was to England—that isle of our mother tongue—an American poet once wrote these lines:

* * * if your courage wane
Through force or fraud, look westward to your child.

Today, not only England but all the ravaged nations of Europe are looking westward. They are looking to America, perhaps, as the world's last best hope for the preservation of Christianity and freedom.

WE MUST NOT FAIL

Humanity is suffering. With calmness and resolution let us say to ourselves: "We cannot; we must not; we shall not fail." The sin of failing was cited by our great Secretary of State when he asserted: "Were we to fail in meeting our responsibility, we would fail ourselves; we would fail the generations that went before us; we would fail the generations that are to come after us; we would fail mankind; we would fail God."

America, therefore, must be strong for we must not fail. We must build a tower of strength and a force of military might. Our power to preserve Christian civilization and the democratic way of life must surpass the power of the enemy to destroy them. Thus, we are moving in the determination to make America, by all odds, the strongest and most powerful nation on the face of the earth.

If we need an all-out defense effort to make America strong, then we need all-out realism, all-out sincerity to make that effort 100 percent effective. All-out realism or sincerity is simple. It means this, and just this, to every American citizen: support to the utmost whatever serves to increase our national strength and unity; oppose to the utmost whatever serves to destroy our national strength and unity. My purpose in coming before you this morning is to oppose to the utmost the liquor traffic which serves to destroy national strength and unity.

STRENGTH AND SECURITY OF AMERICA

It is reassuring to observe that the Nation as a whole is already supporting to the utmost all efforts for the increased production of planes, tanks, ships, guns, and other needed weapons of defense, but what is most disturbing is the fact that as yet the Nation has voiced little opposition to the ever-expanding menace of the liquor traffic, which through the medium of alcohol is undermining the physical, moral, and spiritual foundations on which rest the final strength and security of America. This is a serious matter. We have carried forward our production of the weapons of defense at top speed, but all too long we have neglected the conservation and strengthening of our manpower that is to defend this Nation if needs be.

The time has come, and it is later than you think, for the American people to firmly assert their opposition to the liquor traffic. These truths are held to be self evident:

First. Alcohol wastes national wealth needed for national defense.

Second. Alcohol saps the strength of manpower essential to national defense.

Third. Alcohol undermines the spiritual and moral forces which must sustain the efforts of men and women when the hour of greatest national crisis comes.

Alcohol wastes national wealth. Since repeal in 1933 we have spent $20,000,000,000 in the United States for liquors, not including illicit liquor. Today we are spending more than three and one-half billions annually for liquor, and for many months following the outbreak of the European war our importation of Scotch whisky from England was so heavy that it enabled Great Britain to maintain a favorable balance of trade with the United States despite her enormous purchases of planes, tanks, and other war materials from American manufacturers.

ALCOHOL DESTROYS MANPOWER

The total amount of our national income which is absorbed by alcohol annually is not fully represented in these figures since they only account for the outright sale of alcoholic beverages. The indirect costs of the liquor business run into still more billions of American dollars, as witness the size of our crime bill, which has reached a high of fifteen billion a year. It is conservatively estimated that arrests for intoxication cost the country at least $6,000,000,000, while another fifteen billion goes for the treatment and care of persons in mental hospitals due to alcoholism. At a time when billions are needed for defense expenditures how can we afford to dissipate so sizable a portion of our national income on alcohol?

Alcohol not only wastes national wealth, needed for national defense, it saps the strength of our manpower essential to national defense. During the last World War it was our own Gen. John J. Pershing who described alcohol as America's deadly enemy when he declared: "Banish the entire liquor industry from the United States; close every saloon and brewery; suppress drinking by severe punishment to the drinker * * * and the Nation will suddenly find itself amazed at its efficiency and startled at the increase in its labor supply. I shall not go slow on prohibition, for I know what is the greatest foe to my men, greater even than the bullets of the enemy." British Prime Minister David Lloyd George likewise said:

"We are fighting Germany, Austria, and Drink, and so far as I can see the greatest of these deadly foes is Drink."

Modern warfare is mechanized warfare; modern defense is mechanized defense in which men with clear brains and steady hands must exercise split-second judgment for precision in the operation of planes, tanks, and other motorized units of a modern defense system. This thing which confronts us is

not a theory, it is a practical problem; we simply must preserve the physical, fighting strength of this Nation for common defense against any eventuality. "To put alcohol in the human system," said the great inventor, Thomas A. Edison, "is like putting sand in the bearing of an engine." The fact that alcohol destroys essential teamwork between head and hand is reflected in the ever-increasing number of automobile accidents since repeal. In 60 percent of the fatal motor accidents for the year 1939 investigation proved that drivers had been drinking within an hour preceding the accident.

ARMY CAMPS UNDER PRESSURE LIQUOR TRAFFIC

If there are those who are inclined to view this particular problem without any expression of concern, I ask them, Can comfort be found in the fact that approximately 50 percent of the young men examined for Regular Service in the United States Army are being rejected because of failure to meet minimum standards of physical well-being? This is indeed an alarming revelation; but still more alarming are current statements from War Department officials exposing the pressure of the liquor traffic on the young men now undergoing training in Army camps throughout the country. Army Chief of Staff Gen. George C. Marshall recently deplored the fact that "establishments for the purpose of selling liquor are becoming increasingly active in the communities adjacent to camps." Said General Marshall: "Here we have on the one side a sordid business for the accumulation of money, and on the other the interest of every parent in the United States who has a son in the Army."

Now awaiting the action of the Senate Military Affairs Committee of Congress is a legislative proposal described as "a bill to provide for the common defense in relation to the sale of alcoholic liquors to the members of the land and naval forces of the United States and to provide for the suppression of vice in the vicinity of military camps and naval establishments." The author of this measure was the late Senator Morris Sheppard of Texas, that great leader of men who stood in the vanguard of the temperance movement for a half century. Though death has stilled his voice the example set by Senator Sheppard will live on after him as a beacon of light and inspiration to guide and direct those who are joined in the great cause for which he labored so long and so well. I am actively supporting this and similar measures designed to bolster our defense effort against the menace of the liquor traffic, and it is my determination to work for their enactment at the present session of Congress.

At the outbreak of the war, France was believed to possess the best-trained army in all the world. Not so comforting, however, was the fact that her per capita consumption of alcoholic beverages during the 20 years between World War I and World War II exceeded that of every other European nation. Germany on the other hand established higher standards of sobriety and discipline than ever attempted by the French or any European nation for that matter. A number of factors may have accounted for the incredible fall of France last spring but the factor of alcohol appears to have weighed heavily. The part that alcohol played in the fall of France was stated in a news dispatch from Vichy on August 24 last, reading as follows: "A government spokesman said today that alcohol was one of the chief causes of the moral collapse of France under attack."

Yesterday France came to grips with a Germany so intent on success and victory that she established higher standards of sobriety and discipline than ever attempted by the French people. Today, Germany being more intent than ever on success and victory has pushed to even higher levels those standards of discipline and sobriety. The question is: Will tomorrow find America softened by alcohol for the same sort of moral collapse which spelled disaster for France or will we be found hardened for any possible test of strength?

ALCOHOL UNDERMINES SPIRITUAL AND MORAL FORCES

In our drive for increased national defense, we must not forget that alcohol undermines the spiritual and moral forces which strengthen individual character and national unity. On the occasion of his last inaugural address President Roosevelt pointed out that a nation, like a person, has a body, mind, and spirit and, like a person, to be strong must possess a full measure of physical, mental, and spiritual vitality.

President Grover Cleveland once said: "I am firm in my conviction that * * * there is no calamity which a great nation can invite which equals that which follows from supine submission to wrong." An outstanding newspaper editor recently stated: "There is only one certain way to avoid disaster and that is through a recovery of respect for and touch with matters spiritual."

No true, thoughtful American would scoff at those words of warning. The pity of it all, however, is that our national attitude toward alcohol and the liquor traffic has been conditioned to such a high degree of indifference that millions of Americans are no longer sensitive to the injurious qualities of alcoholic beverages, nor are they fully aware of the burden which it imposes on our national strength. We have too long been subjected to a hideous brand of propaganda which seeks to make what is a lie the truth, and what is the truth a lie. We find the climate of public thinking still beclouded by the misty arguments and flimsy pretenses of those alcoholic missionaries who were once bold to preach the gospel that to legalize the manufacture and sale of alcoholic beverages would be no mistake and could do no harm.

We observe that interests of the liquor traffic have spared no effort in their attempt to drape the white linen of virtue over the naked evil of drinking. For instance, the word "saloon," the American people made it too harsh for social respectability, so exponents of the liquor traffic now describe drinking places as cocktail lounges. But is there anything which makes a cocktail lounge essentially different from a saloon except for the absence of a brass rail and the presence of women? As a member of the clergy recently pointed out, "the saloon has returned. It is here in forms a thousandfold more vicious and debauching than anything ever known in the palmiest days of the preprohibition era. The beer garden, the cocktail lounge, the night club, the dance hall, and a host of other forms of bedevilment have been thrust upon us."

National advertising on an unparalleled scale has been employed to weaken all lines of resistance to alcohol. What do we see in our newspapers and magazines—attractive, carefully worded, skillfully designed advertisements which begin with the brazen assumption that drinking is no evil and end with deceptive claims as to the values of alcoholic beverages. Thousands of dollars are spent daily to perpetrate the lie that beer is real food while hardly a penny is given to publicize the truth that milk is nutritious. And what do we see in our movies—leading players as heaviest drinkers. This is not the sort of stuff of which a strong, healthy, and virile nation is to be made.

In a book entitled "You Can Defend America," I recently read this:

"The fight is on. The fight against our softness, graft, laziness, extravagance, buck-passing, materialism—allies of the 'fifth column.' The battle line runs through every home, every office, every factory, every farm.

"It is a daily battle. It takes courage. Imagination. You've got to be tough inside. You've got to think hard, and live clean."

CHURCH MUST GO FORWARD

Let us here and now declare that for us "the fight is on"; that the church will take the lead in that fight; that we will fight on until victory is complete. In a great democracy such as ours, it is the force of public opinion and not the edict or order of any one man which determines our course of action, national policy, will and purpose. If the full force of public opinion is to be marshaled against the evils of alcohol and the liquor traffic, the church must go forward with courage and determination.

If we be conscientious, it is for us to realize that the fate of a nation will ultimately depend upon the strength and health of her population. If we be sincere, it is for us to realize that a nation, like a person, may drift with the tides of indulgence that end in oblivion or sail on the winds of self-discipline which lead to greatness. If we be true to the traditions of our forefathers, we must, in this fateful year of 1941, set our sails to the purpose of gaining such increased strength as may be essential for the fulfillment of America's destiny among the nations of the world.

This is a high purpose, part of a noble plan in which our hearts, our minds, our spirits must join. So to close, I make this poetic prayer:

We know the paths wherein our feet should press,
Across our hearts are written Thy decrees,
Yet now, O Lord, be merciful to bless
With more than these.

Grant us the will to fashion as we feel,
Grant us the strength to labor as we know,
Grant us the purpose, ribbed and edged with steel,
To strike the blow.

Knowledge we ask not—knowledge Thou hast lent;
But Lord, the will—there lies our bitter need—
Give us to build above the deep intent
The deed, the deed.

Americanism Redefined

EXTENSION OF REMARKS
OF
HON. WILL M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE BY MRS. WILL M. WHITTINGTON, PREPARED FOR THE WEDNESDAY, MAY 14, 1941, MEETING OF THE CHAKCHIUMA CHAPTER, GREENWOOD, MISS., DAUGHTERS OF THE AMERICAN REVOLUTION

Mr. WHITTINGTON. Mr. Speaker, under leave granted I extend my remarks by including the following article by Mrs. Whittington, who had been asked to speak on the subject Americanism Redefined at the meeting held on Wednesday, May 14, 1941, of the Chakchiuma Chapter, Greenwood, Miss., Daughters of the American Revolution, to wit:

Webster's New International Dictionary defines Americanism as: "attachment or loyalty to the United States, its traditions, interests, or ideals." It is significant, I think, that in this sense, the meaning is unique. There are no such words as Frenchism, or Germanism, or Britishism to convey an analogous idea with reference to those countries. In fact,

in the early writings of the founders of the Nation there occurs no such expression, for so revolutionary were the ideas and aims which inspired the founding fathers that a new word came into the language to express their devotion to country, love of personal liberty, insistence upon national independence, approval of our institutions, patriotism, and the duty of defense.

Now the very wording of my subject, Americanism Redefined, suggests that by perhaps imperceptible degrees we have been traveling away from the original implications of the term and that we have arrived at a point where a new definition is necessary. The almost unbelievable events of the past year and a half have jolted us out of our comfortable complacency. In this crisis, when many of the institutions we thought unshakable are tottering before our helpless gaze, it is indeed time to take stock, individually and as a Nation. What does Americanism mean today? Has all that it signified, all that it implied in the early days of the Republic changed?

If we agree that Americanism is essentially loyalty to the American ideal, a redefinition is necessary only if the ideal has changed or if our allegiance has wavered.

The heart of the American ideal is the recognition of the value of the individual and the development of that individual for his own and the common good through liberty and social justice. The fundamental principle of our Republic is the concept that man is capable of governing himself. Surely not one of us has lost his faith in these bedrock foundations of our civilization, yet these are the bulwarks that are being assailed by the enemy. Today the war that threatens to envelop us is not merely a war of material weapons—guns and tanks and ships and airplanes. These are only the outward manifestations of a fiercer battle, the war of conflicting ideologies. The fight is that of the individual versus the superman, liberty versus tyranny, democracy versus totalitarianism.

It is one of the paradoxes of democracy that its fundamental principles may offer a vulnerable spot in its armor. Our most cherished traditions, freedom of speech and of the press, the right of assembly, have been used by enemies of democracy for spreading the most insidious propaganda against our way of life. They tell us that democracy has failed, that in the new order there can be no personal liberty, that progress comes, not in differentiation, but in uniformity.

As American citizens, we must fight unceasingly and implacably, against such subversive propaganda. Listen to the words of Thomas Jefferson, which might have been written for us in 1941: "Every society has a right to fix the fundamental principles of its association, and to say to all individuals that if they contemplate pursuits beyond the limit of those principles and involving dangers which the society wishes to avoid, they must go somewhere else for their exercise; that we want no citizens, and still less ephemeral and pseudo-citizens on such terms. We may exclude them from our territory, as we do persons with disease." This is sound advice for dealing with those for whom the blitzkrieg has become the symbol of results to be accomplished by dictatorship methods, efficiency a fetish, and achievement a god. Let them go where they can live under such a regime. We must and shall preserve the democratic method which is willing to a certain extent to forego efficiency in order to acquire moral dignity.

The development of the individual implies the inherent right to enjoy the fruit of his labors. For this our forefathers labored. In other words they believed in work as a means to accomplish the desired end. Do we, as a Nation, now subscribe wholeheartedly to this tradition? Or is "something for nothing" the watchword, the most possible gain with the least possible effort? Apparently many would like to revise the time-honored words "the right to life, liberty, and the pursuit of happiness" to "the right to a living, liberty, and the pursuit of happiness."

I have recently seen a new play, Hope for a Harvest, the lesson of which could well be taken to heart by the public at large. It preaches the old-fashioned doctrine of work, and that along with our rights, which have been overemphasized, there are duties and responsibilities which we owe to society and our Government. The development of the individual for his own good is only half the picture—it is also for the common good, even at the price of self-sacrifice.

That the citizens should feel a responsibility for their Government is one of the distinguishing characteristics of a democracy. Now, as never before, it behooves us as patriotic citizens to support and look to the welfare of our country; not only must we contribute of our means, but of our interest, our thoughts, and our prayers. We may have become lax during the years of security, taking for granted the blessings that have accrued to us because we live in a democracy, and heedless of the dangers that were encroaching upon us unawares, yet in our hearts we have not departed from the teachings and precepts of our fathers.

So, let us say, it is not a redefinition of Americanism that is needed, but a rededication of ourselves as American citizens, a reaffirmation of our belief in democracy as a way of life. Truth stands, and true Americanism is as real and as potent as in days gone by.

But passive adherence to the democratic principle as a political form of government is not enough. We must show our faith in the kind of world that democracy makes possible, a positive, militant faith that will fight for the preservation of our traditions and institutions. The spirit is our weapon in the war we are fighting. Physical might has never been able to overcome spiritual force. Democracy can be preserved if we have the will and the spirit to do it.

When our forefathers entered upon their noble experiment of founding a democratic Nation, the eyes of suffering humanity were upon them, and they did not fail them. Today, the oppressed of the world look to us for the preservation of the democratic ideal. They shall not look in vain.

T. V. A.

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

NEWS RELEASE FOR MAY 18, 1941

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement relative to the T. V. A.:

The Tennessee Valley Authority observes its eighth anniversary today, May 18, in the midst of the largest and most urgent work program in its history.

In addition to its huge normal program of construction and operations, T. V. A. with its 20,000 employees is carrying out national-defense assignments to increase its power capacity, produce ammonium nitrate for use in munitions, speed up completion of the 9-foot navigation channel, enlarge capacity for production of concentrated phosphate fertilizer, and build houses for industrial defense workers.

At the direction of Congress, the Authority is adding 360,000 kilowatts to its installed power capacity, principally by the construction of Cherokee Dam and the Watts Bar Steam Plant, to supply energy needed to produce more aluminum for airplanes. On authorization by the United States War Department, the Authority is adding a new ammonia plant and reconstructing Nitrate Plant No. 2, at Muscle Shoals, Ala., to produce ammonium nitrate at the rate of 300 tons a day. As agent of the Federal Works Administrator, T. V. A. is building 250 dwellings in the Muscle Shoals area and 100 in the Humboldt-Milan area in Tennessee to house industrial workers engaged in national-defense production. At the same time the Authority is moving ahead with its normal program, including the construction of Kentucky, Watts Bar, and Fort Loudoun Dams.

Eight years ago, navigation on the Tennessee River was largely restricted to local hauls of a hundred miles or so during the autumn and winter when heavy rains filled the channel to navigable depths. Today, an all-time record freight traffic of 97,000,000 ton-miles (1940) has been reached and gasoline, grain, and automobiles are among the important new kinds of freight moving over the river from points of origin outside the Valley.

Eight years ago floods in the Tennessee River were virtually altogether uncontrolled. Today T. V. A.'s system of eight major dams is providing 4,000,000 acre-feet of controlled storage, and completion of the dams now under construction will increase controlled storage to 10,000,000 acre-feet.

Eight years ago the Federal Government was utilizing the vast water power of the Tennessee River for the production of electricity at only one dam—Wilson. Lacking transmission lines with which to carry its power to market the Government had only one customer, the Commonwealth & Southern Corporation, and was selling only 21 percent of the electric power Wilson Dam could produce.

Today the Government's Tennessee Valley power plants are producing more than five times the amount of power that could have been produced by Wilson Dam in 1933. The Tennessee Valley Authority, with 4,900 circuit miles of its own transmission lines, possesses a ready market for all the power it can sell. Seventy-five municipal systems and 38 cooperatives are buying T. V. A. power wholesale and distributing it to more than 430,000 customers, who are saving more than $9,000,000 a year in electric bills as a result of T. V. A.'s low rates.

Eight years ago the Government's nitrate plant at Muscle Shoals had been idle for years. Since T. V. A. began operation a portion of the plant has been converted to production of phosphates and more than 290,000 tons produced, much of which has gone into demonstrations of good-farming practices on more than 35,000 farms in 27 States.

In its 8 years T. V. A., in cooperation with State and local agencies, has also developed farm and industrial equipment to help raise agricultural income and widen the uses of electricity, helped communities to plan their orderly development, cooperated in the checking of erosion on thousands of acres of land. The Authority responded to requests from communities for technical assistance in planning for local flood-control works and river-freight and passenger terminals, cooperated in public-health work, carried on research to develop new uses and wider markets for mineral resources, conserved the recreational values of its lakes by building demonstration parks, and cooperating in the construction of parks by States counties, and municipalities.

Milestones in T. V. A.'s 8-year record have included—

1933: Construction of Wheeler Dam started. President orders construction of Norris Dam; construction started. Tupelo, Miss., first municipality to contract for T. V. A. power. T V. A. agricultural-industrial research program started. An organization of almost 10,000 men and women recruited in less than a year's time.

1934: T. V. A. buys blocks of transmission and distribution properties from Mississippi Power Co. for $850,000 and from Tennessee Electric Power Co. for $8,605. Newly formed Alcorn County (Miss.), Electric Power Association begins using T. V. A. power. Knoxville, Dayton, and Pulaski, Tenn.; Athens, Decatur, Florence, Russellville, Sheffield, and Tuscumbia, Ala.; Amory and New Albany, Miss., contract for T. V. A. power. First electric furnace put into phosphate production by T. V. A. at nitrate plant No. 2 at Muscle Shoals, Ala. Product is 45 percent concentrated phosphate fertilizer. Single electric furnace has capacity of 16,000 tons a year. Authority signs first of 23 contracts for administration of phosphate demonstration program by land-grant colleges. Electric Home and Farm Authority incorporated in Delaware as T. V. A. subsidiary, "with the purpose of making feasible the increase in the use of electricity in homes and on farms, by seeking to improve the quality, decrease the cost, and finance the consumer purchase of electrical appliances." Fourteen preferred-stock holders of the Alabama Power Co. file suit (the Ashwander case) in the Eighth Judicial Circuit of Alabama to enjoin the sale of certain transmission lines, substations, and auxiliary properties by the company to T. V. A.

1935: Congress amends Tennessee Valley Authority Act to clarify the principles of allocating costs and keeping accounts, and to enable the Authority, for a period of 5 years, to issue bonds and lend a maximum of $50,000,000 to local governments for use in buying, constructing, or operating power transmission and distribution lines. T. V. A. buys block of transmission lines and associated facilities from Tennessee Electric Power Co. for $15,753. Second electric furnace installed at Shoals phosphate plant, increasing installed capacity to 50,000 tons a year. Somerville, Bolivar, Dickson, Jackson, Memphis, Milan, and Volunteer Electric Power Association (Decatur) Tenn., Muscle Shoals City, Ala., and Holly Springs, Okolona, Monroe County Electric Power Association (Amory), Pontotoc Electric Power Association (Iuka), and Tombigbee Electric Power Association (Tupelo), Miss., contract for T. V. A. power. First test-demonstration farm selected for utilization of T. V. A. phosphate fertilizer in rounded farming program. Construction of Pickwick and Guntersville Dams started.

1936: United States Supreme Court decides for T. V. A. in Ashwander Case. Aluminum Co. of America contracts for T. V. A. power for its plant at Alcoa, Tenn. T. V A buys certain properties of Alabama Power Co. for $1,080,974. Cullman Electric Cooperative (Cullman), Ala.; North Georgia Electric Membership Corporation (Dalton), Ga.; and Duck River Electric Membership Corporation (Shelbyville), Gibson County Electric Membership Corporation (Trenton), Middle Tennessee Electric Membership Corporation (Murfreesboro), Pickwick Electric Membership Corporation (Selmer), and Southwest Tennessee Electric Membership Corporation (Brownsville), Tenn., contract for T. V. A. power. Number of test-demonstration farms reaches 10,000 in 10 States. Norris and Wheeler Dams completed. Construction of Chickamauga and Hiwassee Dams started.

1937: First substantial operation of the T. V. A. reservoir system for flood control. Crests at Chattanooga reduced by 3 to 5 feet on four occasions; savings estimated at $750,000. Ohio River crest at Cairo, Ill., reduced by nearly half a foot, preventing flood from overtopping levees. Electro-Metallurgical Co. contracts for T. V. A. power for a plant to be located near Sheffield, Ala. Victor Chemical Co. chooses site near Mt. Pleasant, Tenn., for plant to make phosphate with T. V. A. power. Number of test-demonstration farms reaches 20,000 in 15 States. Third electric furnace installed at Shoals phosphate plant, increasing installed capacity to 75,000 tons a year. Chattanooga, Lincoln County Electric Membership Corporation (Fayetteville), Paris and Trenton, Tenn.; Cherokee County Electric Membership Corporation (Centre), Joe Wheeler Electric Membership Corporation (Decatur) and Guntersville, Ala.; and Northeast Mississippi Electric Membership Corporation (Oxford) and Tippah Electric Power Association (Ripley), Miss., contract for T. V. A. power.

1938: Tennessee Supreme Court decision directly affecting Paris, Fayetteville, and Clarksville, Tenn., removes final barrier to use of Public Works Administration funds by Tennessee municipalities for construction of electric distribution systems. Congress orders investigation of T. V. A. T. V. A.'s Shoals phosphate plant begins manufacture of 62 percent concentrated phosphate, highest concentration in history. First long-haul shipment of gasoline on the improved Tennessee River. Eighteen privately owned electric utilities bring suit against T. V. A. in Federal Court. Case decided for T. V. A. by three-member Federal Court sitting at Chattanooga. T. V. A. buys transmission and distribution properties from Tennessee Public Service Co. (Knoxville) for $2,549,488, from Holston River Electric Co. for $87,500, from Kentucky-Tennessee Light & Power Co. for $125,000, and from Grainger County Electric Co. for $7,500. Aberdeen, 4-County Electric Power Association (Columbus), Tallahatchie Valley Electric Power Association (Batesville), Water Valley, Columbus and Starkville, Miss.; Bessemer, Albertville, Cortland, Fort Payne, Hartselle, Scottsboro, and Tarrant City, Ala.; Brownsville, Carroll County, Clarksville, Columbia, Etowah, Fayetteville, Humboldt, Lenoir City, Lewisburg, Newbern, Cumberland Electric Membership Corporation (Clarksville), Ripley, and Weakley County, Tenn.; and Blue Ridge Electric Association, Inc. (Young Harris), Ga., contract for T. V. A. power. First local-planning assistance program established by T. V. A., in cooperation with the Alabama State Planning Commission, at Guntersville, Ala. Pickwick Dam completed. Construction of Kentucky Dam started.

1939: Congressional investigating committee upholds T. V. A. United States Supreme Court decision for T. V. A. in 18-utilities suit ends long litigation by privately owned utilities and others seeking to stop the Authority's power program. Congress amends Tennessee Valley Authority Act to enable Authority to issue maximum of $61,500,000 in bonds, principally to finance its share in the purchase of all the electric properties of the Tennessee Electric Power Co. All electric properties of the Tennessee Electric Power Co. bought by T. V. A., 22 municipalities and 11 cooperatives; T. V. A.'s share $44,949,400. T. V. A. buys blocks of properties from Memphis Power & Light Co. for $2,110,000, from Mississippi Power Co. for $1,333,000, from West Tennessee Power & Light Co. for $250,000, and from Bells Light & Water Co. for $7,840. First long-haul shipment of grain on improved Tennessee River. T. V. A. power operations reach paying basis. Power revenues in fiscal year total $5,445,197. Fiscal year's net income from power program more than $1,478,000, enough to absorb net power expenses brought forward from all preceding years and leave net income of nearly $900,000. Tennessee River freight reaches all-time peak of 91,000,000 ton-miles. T. V. A. report on the effects of rail freight-rate structure on the Southeast and Southwest submitted to Congress and published as a congressional document. Fourth electric furnace installed at Shoals phosphate plant, increasing installed capacity to 100,000 tons a year. Alcorn County (Miss.) Electric Power Association first distributor of T. V. A. power to become entirely debt-free. Cost of system paid out of earnings in less than 5 years. Alcorn first T. V. A. distributor to reduce rates below T. V. A. basic standard. Electric Home and Farm Authority transferred from T. V. A. to Federal Loan Agency. Nashville, Cleveland, Athens, Upper Cumberland Electric Membership Corporation (Carthage), Plateau Electric Cooperative (Oneida), Sequachee Valley Electric Cooperative (South Pittsburg), Tri-County Electric Membership Corporation (Lafayette), Meriwether Lewis Electric Cooperative (Centerville), Clinton, Gallatin, Harriman, La Follette, Lawrenceburg, Lexington, Loudon, McMinnville, Maryville, Mount Pleasant, Murfreesboro, Newport, Rockwood, Sevierville, Sweetwater, and Winchester, Tenn.; Louisville, Central Electric Power Association (Carthage), East Mississippi Electric Power Association (Meridian), Natchez Trace Electric Power Association (Houston), Macon and Philadelphia, Miss.; Murphy, N. C.; and Hickman-Fulton Counties Rural Electric Cooperative Corporation (Hickman), Ky., contract for T. V. A. power. Guntersville Dam completed. Construction of Watts Bar Dam started.

1940: Congress orders construction of Cherokee Dam and Watts Bar steam plant and installation of additional generators in Wilson and Pickwick Dams to increase installed capacity of T. V. A.'s power system by 360,000 kilowatts and supply power needed to produce more aluminum for airplanes in national-defense program. Construction of Cherokee Dam started within 24 hours on fastest work schedule ever attempted in United States large-scale dam construction. Congress amends Tennessee Valley Authority Act to enable the Authority to make payments to States and counties in lieu of taxes. T. V. A. buys block of properties from Alabama Power Co. for $1,989,000. A T. V. A. engineer, John H. Walthall, discovers a process for making alumina, raw material of aluminum, from clays found in abundance in the valley. First shipment of automobiles on the Tennessee River. Reynolds Metals Co. contracts for T. V. A. power for new aluminum plant at Sheffield, Ala. Six years of collective-bargaining relationship with employees formalized by signing of a contract between T. V. A. and the Tennessee Valley Trades and Labor Council, representing 15 union-labor organizations affiliated with the American Federation of Labor. Tennessee River freight sets all-time peak for second year in succession with 97,000,000 ton-miles. Steamer *Golden Eagle* voyages to Chattanooga; first passenger boat on the improved Tennessee River upstream from Muscle Shoals and largest ever locked through the upper dams. Number of test-demonstration farms reaches 30,000 in 22 States. Contracts for T. V. A. power signed by Benton County, Jellico, Springfield, Tennessee Valley Electric Cooperative (Savannah), Appalachian Electric Power Association (Jefferson City), Fort Loudoun Electric Cooperative (Madisonville), and Holston Electric Cooperative (Rogersville), Tennessee, North Alabama Electric Cooperative (Stevenson), Sand Mountain Electric Cooperative (Fort Payne), and Huntsville, Ala., and West Point, Miss. Hiwassee and Chickamauga Dams completed. Construction of Fort Loudoun Dam started.

1941: Congress increases T. V. A. appropriation to speed up construction of Fort Loudoun Dam by a full year for national defense. At request of United States Army, T. V. A. starts reconstructing and enlarging Muscle Shoals plant to product ammonium nitrate for use in explosives; maximum capacity 300 tons a day. T. V. A. develops new type of demountable house, produced by factory mass-production methods. Federal Works Administrator designates T. V. A. his agent to construct 250 houses at Florence,

Sheffield, Tuscumbia, and Muscle Shoals City, Ala., and 100 houses at Humboldt and Milan, Tenn., to house industrial workers engaged in national-defense production. One hundred and fifty of the Alabama houses and all the Tennessee houses to be of T. V. A.'s new portable type, so defense housing can be moved swiftly to meet changing needs. Fifth electric furnace authorized for Shoals phosphate plant, to increase installed capacity to 150,000 tons a year. Move spurred by England's need for concentrated phosphate to strengthen its land for war effort. One hundred and twenty-five millionth tree seedling from T. V. A. nurseries planted on valley land to check soil erosion and build forest resources. T. V. A. phosphate used by thirty-five thousandth test demonstration farm. Demonstration program covers 27 States. T. V. A. phosphates being tested by State agricultural experiment stations in 47 States. Seven millionth visitor sees T. V. A. projects. Contract for T. V. A. power signed by Caney Fork Electric Cooperative (Smithville), Tenn. T. V. A. power-generating system passes million-kilowatt mark in installed capacity, becomes eighth largest in Western Hemisphere. Customers buying T. V. A. power at rate of 6,000,000,000 kilowatt-hours a year. Authority's power revenue coming in at rate of about $21,000,000 a year. Net income enough to defray all costs of operating the T. V. A. system for navigation and flood control as well as for power production and still leave a net balance.

A Perplexed President—A Dazed Congress

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

A PERPLEXED PRESIDENT

Mr. HOFFMAN. Mr. Speaker, the administration is on its way, and there is no speed limit; but just where it is going, why it is going, and where the destination no one seems to know.

With all the uncertainty, two things seem clear. We are headed for trouble—plenty of it. But what it will cost us in taxes, lives, and loss of freedom no one seems to have considered. Each day sees some new move toward war or preparations for war; more spending without thought of the taxes to be levied to pay for it.

Recently, the President caused his spokesmen, including Stimson, Wickard, Warburg, Knox, and many others, to tell us in substance that war was inevitable and that the Axis Powers must be destroyed. Typical is the statement of Secretary Knox, who, on May 11, said that it is our duty "to oppose the aggressor with enough force either to scare him off or to defeat him."

The aggressor, of course, means Hitler. We know Hitler will not scare. So we must defeat Hitler by force. Might we inquire where we are to apply this force? Can we defeat Hitler without sending an army to Europe? Whatever our feelings, can we succeed in that undertaking?

If we continue our present course and sometime, somewhere, we get into war with the Germans, the Italians, the Japanese, the Bulgarians, Rumanians, Hungarians, Turks, and the French, how long will it take us to defeat them and what will it cost in taxes and lives?

The President is perplexed because he has promised unlimited aid to Britain, and because he has promised to keep us out of this war, not once, but many times. Which promise shall he violate? He knows we do not want war, so he is worried. Perhaps the clearest of those promises is the one when he said:

> And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again—your boys are not going to be sent into any foreign wars.

But he has promised all needed aid to Britain.

A DAZED CONGRESS

Congressmen know—at least, most of them—that the American people do not want war. They know that the administration is driving toward war. Congressmen had an opportunity to duck this issue in 1936, when LOUIS LUDLOW, of Indiana, introduced a war-referendum resolution, which would have given the people a vote on the question of going to war. Again, in 1937, Senator CAPPER made a like move and, in January of 1939, Democratic Senator CLARK, of Missouri, introduced a bill for a constitutional amendment which would have required a national referendum before the country could become involved in war.

But, at the request of the administration, Congress blocked this legislation, denied the people the opportunity to decide whether they wished to take part in a war which they, the people—not Congress, the Cabinet, or the President—would fight. And so now, the issue is back on Congress' doorstep. Do they like it? Not at all. But it is there and many of them are in the same predicament as the President. They, too, promised the people before election they would not involve this country in war. And now they find administration pressure applied to compel them to acquiesce in steps which will bring war.

ANOTHER WORRY

Congressmen know, too, that we cannot prepare for war or even for national defense, if strikes continue and production is slowed down or stopped in our factories. They know that we cannot win through our present emergency if we subscribe to the doctrine that a man cannot work here in what was free America until he meets the demands of a labor organization which would compel him to join its ranks and pay whatever fees and dues its leaders may impose.

They know that America cannot be free under such a system. But they lack the inclination or the courage to meet the question. And, between the indignant, outraged expressions of opinion which they get from their constituents and their fear of so-called labor leaders, they are doing just nothing except sweating and worrying.

If we are to keep out of this war and prepare for national defense, center your mail on the President or those Senators and Congressmen who are war-minded and who are afraid of union politicians and racketeers.

Defense of the Western Hemisphere

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

Mr. WICKERSHAM. Mr. Speaker and members of the House, the latest Nazi conquests in Europe have brought a total of over 662,500,000 people under Nazi, Communist, and Fascist regimentation. This means that about one-third of the world's population must follow the dictates of the Axis Powers. For the Americas the decisive phase of this war has begun with the announcement that France and its colonial empire are to be put, we might say, at the disposal of Hitler. The Vichy surrender is a blow to the United States from the point of view of all the American republics, it is by all odds the most serious development of the present war. It is, in fact, the most serious threat to the independence and security of the entire Western Hemisphere since the eventful invasion of Mexico by Napoleon III on the eve of the Civil War.

The boa constrictor is tightening his coils around us, it seems. If we do not establish ourselves in positions where it cannot crush us we will have a terrible fight later on. I am against war, and believe if we hold the outposts, they cannot get at us. If we have to take the outposts after they have them, then there might be much bloodshed. In order to avert this, I believe we should accept the French colonies at this time in payment of the French war debt. We should not wait, as some countries have, until it is too late.

The President has wisely stood by his commitment not to become a belligerent in a foreign war. But what confronts us now is not a foreign war, and not a British war, and not, we hope, any total war. What confronts us now is a threat which bears more directly upon our own vital interest than upon those of Britain, for the defense of the Western Hemisphere is first, last, and always an American problem. I believe our Congress and our President fully realize the great danger and grave peril, as well as the grave decisions upon which depends the future security of the liberty-loving citizens of this world.

There Must Be No Black-Out of the Bible

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

Mr. SHANLEY. Mr. Speaker, two notices of unusual spiritual import have come to me and probably to every other Member of the Congress in the last few days. The first, from the American Bible Society of New York, carries within its folder a letter from the most beloved of Yale's professors, Prof. William Lyon Phelps. That letter is worthy of reprinting, and I am taking the liberty of inserting it here.

The time for letting other people guess where we stand in spiritual matters is past.

Possessing a message which can save floundering mankind, and a textbook which contains that message, Christian people have a clear duty to proclaim it in every possible way.

Believing as I do that the Bible does contain the positive answer to the world's despair, I am concerned that it shall everywhere have the widest possible circulation in these difficult days.

No other agency in this country, to my knowledge, is "holding forth the Word of Life" as is the American Bible Society, which was dedicated 125 years ago to perform that single task.

Through the society this positive answer can be given, but only if a greatly increased income is provided. For not only must its own carefully budgeted program be maintained, but there are now the added responsibilities and opportunities caused by the warfare which is sweeping the world.

In order that the necessary support may be secured, I heartily commend the society's current seal campaign to your generosity. Your gift will help to prevent a black-out of the Bible.

My own faith has just published The New Testament of Our Lord and Savior Jesus Christ, translated from the Latin Vulgate, a revision of the Challoner-Rheims version edited by Catholic scholars under the patronage of the Episcopal Committee of the Confraternity of Christian Doctrine, published by St. Anthony Guild Press, Paterson, N. J., 1941. It is with particular pride that I mention this because the entire distribution and sale of this splendid work come under a townsman of mine, the Very Reverend Harry C. Graham, O. P., national director of the Holy Name Society, who is the spearhead of our attempt to place a New Testament in the home of every Catholic.

This work has the highest endorsement of the president of the Pontifical Biblical Commission, Eugene Cardinal Tisserant, and His Excellency, Most. Rev. Edwin V. O'Hara, bishop of Kansas City, Mo., in which they praise the use of May 18 as Biblical Sunday in the United States and entrusting the task of distributing the New Testament to the national headquarters of the Holy Name Society.

It is the fullest fruition of the encyclical letter Spiritus Paraclitus of Pope Benedict XV on the Reading of Holy Scripture. That magnificent encyclical closes with this superb thought:

Our one desire for all the church's children is that, being saturated with the Bible, they may arrive at the all-surpassing knowledge of Jesus Christ.

Mr. Speaker, I reiterate my belief that these two organizations representing the Protestant and Catholic faiths of this country are fulfilling a truly democratic mission when they seek to place in the homes of every one of their communicants the New Testament.

Tax Whom?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE BY FRANK C. WALDROP

Mr. MICHENER. Mr. Speaker, pursuant to the privilege given to me to extend my remarks in the RECORD, I include an article appearing in the Washington Times-Herald, of Saturday, May 17, by Frank C. Waldrop.

Every Member of Congress is receiving letters protesting against proposals now before the Ways and Means Committee, providing additional taxes to finance the present spending program, and Mr. Waldrop's article is pertinent.

The article follows:

[From the Washington Times-Herald of May 17, 1941]

DOLEFUL NOTE

Here is a letter from a gentleman who has been studying the schedule of proposed taxes now being considered in Congress. It is a very enlightening letter, both for what it says and what it leaves unsaid:

The WASHINGTON TIMES-HERALD,
Washington, D. C.

GENTLEMEN: The proposal of the Treasury Department that a new tax bill include a luxury levy of 10 percent on musical instruments is unsound. Not only do I believe that it is unsound, but it is dangerous.

I believe that musical instruments are tools of education and of trade. I think I am expressing the opinion of the majority of music dealers as well as artists, manufacturers, and educators when I make the assertion that millions of boys and girls are studying music because it benefits as an educational medium.

In these troublesome times we should think of music as we did in the last war when it was thought necessary in stirring patriotism and stimulating morale in both the military service and at home. Friends of music all over the country are writing and wiring in opposition of this tax.

You are at liberty to quote my feelings in this connection if you wish.

Yours very truly,

HOMER L. KITT.

You can guess easily enough that Mr. Kitt has a special interest in musical instruments or he wouldn't have written that letter. You are right. He sells musical instruments. High taxes on musical instruments mean fewer sales.

Mr. Kitt is fighting for his economic life when he writes a letter like this, and that, regardless of how much he may say about the need of music for patriotic and educational purposes, is his main purpose in sending the Times-Herald this letter.

But just a minute. Don't condemn him. His economic life is just as precious to him as yours is to you. Mr. Kitt is no more selfish, nor any less, than the newspapers when they fight for their lives against high taxes, or the farmers when they fight for their lives against high taxes.

The value of musical instruments to the community is real, just as the value of newspapers is real—we hope, we hope—and the value of farmers is real.

What concerns Mr. Kitt is that the Treasury Department may convince Congress that the musical instrument trade is less valuable than some other, and thereby snuff out its life.

Well, we hope not, for the sake of Mr. Kitt and all the other people who make their livings out of music and have enjoyment from it.

But somebody's business is going to take a beating before long. If the tax does take effect and horns are quieted and pianos unmade, chalk up just one more casualty of the war.

The horns and pianos will have gone to join the aluminum pots and pans—remember how the Office of Production Management put 10,000 aluminum-utensil makers out of work recently by decreeing the end of aluminum kitchenware, and the 20 percent of normal automobile production to be sliced off, and the thousand and one other things common to our way of life. Now all are under the gun.

We are beginning to catch a glimmer of what General Goering meant when he said "guns instead of butter."

But only a glimmer. Do you have any idea what our military commitments sum up to at this point? Let's run over the list of most obvious ones. Mr. Roosevelt has implied we are going to establish "four freedoms" all over the earth which do not now exist really anywhere on the earth entirely.

We are also committed, under the lend-lease bill, to give any nation he designates, whatever actual, tangible military goods and equipment he designates. Specifically, we have promised help to England, Poland, France, Norway, Denmark, Czechoslovakia, Yugoslavia, Greece, Holland, Belgium, Finland, and China. Perhaps to others also, but all these are on the public record.

To some of these we have actually made deliveries of goods. We are delivering an increasing volume wherever we can.

We are also committed to prevent invasion of the Western Hemisphere, and this is generally assumed to mean any point from the North Pole to the South, lying between Hawaii and the mid-Atlantic.

To achieve this system of defense we are doubling our Navy, building an Army of millions, and are laying the basis of 50,000 airplanes a year, plus 500 heavy bombers a month extra.

All these are our commitments. And we are the kind of country that goes through, strangely enough, in such matters.

Merely to build our defense of the Western Hemisphere is going to cost a lot more than present suggestions on taxes would signify, and the investment will be well worth every penny.

To send arms to all those countries which we have promised to help will multiply the unknown.

To follow those arms with men and to establish the four freedoms—wow!

Mr. Kitt get out your fiddle and play while you can.

Let Us Keep the United States Out of Entangling Foreign Alliances and Europe's Wars by a Pro-American Policy

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RADIO ADDRESS BY HON. PHILIP A. BENNETT, OF MISSOURI

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks I wish to include the following radio address given over KMOX, St. Louis, Mo., on Saturday, May 10, 1941, by our colleague, the Honorable PHILIP A. BENNETT, of Missouri.

This is a critical hour for the Nation. While we are at peace with all of the world, there are people in this country who labor unceasingly to drag us into Europe's wars.

From a movement almost imperceptible at first, the tempo of their efforts has increased so rapidly during the past few months that one hesitates to forecast what new demands will be made in behalf of Great Britain on the morrow. While I do not question the faith or honesty of those who would plunge this Nation into war, I do question the underlying objectives of the war and the wisdom of the course they are asking their nation to follow. We all realize that a major crisis is rapidly approaching. And that crisis I do not believe is one that originates with or springs from our own problems of national defense, but rather is a crisis which had its beginnings in the secret diplomacy of Europe and the financial intrigues of the world's international bankers. From my study of the causes leading up to the present world conflict, I am convinced that world trade and gold are far more important factors in this war than any idealistic factors like freedom and democracy. In fact, I find substantial grounds for my opinion in the statement of Wendell Berge, Assistant Attorney General of the United States, at DeLand, Fla., last Saturday night, when he said, "This is admittedly a contest of economic power." Incidentally, I believe it is also a contest to preserve the profit system in Europe. With all of Russia devoted to communism and the Axis Powers doing business according to the socialistic philosophies, Great Britain and the United States are the only remaining nations that might be classified as capitalistic. And I pause to observe that capitalism has in this country at least been one of the cornerstones of freedom.

I have referred to the secret diplomacy of Europe. We know very little about the diplomatic maneuvers preceding the present conflict. But Joseph Stalin has lifted the curtain on at least one of the happenings. Speaking before the supreme parliament of the Soviet Union, on August 31, 1939, on the British failure to conclude a pact between Poland, Germany, and Russia, he said:

"They (England) needed a pact to guarantee Poland, but they did not concern themselves with Poland herself, who rejected the idea of assistance from the Soviet Union.

"How, under such circumstances could the Soviet Union proffer aid? Britain and France guaranteed aid to the Soviet Union in case of aggression in return for corresponding assistance. But their offer was so hedged about with clauses and peradventures, as to suggest that in case of need, their aid would prove fictitious, leaving the Soviet Union without effective assistance."

So Russia did not sign up with Great Britain and France. She chose to wait and when Hitler moved into Poland, so did Mr. Stalin and he got a big slice of Polish territory almost without a struggle.

Incidentally, both Great Britain and France failed to send troops to Poland when she was invaded, which gives some substantiation to the misgivings of Stalin as to the sincerity of their promises.

The story of the war since September 1, 1939, is generally known. In the last 18 months we have been doing our best to build up our own national defenses. And in that objective, I am sure every American will concur. In the meantime we have done much for England and her allies. These, of course, are small sacrifices, by comparison with those we will undoubtedly be asked to make in the near future. They are the sacrifices that 83 percent of the American people wish to avoid. They want to keep America out of war. They want to keep our boys here at home ready to defend America against the whole world if necessary. They see nothing to be gained by sending your son and mine into the slaughter pens of Europe, Asia, or Africa, and they as American citizens are entitled to have their wishes, majority wishes if you please, respected by their Representatives in Congress.

Last year the Democratic and Republican Parties, assembled in convention, adopted platforms which pledged their candidates to keep America out of foreign wars. As one elected to Congress upon the Republican platform, I feel that it is my solemn duty to carry out my party's platform pledges to the people to the utmost of my ability. However, I am grievously concerned, and sorry to report to you, that in Washington there is a growing disregard, not only for the platform pronouncements, but for the overwhelming desires of a majority of the American people. And that disregard, in itself, is a sign of the decay of representative government.

We are, in fact, approaching a dangerous situation when the duly elected representatives of the people turn a deaf ear to the pleas of their constituents. In a recent press conference the President is reported to have remarked: "Convoys mean shooting and shooting means war." This statement, coming from the elected leader of the Nation, coupled with his promise of October 30 at Boston, and I quote:

"I have said before and I say it again, and again, and again. Your boys are not going to be sent into any foreign wars," have me figuratively up a tree as to what his intentions really are. When one considers the fact that Secretary Knox and Secretary Stimson are both for manpower aid for Britain; when one considers the President's statement at Staunton, Va., last Sunday, that: "We are bearing true witness to the faith that is in us—a simple faith in the freedom of democracy in the world. It is the kind of faith for which we have fought before—for the existence of which we are ever ready to fight again," one cannot come to the conclusion the President is uninformed. Thus the announcements by his aides bear his official approval, even though they are in direct conflict with the pledges made by the Democratic Party to the people, and by the President as a candidate for reelection. Amidst the confusion of this trying hour. I ask you to be cautious in your appraisal of the present situation. Let us all stop, look, and listen before our country is plunged into war.

In a few short months the policy of this Government has changed from a cash-and-carry neutrality, to a lease-and-lend belligerency, and we are now being importuned by the British and their spokesmen in this country to deliver the goods to England. This, of course, means convoys—convoys mean shooting—shooting means war.

It is significant to observe at this point that among those who favor America's entry into the present conflict, are to be found many of the economy-minded gentlemen who only a few months ago were busily criticizing the present administration for trying to take care of the poor, the unfortunate, and the unemployed here at home. Thus does war make strange bedfellows.

In concluding, may I summarize the situation as I see it? With this Nation now struggling under the appalling burden of a $50,000,000,000 national debt, we are still able to give or withhold the aid to Great Britain which, over a long period of years, will spell the difference between victory and defeat. But we must be prepared to go down the long road—to make many sacrifices—to forego many pleasures.

In making those sacrifices, not essentially for ourselves, it is doubly essential that while doing so, we shall not forget to preserve the bulwarks of freedom, of opportunity, and of justice at home. To do this requires a tolerant respect for the opinion of one's neighbor. It requires a sympathetic understanding of any man's right to honestly disagree with his fellow man upon the ends that may be achieved either through war or by a negotiated peace.

It is this thought that impels me to counsel you to cling to the principles laid down by George Washington and all the great leaders who have followed him in the Presidency of the United States.

The destiny of America must not be tied to the destiny of the British Empire. The destiny of America rests in the hands of her own people. Will you listen to the voices of the warmongers or will you demand that party platform and campaign promises be kept. Now is the time for action. Speak while you have opportunity. Remember that under dictatorship the only voice of the people is the cry of woe.

Our First Defeat

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE BY DAVID LAWRENCE

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, in the current issue of the United States News of May 23, 1941:

[From the United States News of May 23, 1941]

OUR FIRST DEFEAT—ADMINISTRATION AND INDUSTRIAL MANAGEMENT SURRENDER AT POINT OF GUN AS LABOR GETS 100 PERCENT OF ITS WAGE DEMANDS, THUS INCREASING DEFENSE COSTS AND STARTING INFLATION

(By David Lawrence)

The biggest news for America last week was not the flight of Rudolf Hess.

Nor the decision of Marshal Petain to turn the African colonies of France over to Hitler. Nor the rise of Axis power in the Near East.

The biggest news happened here at home—in Washington, where President Roosevelt suffered the most ignominious defeat of his public career. Unable or unwilling to deal with the C. I. O. any other way, he permitted his own National Defense Mediation Board to grant 100 percent of the wage demands of the auto workers' union and thus set the pace for a Nation-wide set of wage increases even as the Government strove feebly in other quarters to argue against price rises and inflation.

It was not the management of General Motors which surrendered in the settlement recommended by a board of President Roosevelt's choosing. It was the Government of the United States which surrendered. At a time when the youth of the Nation is being compelled to serve at $21 a month, the auto workers had their pay boosted by $208 a year. With overtime it will mount still higher. Nearly 70 percent of the total number of employees already were earning $2,000 to $2,500 a year.

The new increase in wages, estimated to be about $50,000,000 a year, is equivalent to about a full year's pay for 200,000 draftees or the personnel of 17 modern army divisions.

ENTIRE COST OF LIVING AFFECTED BY WAGE BOOSTS

The General Motors Corporation can stand the increase but can the American people stand it? For the wage level set in one company affects all the others and likewise raises the wage scales in related industries. And the American people will have to pay the increased costs all along the line. Prices certainly cannot be held down if wage costs increase. The scales paid for nondefense work automatically become the prevailing wages paid for defense work. Many of the auto workers are about to be transferred to defense contracts as the Government compels a 40-percent reduction in automobile production. On most of the defense contracts the big manufacturers are making less profit by a good deal than on their normal operations. This is because many of the contracts are on what is known as a cost-plus-fee basis. The fees fixed are amazingly small in relation to operations on nondefense work and usually net the companies only about 1 percent of the gross amount of the contract. But the wage costs—well, these can skyrocket anywhere, for the companies do not pay them. The American people do. And the principal agent of the American people is the President of the United States, who is supposed to keep the costs of national defense down instead of letting them go up to any heights demanded by a minority group of citizens at the expense of the vast majority.

LABOR IS USING ECONOMIC POWER AS BLUDGEON

Why didn't the General Motors Corporation refuse to grant the wage increase, knowing that the effect on our economic system and on the cost of the defense program would be damaging?

The answer is that the General Motors Corporation had no alternative. It if refused the demand, it would have brought on a major strike involving some 250,000 employees. And in strikes nowadays there is no protection whatsoever for the men who want to work. There no longer is a democratic method of taking a strike vote. The laborers, moreover, who disagree find themselves coerced by pickets who use violence. The President of the United States and the Governor of the State of Michigan recently refused to enforce the laws with respect to mass picketing and violence at the Ford plants. What assurance would the General Motors officials have had that they could operate their plants if they refused the union demands? None whatever.

There was a time when the Nation was led to believe that the only thing wrong with the labor problem was the refusal of management to bargain collectively. This was supposed to be the difficulty in the Ford case. But here is an instance in which one of America's largest employers has bargained collectively, in fact has had a union contract ever since the sit-down strikes of 4 years ago. Now that labor has achieved the right of collective bargaining, what is labor doing with its economic power? Is it exercising self-restraint in a national crisis or is it out to get all it can, irrespective of the effect on the rest of the citizenry? Unhappily the answer must be given that labor's leaders are abusing their economic and political power. The record belies any other conclusion.

The definition of "collective bargaining" in this case can plainly be written today as collective bludgeoning—a complete surrender by management to whatever wage rates labor happens to demand. In this instance it is plain, too, that the full acquiescence of the Roosevelt administration was behind the surrender.

There was another demand—the closed shop—which would have meant a complete monopoly for the C. I. O. auto workers' union as against the A. F. of L. This was abandoned by the union for the present—it meant no financial sacrifice to give it up and was doubtless a trading point from the beginning. Anyway, the C. I. O. has the exclusive rights of representation for the majority, and, having secured a large wage increase, the closed-shop provision becomes less important to the union. The issue will be revived in due course—1 year hence. The unfortunate truth is that General Motors, compelled by circumstances over which it had no control, denied potential protection if it refused to accede, took the only course available—capitulation.

But the responsibility is on the Roosevelt administration, which not only encourages wage boosts but declines to tax these profiteering benefits.

INEQUITIES IN TAX LAWS WILL CAUSE INFLATION

What may not be generally realized, however, is that the workers are committing economic suicide by allowing their selfish leaders to insist on higher and higher wage scales. The vast amount of purchasing power created by the pay-roll increases must go somewhere. It will be found bidding soon for consumer goods. The Government will try to hold prices down. This is impossible unless wage costs are held stagnant. The Government will force a curtailment of production in certain nondefense articles because of scarcity of raw materials, but this will not affect a large number of articles which will go up in price because labor costs there, too, will rise, and an extraordinary demand usually boosts the price.

We are on the threshold, therefore, of an inflation cycle of incalculable proportions. The well to do will be taxed heavily—in fact, to the point of confiscation. About 700,000 persons with incomes of $5,000 a year or over will have to bear the principal burden—they will pay 75 percent of the increased taxes. They will economize and also their incentive will be repressed. Meanwhile, because of politics, about $12,000,000,000 of gross income earned by 80 percent of America's families in the lower brackets will escape income taxes and direct defense taxes.

Because of politics also, the administration is just now boosting farm prices by Government loans.

ADMINISTRATION DOMINATED BY POLITICAL FEAR

This combination of political chicanery doesn't make sense for anybody—not even for the supposed beneficiaries. Because when inflation starts it affects the lowest income groups first and especially the large number of persons like school teachers and employees of Federal, State, and city governments, whose salaries rarely are boosted. It is usually long after the hardships of an increased cost of living have begun before persons with more or less fixed wages or salary rates are given increases to offset rises in the cost of living.

Economic leadership in Washington plus a certain courage to fight against selfishness in whatever form it rears its head could have averted the defeat last week in Washington. But so long as political fear dominates the governing authorities, there can be no effective leadership in a war emergency.

It is precisely this sort of decay and disintegration from within democracy that gave Hitler his chance in the last 8 years. The French Republic collapsed because of this very internal poison.

America is supposed to be in grave danger. The President himself says it is the most critical era in the history of our Republic. Democracy is believed to be fighting for its life. But judging by what is happening in Washington, the disposition is not to save America but to save the New Deal—to conserve its political power and to curry favor with groups which can win another election.

The public has a right today to make such an inference and to call an administration incompetent and inconsistent which, on the one hand, cries out about keeping prices down, and, on the other hand, encourages a rise in labor costs and farm prices.

It was the farmer and labor alliance which gave the New Deal its third term. It is the fear of the farm and labor vote by a selfish group of politicians that may be giving America its last term of free government.

For the economic collapse that must some day follow such foolhardy policies as are being pursued today must inevitably produce a terrible reaction against democratic government and sow the seeds of fascism in America.

Excise Tax on Automobiles

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

STATEMENT BY L. C. CARGILE, PRESIDENT OF NATIONAL AUTOMOBILE DEALERS ASSOCIATION

Mr. CRAVENS. Mr. Speaker, under permission granted me to extend my remarks in the Appendix of the RECORD, I include a statement of Mr. L. C. Cargile, of Texarkana, Ark., president of the National Automobile Dealers Association, made before the Committee on Ways and Means on Thursday, May 15, 1941, as follows:

My name is L. C. Cargile, 308 Olive Street, Texarkana, Ark. I am appearing as president of the National Automobile Dealers Association. Our association has upward of 17,000 members, each of whom is enfranchised by a manufacturer of automobiles to sell new automobiles, or automobiles and trucks, replacement parts, and accessories. Our members sell about 85 percent of all new automobiles sold in the United States. Through the 17,000 dealers who are direct members, and by reason of the cooperation of local and State automobile dealer associations, this association speaks for all automobile dealers who are articulate through organization.

I wish to present some comments on the Treasury Department recommendation to increase the excise tax on new automobiles from 3½ to 7 percent, and upon the recommendations of previous witnesses to increase

that tax to 20 percent or more. I should also like to comment on their suggestion to extend the tax to used cars. I also wish to record that our association opposes the proposal to increase excise taxes on accessories, replacement parts, and tires, the proposal for an usage tax, and the proposed increase in the gasoline tax, as being discriminatory.

I desire to state emphatically that this organization and its members wish to pay their fair share of whatever the cost of the defense program may be. As citizens and as businessmen we wish to have inflation avoided and we are aware of the dangers of uncontrolled prices in a war economy, but we are concerned because of the threat to the existence of dealers and their employees.

The automobile industry consists of three component groups—manufacturers, labor, and dealers. Throughout the duration of this emergency there will be opportunity for the use of the production capacity of the automobile plants and for the management of the manufacturing concerns in the production of primary defense materials. The automobile factory workers will likewise have increasing opportunity during this program, but that group consisting of the dealers and their employees are not only faced with lack of opportunity, but indeed may be forced out of business and employment. The dealers are making and will continue to make their contribution to the national defense, in a less direct and in a less publicized way, but in the nevertheless essential capacity of maintaining the highway transportation system in working order. As shown by the 1939 business census, automobile dealers are employers of 316,702 employees, with a total pay roll of $420,588,000 a year. Automobile dealers are important members of the business life in every city and village, and their continuance in business depends directly on there being automobiles to sell and to service. We recognize that the necessity of the defense program may force groups of men out of business, but as one of those groups facing that possibility, we are properly anxious that this result follow only in the extremity that it be necessary in order that the country may survive.

Motortruck transportation and private passenger transportation by automobile are absolutely essential to the defense program and keeping those now on the highway in continued operation and replacing those that are continually wearing out is the job of automobile dealers in the defense program which must not be interfered with. The speedy and uninterrupted transportation by truck is essential in the movement of goods to and from defense plants, is essential to bring the farm products to market, and to transport workers to defense plants in addition to the heavy normal requirements of nondefense workers. The millions of unemployed men who are being taken in to work in new defense plants, who will have to rely upon private automobiles for transportation to and from work, particularly in many new plants which are being built in locations which can only be reached by private automobile, are causing an increasingly heavy burden on the cars now in operation. In the interest of national defense, the supply of automobiles must not be allowed to decrease either through lack of facilities to keep present cars running or the lack of new automobiles to replace those daily wearing out and going to the junk pile.

Previous witnesses before you have proposed several objectives to be achieved by increasing taxes, in addition to raising revenue for defense expenditures. It was suggested that a high excise tax on automobiles would tend to discourage purchasing new cars, thereby resulting in decreased production, freeing materials, labor, and management for defense industry. It was also suggested that such decreased production and consumption would be desirable in order to build up a backlog of demand which, when released after Government spending for defense had ceased, would tend to stabilize the economy. There was a suggestion that a curtailment by a high tax would divert consumer spending to goods not competing with defense, or divert money into savings.

I am not qualified to express any opinion on how much money should be raised for the defense program at this time, and it is not becoming that I should do so. We do wish to urge, however, that the tax matter under consideration be viewed solely as a revenue raising measure and that the other suggested objectives which may be a part of an emergency period be approached directly and not indirectly through the tax device. It is impossible to predict whether a tax with a double purpose will produce the revenue expected or accomplish the secondary objectives. The suggestion to tax new cars 20 percent in order to curtail production might or might not curtail production. If it did curtail production, it would fail to produce the stated revenue, and if it did not curtail production it would result in a grossly discriminatory tax greatly disproportionate to taxes on other articles.

The automobile industry has already expressed a willingness to reduce 1942 model production by 20 percent, and it has been indicated in the newspaper this week that a further cut may be forthcoming. There would seem to be no necessity for attempting to indirectly force restriction by taxation in the face of such voluntary action.

The members of this association at their annual convention in Pittsburgh in January of this year adopted the following resolution:

"Whereas the fulfillment of the national-defense program may require curtailment in the normal manufacture of automobiles; and

"Whereas it is the firm desire of automobile dealers to do their part in the national emergency: Now, therefore, be it

"*Resolved*, That if curtailment in the production of automobiles becomes necessary in order to better promote the national-defense program, automobile dealers, through the National Automobiles Dealers Association, pledge their efforts to support that measure and to render to the public the best service possible during the emergency."

In view of the expressed willingness of the manufacturers to agree to any necessary curtailment in the production of automobiles, and in view of the expressed willingness of dealers to accept such curtailment, and by reason of the fact that in O. P. M., under Mr. Knudsen, there is existing authority to regulate the production of automobiles during this emergency to make that production consistent with the requirements of the defense program, it seems unnecessary and unwise to approach this problem through taxation. Furthermore, many of the secondary objectives advanced as reasons for a high excise tax on automobiles, parts, and accessories will automatically be solved through the direct-curtailment method.

A tax provided in the revenue act would be less flexible than a direct-curtailment method, and if the secondary objectives of such a tax did not prove to be effected, it would be necessary to revise by legislation that revenue act. It would impose a terrific burden on this committee and on Congress to frequently revise revenue acts to meet changing conditions in production and consumer purchasing during such a fast-moving emergency. Furthermore, when the defense effort has been completed and it becomes desirable in the public interest to immediately recommence normal automobile production, it would be necessary to wait until Congress could repeal the high excise tax in order to make normal production possible.

A selective excise tax always tends to be discriminatory as between the taxed and untaxed goods. Furthermore, with a selective tax which does not cover a wide range of article competing for the customer's dollar discrimination is emphasized. This excise tax on automobiles as a luxury is unsound as the automobile is in no sense a luxury but is a vital form of transportation primarily used for business and commerce by the working man and the farmer. To put a very high tax on automobiles would greatly intensify the already existing discrimination and inequity of this tax, originating as an emergency tax and continuing year after year.

Furthermore, such a tax would be discriminatory within the automobile industry as it would operate more harshly against the manufacturers and dealers of all but the lowest-priced cars.

The place of the automobile in the American way of living is drastically different today from what it was during the first World War, when the first excise tax was placed on automobiles. At that time the few high-priced automobiles then used were of a luxury character. Their ownership was, for the most part, restricted to the wealthy and their use was primarily for pleasure. Today, however, the automobile has become a necessity as a means of private transportation, and the great majority of automobiles in use are owned by those in the lower income brackets. The automobiles has become widely accepted because of its constantly improved quality and serviceability and by reason of its lowered price. It is most unfair to penalize the efficiency that has brought about the widespread ownership of automobiles by imposing a high punitive tax merely because it may appear an easy way to raise revenue. Such expediency without thought of fairness may be expected in totalitarian states, but is wholly unworthy of our democratic tradition.

All of the objections to an excise tax upon new automobiles apply with even greater force to the proposals made by some witnesses to this committee that an excise tax be imposed on used cars. The Treasury Department recommendations did not include any tax on used cars, and such a tax could not be looked to to raise revenue as it would be impossible to administer. Furthermore, such a tax would lead used-car owners into all sorts of devices to escape the tax and it would have the tendency to disrupt the normal trading and sale of used cars. None of the other suggested objectives could be applied to used cars as they do not in any sense compete with any defense industry, no backlog of purchasing power could be built up as these are deteriorating and continually diminishing articles, and as the use of automobiles is essential, as has been pointed out, no impediment should be placed on their acquisition and continued use.

In conclusion, may I state that we recognize that money must be raised for the defense program; that we are opposed to any excise tax on automobiles, automobile parts and accessories, tires, tubes, batteries, and gasoline, as all of these are essential to a vital form of transportation; that in this emergency period excise taxes on these articles may be necessary for the additional revenue needed, but the rate of tax which should be imposed on these articles should bear a fair relation to other manufactured goods; and that the automobile industry should not be selected to bear a grossly disproportionate share of the additional cost in this emergency.

Commemoration of One Hundred and Fiftieth Anniversary of Adoption of Third of May Constitution of Poland

EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RESOLUTION BY THE UNITED POLISH ORGANIZATIONS OF SALEM, MASS.

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication addressed to the majority leader, Hon. JOHN W. MCCORMACK, by the United Polish Organizations of Salem, Mass.:

UNITED POLISH ORGANIZATIONS,
Salem, Mass.

The Honorable JOHN W. MCCORMACK
House of Representatives,
Washington, D. C.:

We, Americans of Polish descent, assembled in Salem, Essex County, State of Massachusetts, on this 11th day of May 1941, under the auspices of the United Polish Organizations of Salem, Mass., in commemoration of the one hundred and fiftieth anniversary of the adoption of the 3d of May Constitution of Poland, unanimously adopt the following resolution:

"Whereas we, Americans of Polish descent, recognize that the democratic Poland, the land of our forefathers, has been brutally invaded, without declaration of war, and divided by Nazi Germany and Soviet Russia;

"Whereas the most inhuman army of dictators in its march over hereditary Polish territory having destroyed and murdered thousands of helpless civilians, and having bombed defenseless hospitals, schools, and churches, wantonly and deliberately machine-gunned escaping refugees;

"Whereas the Nazi and Soviet Governments, having unjustly and unmercifully murdered thousands of priests, nuns, professors, and national leaders, and having sent other tens of thousands into concentration camps without just cause, and having deported large numbers of men, women, and children to Siberia to die of starvation or disease, substantiating our belief that the ultimate goal of the barbaric invaders is the destruction of the Polish Nation: Therefore

"We appeal to the President of the United States, the Senate, and the House of Representatives, as men of good will and understanding, to stop the attempted extermination of innocent people, and pray that a commission be allowed to distribute aid and relief to these stricken people; be it also

"*Resolved,* That we express our deepest gratitude to the Government of the United States of America, and especially to an ardent champion of our cause, Majority House Leader JOHN W. MCCORMACK, of Massachusetts, for recognition of the present Polish Government in England, thus proving to the world that it does not approve of the partition of Poland by the invading powers; and be it further

"*Resolved,* That we all present here swear and affirm our wholehearted loyalty and allegiance to the United States of America, and as loyal citizens we stand always ready to make the supreme sacrifice, should it ever be necessary."

ZYGMUNT WYSOCKI, *President.*

Which Way, America?

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

SPEECH OF PROF. FRANK PRESCOTT, OF THE UNIVERSITY OF CHATTANOOGA

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include herein a speech entitled "Which Way, America?" delivered to the Young Democratic Club of Chattanooga on May 13, 1941, by Frank W. Prescott, head of Adolph S. Ochs department of government, University of Chattanooga.

This is a thoughtful and well-reasoned statement. With its general theme I agree. I recommend it for the consideration of readers of the RECORD.

The speech is as follows:

Just 3 short years ago Dr. William E. Dodd, American Ambassador to Germany, spoke to a packed chapel convocation on the university campus. This eminent historian unfolded the story of his colorful career in Berlin and disclosed that Hitler was engaged in a plan of world revolution and barbaric aggression. He spoke with a rich background of intimate knowledge not only of the older German culture, in which he had attained his doctorate at Leipzig, but also from the 6 crowded years of events in which Hitler had consolidated his regime. He declared that Hitler was bent upon conquest of Europe, upon reviving the old pan-German scheme of conquest in which he intended to enslave 450,000,000 people, and thence to secure Nazi hegemony of the world.

Dr. Dodd has passed on. But a world in which every humanistic value we attach to life is vanishing with lightning-like rapidity is confronted with a fateful decision. What we do in the next few weeks may change the course of history. For tonight the chickens of world disorder which Senators Lodge, Borah, Knox, McCormick, Hiram Johnson, Jim Reed, and others helped hatch have come home to roost. And, true to form, the heirs of these men are stumping the country from coast to coast, echoing the ventriloquisms of the politicians of 1920. These orators say now, as they said then: "Stay home; lock yourselves behind Chinese walls; attend to your own business. If Europe means to destroy herself, nothing can be done about it." These men regard themselves as realistic, practical men. But they would commit this Nation to a last-ditch defensive fight, with our back to the wall, standing alone in a world of eager gangster nations, without reliable and powerful allies. One of these experts, a certain ex-colonel in the Air Corps Reserve, offers us the same advice he reportedly gave the British in 1938.

So far as one can learn from a careful analysis of all his speeches and acts, no word or deed has come from him that would infer that the Nazi system of mass terror, exploitation, and total war is not the "wave of the future."

Both Hitler and Lindbergh agree that no merger of industrial resources is big enough to thwart the Nazi march of conquest and there is nothing America can do to prevent them from taking over Europe and Africa. But on the same day that their statements were issued, 17 American specialists who have made a comprehensive study of the war united in a joint pronouncement that "factors of fundamental importance still operate in favor of Britain and her allies and there is no warrant for presupposing a German victory." Four of the seventeen are admirals in the United States Navy who have made a lifetime study of strategy. The important point, it appears, is that the Germans must beat Britain down this summer and we have the power to prevent this if we shake off our creeping paralysis and make an all-out effort. The moral factors—or the imponderables that Bismarck used to weigh and consider—are against the Nazis. Finally, even if it be true that Britain is to lose, it is imperative that any German victory be delayed as long and made as difficult as possible.

The logic of this last point seems impregnable. And we have the word of four Cabinet members, who of all the people in America should have more cold facts at their disposal than laymen or even some of the experts. In their recent speeches all agree that we are being encircled; that one cannot appease a rattlesnake—either you fight him or let him have his way. Those who accept the Lindbergh thesis believe that if we let the gangsters have the Old World we can retain the New, with our institutions remaining unimpaired.

If history teaches anything since Hitler annexed the Saar Basin in 1935, it is that he has fooled some of the statesmen and people by saying, "This is my last territorial demand," followed by the proffer of the bloody hand of friendship in some meaningless 25-year peace pact. Today we know that any land with rich natural resources lying around loose will be taken by the Axis if they get the chance. The trump card of the Nazis is that the democracies are doomed because no one of them will ever be able to pull together with others like a team until it is too late. A well-financed propaganda campaign in America exhibits all the devices of "softening up" the victim by paralyzing the nerve centers of resistance, playing upon every American prejudice—partisan, class, race, nationality, and creed. Their appeasements give aid and comfort to the thousands of Nazi termites who bore their way into the vital tissues of national defense.

The assertion that it takes two to make a fight is made nonsense by Hitler in the long list of conquered nations. And if the future seems darkened by the shadow of militarism and perpetual wars, yet a far worse future may easily befall us. "Appeasement and wishful thinking" are the words written on the doors of 15 nations who resisted with inadequate force or gave up without a struggle, with the resultant slavery, dismemberment, and expropriation.

We, like the British, can rise above our appeasers and native Fascists. Keeping the sea lanes open will go a long way. But, as I see it, this is not far enough really to finish the job. So let us be done with weasel words about our neutrality and aid short of war, and quit thinking that total victory can be won by caroling God Bless America.

In a grim hour on the eve of our Revolution Patrick Henry said: "They tells us, sir, that we are weak. * * * We are not weak if we make a proper use of those means which the God of Nature has placed in our power. * * * The battle is to the vigilant, the active, and the brave. * * * Gentlemen may cry 'Peace, peace,' but there is no peace. Our brethren are already in the field. Why stand we here idle?"

I say, America must fight.

What Is England Fighting For and Why Are We Aiding Great Britain?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

LETTER BY HON. RAYMOND S. McKEOUGH, OF ILLINOIS

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I include therein a letter written by my colleague the gentleman from Illinois, Representative RAYMOND S. MCKEOUGH, in response to an inquiry from one of his constituents who inquired "What is England fighting for and why are we aiding Great Britain?"

I consider his answer to his constituent one of the most intelligent—which, coming from him, naturally would be—and as most candid and enlightening.

I strongly recommend and urge every Member to read it.

The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 26, 1941.

DEAR MADAM: Replying to your letter of April 23, it is my conviction that England, in its resistance to Hitler, is fighting not only for her very life but is making a heroic contribution to the preservation of human liberty and the God-given rights that spring from it.

Our Government has solemnly declared, after full exercise of democratic processes by the action of the Congress, that it not only sympathizes with England's purpose, but has dedicated its vast power and influence to aid England to protect Christian civilization in resisting the atheistic culture and philosophy that stems from the ideologies of nazi-ism, fascism, and communism. This policy of our Government, obviously, imposes grave responsibilities. It is my earnest prayer, as I am sure it must be yours, that the President of the United States, who, under the Constitution, is the Commander in Chief of the Army and Navy, and all others in responsible positions in the Federal Government will, by the grace of God, with wisdom and courage, justly and duly discharge their heavy responsibilities, and thus protect all that we cherish as most sacred in life.

I, of course, am not unmindful that such conduct will impose great sacrifices on the part of our people, but every national emergency has called for such sacrifices. The present emergency is, without doubt, the most grave in our history, and may require larger sacrifices than were contributed by the generations who lived through former emergencies. It is my considered judgment that, no matter what sacrifice may be required to defeat the present threat to our security, and no matter how great, it will be insignificant to those that we will be compelled to make in the event the dictators of Europe and Asia are ultimately successful.

I have made reply to your communication because of my appreciation of your great concern. I should like to make individual reply to many other inquiries of similar nature which reach my office from residents of the district which it is my privilege, and accompanying responsibility, to represent in these serious times. That I am unable to do because of a lack of sufficient help. I trust you will make known my position to those to whom you refer in the last paragraph of your letter as being anxious to hear from me.

Yours very truly,

RAYMOND S. MCKEOUGH.

Gutzon Borglum's Last Writing

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

AN ARTICLE ON MOUNT RUSHMORE—SHRINE OF DEMOCRACY, WRITTEN FOR THE STATE TEACHERS' MAGAZINES

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on Mount Rushmore which was prepared especially for the use of the State Teachers magazines by the late Gutzon Borglum shortly before his death on March 6. This article has appeared in the South Dakota Education Association Journal and the Virginia Journal of Education and other State education journals. It is probably the last article the famous sculpter wrote.

The article follows:

MOUNT RUSHMORE—SHRINE OF DEMOCRACY

(By Gutzon Borglum)

(EDITOR'S NOTE.—This article was prepared especially for the use of the State teachers' magazines shortly before the death of the famous sculptor on March 6.)

In the Harney Range of South Dakota, an eastern outcropping of the Rocky Mountains, the Shrine of Democracy nears completion on Mount Rushmore as the manifestation of a group of ideas, not merely as the result of a flash or momentary impulse to carve a few colossal statues upon the face of a cliff.

The inspiration that developed into the creation of this gigantic work first came to the mind of Doane Robinson, the historian, of this great, picturesque, and turbulent West, whose life now spans close to a century. Robinson, pricked with a desire to immortalize the spirit that made America what it is, longed for the conversion of some of the Black Hills' great granite pinnacles into symbols and statues commemorating our greatness. In 1924, while taking part in the dedication of a memorial in one other Western State, he gave expression to an idea that finally, in its development, has grown to what we call the Shrine of American Democracy.

Any shrine of this sort must naturally contain the figures of Jefferson, the author of the Declaration of Independence, which is so fundamentally right that it has become the declaration of independence for all mankind and in its form has become the letter and the cornerstone of our freedom and that of more than 50 other nations; and Washington, the Father of his Country, who with his associates freed our forefathers and framed the Constitution—the ways and means by which the freedom declared by Jefferson could be lived and maintained.

In my desire to make the memorial and the history of this political record complete, and to include our day and life, I developed the drama and added to its design two other men: Abraham Lincoln, who played such a vital part in saving our great Republic; and Theodore Roosevelt, because of his making possible the completion of the Panama Canal. The Canal answered the longing of all Europe and the great interests in the eastern part of our country to find a short sea route to India. Also, as Mr. Coolidge said of Theodore Roosevelt, he was the only President who had the courage to tell growing big business: "Thus far you can go and no further for the safety of our Government."

Mount Rushmore is 500 feet above a natural parking place, 1,500 feet to the south, toward which the group faces. The stone, for all practical purposes we shall call it granite, is in excellent condition with very few interfering cracks. After removing about 20 feet of the surface all over the work, and, in seeking high relief at some points, cutting into the mountain to a depth of 90 feet, we found ourselves working in the very heart of granite untouched and unspoiled by 40,000,000 years of exposure.

The group faces south so directly that the sunrise touches the left of Washington's face. Both sides of the face are lighted some time during the day as the sun passes south and west over the head; and at the end of day it catches the last lingering light of the setting sun. The entire group is fortunately and splendidly lighted.

Jefferson recedes into the mountain a distance of about 40 feet and is just to the left and back of Washington. This forms a recess in the group across which Abraham Lincoln faces directly the two colonial Presidents. Between Lincoln and Jefferson you see the face of Theodore Roosevelt. I have arranged it so that he is turned slightly and is looking directly at Lincoln, whom he admired very much. The hand of Lincoln is shown drawing his coat about himself; and the hand of Jefferson, his left hand, is thrust forward as if he were about to call Washington's attention to something—possibly the present threat by the Old World against all democracy.

My own thought about the group, as I mentioned in my short speech to President Coolidge at the dedication in 1927, is that we are carving a memorial that will outlive our Government, although I clarified my statement by saying: "Not democracy, because the desire to be free and independent, and to be happy is older than democracy; it is born and is present in the consciousness of every living thing, and it will continue as long as life continues, as it will thrive and resist all interference with its happy existence."

Immediately back of the great group I am carving a hall, into which will be placed the records of our political, civic, and cultural growth—the development of electricity and steam, transportation, the telephone, the airplane, the radio, and the cinema. This great hall will be a hundred feet square and is located about two-thirds of the way up the mountain. The entrance to it is in a small gorge, cut by the ice aeons ago. A great wide granite stairway will lead to the hall, into the walls of which recesses in bronze and glass will be built to hold the records. There will also be found here statues in bronze of Benjamin Franklin, Patrick Henry, Thomas Paine, Andrew Jackson, and the great inventors, scholars, and other personages prominent in the service of American democracy and necessary to complete the record of the building of our great civilization.

The figures, that is the sculptural part of the memorial plan, are nearing completion and will be entirely finished during this year. They cost less than $700,000, and the tourist traffic they brought into South Dakota last

year exceeded in value 38 millions, according to various estimates, 80 percent of which is credited to Mount Rushmore.

The Black Hills are readily accessible by automobile, bus, and three railroads. The shrine itself is reached by two fine auto roads. One carries the great southeast traffic from Hot Springs and Custer over the beautiful, inimitable Iron Mountain road; the other, a wide and splendidly constructed road built by the State under Governor BULOW, comes from Rapid City.

There is no fee of any kind charged those visiting this memorial. I asked that of the Congress that created it; and it is the hope that when completed it will be protected as a shrine, as Franklin Roosevelt so dedicated it, somewhat religious in character and not cheapened by concessions or other commercial agencies that abuse and destroy the sanctity and beauty of nearly all our places of interest.

Tax on Carbonated Beverages

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

EDITORIAL FROM THE JOHNSON CITY (TENN.) PRESS

Mr. FLANNAGAN. Mr. Speaker, I ask permission to extend my remarks in the RECORD and to include therein a short editorial recently appearing in the Johnson City Press of Johnson City, Tenn., entitled "Tax on Carbonated Beverages Would Work Hardship." I feel that the Ways and Means Committee in working out the tax bill will give every consideration to the reasons set forth in this editorial as to why it would be unwise to place a 20-percent tax on soft drinks.

[From the Johnson City (Tenn.) Press]

TAX ON CARBONATED BEVERAGES WOULD WORK HARDSHIP

The United States' gigantic national-defense program obviously is going to cost a lot of money, and the billions of dollars it will require will come out of the pockets of citizens of all ages and social status. If the money is spent wisely and attains the desired results, not many men and women are likely to begrudge the expenditure.

Nevertheless, there are right and wrong ways of going about everything, and some of the Treasury Department's proposals for raising $3,600,000,000 for defense use seem injudicious.

Take, as a good example, the proposal that a levy of "1 cent per bottle and equivalents" be placed on all soft drinks. The Treasury estimates that this levy, which in effect would be a 20-percent tax on the soft-drink industry, would produce $132,500,000.

We shall not dispute a Treasury estimate, although the experts who make them have been known to fall woefully wide of the mark at times, but we do believe there is a strong likelihood that this total arrived at by the Government mathematicians is considerably too large. If the general public should be asked to pay 6 cents instead of 5 cents for a soft drink, the volume of sales would be reduced. The experience of such States as South Carolina and Kentucky with State taxes on such items has proved that.

This is particularly true because an increasingly large percentage of drinks are sold through automatic vending machines, which are standardized to operate after a 5-cent piece has been inserted. Addition of another cent to the price would make it impossible to continue sales by vendors, unless a new coin were devised that would work in the machines. This, of course, would make it necessary to spend a huge sum of money to adapt machines now in use to the new coin.

Another important consideration is the fact that if such a tax is instituted, 80 percent of the amount obtained will be paid by children, the working class and soldiers in camp. Carbonated beverages have become a necessity to millions of working people and children, who depend on them for a part of their daily nourishment. The drinks contain large percentages of sugar and other body-building materials, and have food value just as has candy—upon which, apparently, the Treasury does not mean to impose a tax.

It certainly appears only fair that if "soft drinks" are to stand a 20-percent tax, candy and many other articles which are no more necessities than carbonated beverages should also be taxed. No one doubts that the average soft drink maker and seller is willing to pay his part of the national-defense program, but there is reasonable objection on his part to segregating his own particular food product for taxation purposes.

Remember, only a fraction of a cent profit is made per bottle by the manufacturer of the average soft drink. Absorption of the 1-cent tax would mean a loss to the maker. Perforce he will pass the increase along to those millions of workers, children, and soldiers.

The truth is, the makers of carbonated beverages appear to be confronted by a difficult future. A proposed 1-cent increase in the tax on sugar will cost the industry several million dollars annually, and other proposed taxes will add to the cost of gasoline, fuel oil, automotive equipment, checks, tires and tubes, telephone, telegraph, transportation, refrigerators, insurance, light bulbs, coin-operated devices, and capital stock, all of which add to the overhead of beverage manufacture and distribution.

Obviously, the Treasury Department would do well to think the matter over carefully before it imposes a tax that will work a hardship on so many millions of people who never have too much money to spend.

Our American Citizenship and Governmental Faults

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

EDITORIAL FROM THE WORCESTER (MASS.) TELEGRAM-EVENING GAZETTE

Mr. HOLMES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester (Mass.) Telegram-Evening Gazette of May 18, 1941:

[From the Worcester (Mass.) Telegram-Evening Gazette of May 18, 1941]

OUR AMERICAN CITIZENSHIP AND GOVERNMENTAL FAULTS

In his proclamation designating this Sunday as I Am An American Day, President Roosevelt called upon "all Federal, State, and local officials, and all patriotic, civil, and educational organizations to join in exercises calculated to impress upon all our citizens, both native-born and naturalized, the special significance of citizenship in this Nation."

Perhaps at no time since the birth of our Republic has there ever been a greater need of a better understanding of the "special signifinance of citizenship in this Nation." That means that we require not only a fuller appreciation of the advantages in American citizenship and a firmer loyalty to the American form of government but also a readier willingness to confess faults in American institutions and a more persistent determination to end those faults.

We cannot, of course, expect perfection. Since government must be human, we cannot hope that government will be superhuman; that government will ever be above human frailties; that government will ever be able to advance further and higher than human nature will permit. We can, however, hope that government more and more will represent, reflect, and utilize the best in human nature. That is the goal of good citizenship.

The framers of our National Constitution understood human nature. They realized man's conflicting desires and man's tendency to hold his own purposes and his own ideas in high esteem. So they created a government of checks and balances, in which the power of one branch would act as a check and a balance against the power of another branch; in which any excessive ambition in one official or in one group of officials would be curbed by another official or by another group of officials. In addition, article X of the Bill of Rights, adopted soon after the Constitution itself had been ratified, declares that the "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." That meant that the Federal Government as a whole would face checks and balances in the power of the separate States and of the people of all the States.

It is customary to express admiration whenever the balance between the Federal Government, on the one hand, and the State governments, on the other hand, is discussed. Yet in some respects this balance has created difficulties. In some respects it has made the task of government harder. The same can be said about the self-government of cities and towns within the States. In the relationship between the Government at Washington and the governments in the capitals of the 48 States of the Union, and in the relationship between the State governments and many cities and towns, there are the seeds of perennial controversy.

We need a strong Central Government; we need free State governments; and we need home rule for cities and towns. Those are not necessarily conflicting needs. But those needs do involve conflicting purposes and conflicting desires on many occasions, and those needs cannot be met without a far more intensive study of them and a far more intensive effort to meet them than we have yet seen.

The struggle for power and advantage between the different units of Government produces confusion and waste, and imposes needless burdens upon the individual citizens. Taxation in many forms, in which Federal and State and local governments compete, is only one example. And the loss of time and of energy and of national efficiency resulting from the endless quarrels regarding the rights

and duties and proper functions of our various units of Government cannot be calculated. But inevitably it is tremendous. For in addition to the task of making adequate laws, we Americans are engaged in a constant conflict as to where and by whom the laws ought to be made.

To cite that fact is not necessarily to suggest that any units of government should be abolished. It is, however, to suggest that unless we confess the folly of perpetual debate over the Federal-State-municipal interrelationship, unless we fully recognize the confusion and make a genuine effort to diminish it, then our American citizenship may be in danger of losing some of its special significance.

Disputes regarding the relationship between our units of government are mainly nonpartisan, so far as the long view is concerned. That is, neither the Democratic Party nor the Republican Party has an unbroken record of wholehearted support of any particular principle or system or purpose. Party government, moreover, despite its many advantages and its many achievements, has not succeeded in eliminating many needless complications in the general governmental task.

That may indicate that party government itself, as well as the framework of government, may be in need of radical changes. Our system of electing officials, our political campaigns, might need some revision. Walter Bagehot, famous English economist, essayist, and journalist, who lived from 1826 to 1877, said: "One of the greatest pains to human nature is the pain of a new idea."

It might be added that the pain is particularly acute when the new idea arrives soon after a previous new idea. A pioneer or an inventor in any field—mechanical or commercial or political—usually likes to see his own new idea remain new as the years pass.

Americans have always thought of their form of government as new because it departed from the past in many ways. Yet in these fast-moving days, is it not possible that some new things may be needed in our government, in various units of government—Federal, State, and local? Can we be sure that our governmental machinery is really adequate? Can we not make improvements without desertion of fundamentals, without disregard of sound and time-tried principles and methods? Good citizenship requires a thorough consideration of those and other questions. I Am An American Day should call attention to the shortcomings of our democracy as well as to its virtues.

The Hoover Food Plan

EXTENSION OF REMARKS

OF

HON. LAURENCE F. ARNOLD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE FROM THE BALTIMORE EVENING SUN

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Sun of Baltimore of May 17, 1941:

[From the Baltimore Evening Sun of May 17, 1941]

POLL OF REPUBLICANS HITS HOOVER FOOD PLAN—SLIGHT MAJORITY AGAINST A. E. F. TO ENGLAND. QUESTIONS ON FOREIGN POLICY SENT TO RANK AND FILE THROUGHOUT NATION

Sentiment among Republicans in all sections of the Nation is opposed to former President Herbert Hoover on his proposal to send food to countries occupied by German armies, according to a poll being conducted by the Young Republican National Federation, the State branch of the organization was informed today.

The notification was included in results reported from a poll of "rank and file" Republicans on questions dealing with United States foreign policy. The poll is being conducted from the national headquarters in Chicago and the findings distributed to the State organizations.

NINE THOUSAND TWO HUNDRED AND FIVE QUESTIONNAIRES

Questionnaires have gone out to 9,205 Republicans making up a cross section of the party throughout the Nation, it was announced. These were divided among older party members, youthful Republicans, and women voters.

Findings on returns to date were announced as:

1. Most Republicans believe Britain will eventually win the war (71 percent Britain; 4 percent Germany; 25 percent stalemate).

A. E. F. OPPOSED

2. By a slight majority, weighed by Midwest isolationist sentiment, Republicans are opposed to sending Army, Navy, or air force to help England, even if it becomes apparent that Great Britain will be defeated without such help (52 percent opposed, 48 percent for).

3. A majority believes the United States would inevitably be involved in war with the totalitarian powers if Germany invaded and defeated England (54 percent yes, 46 percent no).

"STEPS TOWARD WAR" OPPOSED

4. The rank and file believes Republican leaders should oppose "steps toward war" (60 percent to oppose, 40 percent to follow administration in all matters of foreign policy).

5. All sections—East, South, Midwest, and West—oppose the Hoover plan for supplying food to occupied countries despite the British blockade (56 percent oppose, 44 percent favor).

6. All sections believe the United States should take part in peace conferences upon the conclusion of the war (65 percent yes, 35 percent no).

AGAINST "UNION NOW"

7. A similar majority now oppose "union now" or "federal union" among the United States, England, Ireland, Canada, Australia, etc. (69 percent no, 31 percent yes).

Although other polls of the Nation have indicated that the South is most strongly in favor of immediate and maximum aid to Britain, among Republicans this sentiment was found heaviest in the East—probably because of the negligible number of Republicans in the Southern States.

In the belief that Britain will be the eventual victor, for instance, the eastern Republicans voted 77 percent, the West 72 percent, the South 71 percent, and the Midwest 68 percent.

MIDWEST DISSENTS FURTHER

In favor of sending armed forces abroad, the eastern G. O. P. registered 55 percent, the West 52 percent, and the South 54 percent. The Midwest opposed by a majority of 61 percent.

The Midwest dissented again from the other sections on the query whether the United States would be involved in war following an Axis victory, for while 60 percent of the Republicans in other sections believed that to be the case, only 46 percent in the Middle West expressed that view.

Pegler in the Times

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

EDITORIAL FROM THE RHODE ISLAND FREE PRESS

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rhode Island Free Press of May 16, 1941:

[From the Rhode Island Free Press]

PEGLER IN THE TIMES

Westbrook Pegler, using the Pawtucket Times as his journalistic mouthpiece in Rhode Island, has penned a column deciding that the time has come to vomit his spleen against Senators GEORGE W. NORRIS, of Nebraska, ROBERT F. WAGNER, of New York, and ROBERT M. LA FOLLETTE, of Wisconsin.

The day after Pegler was awarded recognition for exposing the criminal record of a labor leader—which sent him off on the tangent of condemning the entire labor law—F. P. A., veteran New York columnist, very cunningly introduced in his column the observation that Pegler would now seek to win the Pulitzer Prize in 1942 by leading a crusade against the Wagner Act. It seems F. P. A. has been uncanny.

Senators NORRIS, WAGNER, and LA FOLLETTE led the fight for the Wagner Act. All three are great liberals, in their own right, without benefit of a controlled press—of benefit to them. Pegler is now in a definite scheme to smear these three Senators. He dismisses Senator NORRIS without recognizing that the Nebraska liberal vaulted over the political machines of both parties, in his own State, to be elected by the rank and file of the independent voters. And Senator LA FOLLETTE has done the same thing.

Pegler develops the point that Senator NORRIS must be for crooked elections because he attended the unveiling of the statue of Huey Pierce Long in the Hall of Statues at the Capitol. Pegler ought to read about the crooked elections financed and underwritten by the power trust in Nebraska in trying to defeat Senator NORRIS. But if we follow Pegler's argument—that NORRIS must be for crooked elections because he watched Huey Long's statue being unveiled—then we suppose by the same logic that Pegler is in favor of continuing the 10 percent pay cut on unorganized employees of the Pawtucket Times, since he writes for that paper and allows his column to appear therein every day. And the 10 percent pay cut was made late in the depression, and was not restored when the price of the paper was boosted 50 percent. Of course, the organized employees do not have to suffer such arbitrary handling—and Pegler is against the influence which comes from unionization.

Since Pegler and the press which sponsored him have had their advantage in spreading propaganda against labor by seeking to pin the blame on the workers for strikes in defense industries, the Rhode Island Free Press, obtaining figures from official Government sources, not only exposes this press-columnist conspiracy, but offers the facts:

From the start of the defense program through April 30—the period for which the latest compilation was made—75 percent of all time lost due to strikes was caused by the resistance to unionism of five big corporations—Ford, Allis-Chalmers, International Harvester, Bethlehem Steel, and Youngstown Sheet & Tube.

In that entire time, man-days lost due to disputes in defense industries numbered 2,322,901. Strikes at the five named companies accounted for 1,725,000 of the man-day losses.

These giant corporations have been fighting unions throughout their history. Had they obeyed the laws of the land and entered into collective-bargaining agreements with the unions representing their workers, three-fourths of the defense strikes would not have occurred. That's what the Government data shows, in black and white.

Clearly, then, if labor's calumniators had been really interested in averting strikes, they could have done so by cracking down on the five corporations and compelling them to obey the Nation's labor laws.

The Government figures, tabulated by defense officials, are also very illuminating on many other points. They disclose, for example, that only 2 percent of the strikes arose out of demands for the closed shop.

And yet many of the bourbons in Congress have tried to create the impression that the closed-shop issue has been the cause of most strikes; and Congressman CARL VINSON, of Georgia, has fathered a bill to prohibit new closed-shop contracts, all in the guise of preventing labor disputes.

Jurisdictional disputes, about which the same Tories have raised so terrific a hullabaloo, also accounted for a mere 2 percent of the time lost in walk-outs, and at this writing not a single jurisdictional controversy is holding up defense work anywhere.

Strikes to bring up low-wage scales caused only 4 percent of the idleness; 8 percent was due to demands for collective-bargaining agreements from antiunion firms, other than the five mentioned above, and the remaining 9 percent to a variety of reasons.

These figures can easily be obtained by Pegler and the Pawtucket Times, if they desire them, from the agencies that are collecting strike data.

They prove, once and for all time, that the fundamental cause of the overwhelming majority of strikes is the refusal of America's titans of industry to sit down at the same table with representatives of labor and negotiate with them in good faith.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

EDITORIAL FROM THE PHILADELPHIA DISPATCH

Mr. RUTHERFORD. Mr. Speaker, the great majority of the people of Pennsylvania are opposed to the building of the St. Lawrence seaway as advocated by the President. Why the President should be so set upon this proposition at this time is hard to understand. An editorial in the Philadelphia Dispatch of May 18, 1941, says that it is an economic monstrosity. It is that, and more. The editorial is as follows:

[From the Philadelphia Dispatch]

ECONOMIC MONSTROSITY

Construction of the St. Lawrence seaway would dislocate and disorganize American business on a wide front. That is the gist of an important statement recently issued by the West Virginia Chamber of Commerce.

From the earliest days of this country's industrial development, the chamber explains, the ever-increasing flow of traffic from the Great Lakes region to the Atlantic seaboard has followed the pattern fixed in the most economic development of the most populous and industrially important section of the United States. It then says: "The Great Lakes-Atlantic coast railroad system * * * is the lifeline of a closely related and far-flung economy. This important system is magnificently adequate, and it is not an unimportant factor that central Canada's immense shipments of grain and other products which now help support it would be irrevocably lost if the St. Lawrence waterway should be constructed." The essence of the proposal, it adds, is that "we shall now provide a tax-subsidized substitute for this great network of railroads and highways, thereby dealing a mortal blow not only to the transportation system but to the economy which has grown up around it."

There is no lack of adequate and cheap transport in the St. Lawrence region—even as there is no lack of electric power. In essence, the St. Lawrence proposal amounts to spending hundreds of millions of the taxpayers' money to create tax-free, tax-subsidized transport and power services which are already provided by privately financed, heavily taxed, publicly regulated private industry. At this time, when the full effort of private enterprise in all its branches is needed to complete the defense program, and when every dollar of Government money must be applied to necessary purposes, the St. Lawrence plan is best described as an economic monstrosity.

Value of Farms in New York State

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, including permission to include an article published in the New York Herald Tribune dated May 18, 1941, I wish to make the observation that the New Deal policies have diminished the farms, reduced the value of farm machinery and farm buildings, cut the production of some farm products by approximately 50 percent in the State of New York. The figures indicate that the New Deal blitzkrieg has had a devastating effect on the farmers of the Empire State.

The article follows:

[From the New York Herald Tribune]

VALUE OF FARMS IN STATE CUT BY $368,830,000—CENSUS SHOWS DECLINE OVER 10 YEARS HAS REDUCED THEIR NUMBER BY 6,568

WASHINGTON, May 17.—The value of all farms in New York State, including buildings, declined more than $368,830,000 in the 1930 to 1940 period, according to the decennial census of the Department of Commerce. Between 1935 and 1940 the drop in values totaled in excess of $98,000,000.

In a review of agriculture for the State the Department discloses that farm lands and buildings were valued at $947,073,893 in 1940, compared with $1,045,391,981 5 years earlier and $1,315,904,741 at the end of 1930.

The decennial census places the value of farm implements and machinery at $138,341,935 at the end of 1940, against $173,606,369 in 1930, a drop of more than $35,250,000. No statistics are given for 1935.

SIXTY-TWO THOUSAND THREE HUNDRED AND FIFTY-NINE FEWER FARMS

There were 153,238 farms in operation in the State in 1940, against 177,025 in 1935; 159,806 in 1930; 188,754 in 1925; 193,195 in 1920, and 215,597 in 1910. Between 1910 and 1940 the number declined 62,359.

There were 2,390,508 persons tenanting and operating farms in the State in 1940. In 1935 the farm population was 2,895,685; in 1930, 2,781,077; in 1925, 3,314,544; and in 1910 there were 5,467,051.

Thus between 1910 and 1940 the farm population declined more than half. The shift to industrial centers, however, has not been so large as that experienced by other States with a predominantly agricultural economy. The census does not show where this population migrated.

The average size of farms in the State has not changed materially in the last 30 years. The average was 112.1 acres in 1940, against 102.2 in 1910. The peak average was in 1930, at 112.6 acres. A break-down by size of farms in operation shows that those of 100 to 174 acres predominated with 42,567. Next in importance were farms of 50 to 99 acres—36,874.

There were only 11 farms of 5,000 to 9,999 acres and only one of 10,000 acres and over at the end of 1940 and 1935. No statistics are shown for the other comparative census periods.

LARGE FARM PRODUCTION

New York, known largely as an industrial State, is also a large producer of milk, butter, potatoes, and other farm commodities. The following table, for the period 1909 to 1939, will give an idea of the output of important commodities:

	1939 [1]	1909 [1]
Milk.....gallons..	838,415,000	783,479,000
Butter.....pounds..	4,205,000	12,630,000
Wool.....do....	1,183,000	4,235,000
Honey.....do....	3,193,000	3,191,000
Wheat.....bushels..	6,458,000	6,613,000
Oats.....do....	19,490,000	34,795,000
Potatoes.....do....	24,924,000	48,597,000
Tobacco.....pounds..	1,398,000	5,345,000

[1] All statistics are for commodities produced except those for butter, which represent the number of pounds sold.

New York farmers reported to census officials that production of eggs in 1939 aggregated 97,212,000 dozen—a slight increase over 1935. In 1909, 71,191,000 dozen were produced.

In 1939 there were 1,927,000 cattle on New York farms, of which 1,361,000 were cows and heifers kept for milk production, and on 106,000 farms there were 1,190,000 chickens, compared with 136,000 farms reporting a total of 12,648,000 chickens in 1934.

World Trade

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

STATEMENT BY GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, Mr. George N. Peek was special adviser to the President on foreign trade and president of the Export-Import Bank through 1934 and 1935. He was the first Administrator of the Agricultural Adjustment Act in 1933. He resigned from the Administration at the end of 1935 because of irreconcilable differences in point of view on the farm and foreign trade policies of the administration.

For the past 20 years he has given a large part of his time to a study of farm and foreign trade matters. Prior to that time he was in charge of trade—foreign and domestic—for one of our largest corporations.

He was a member of the War Industries Board in 1918.

Recently, Mr. Peek, at the request of the America First Committee, prepared an answer to the claims of the war interventionists that we cannot live in the same world economically with Hitler in the event of an Axis victory. He sent his answer to the committee on May 14, 1941.

In the light of the President's speech opening National Foreign Trade Week and particularly in view of the speech of Secretary of State Hull last evening, the printing of Mr. Peek's remarks in the CONGRESSIONAL RECORD at this time is especially timely. It is generally agreed that Mr. Peek is one of America's outstanding authorities on foreign and domestic commerce, particularly in reference to the exchange of agricultural products.

I am today in receipt of the following telegram from Mr. Peek:

If the President's statement on the 17th and Mr. Hull's five points yesterday mean anything at all they mean world free trade with the United States acting as underwriter and director general. Such fanaticism must not be permitted to drag us into war without an expression from the people, even if this means delay or "frustration" of the "aid Britain policy."

The answer prepared by Mr. Peek follows:

Opening. Can Hitler impoverish America? Can Hitler cause an economic collapse in this country by stifling our foreign trade, cutting off our markets, and denying us access to the vital materials we need? Can his slave labor, his barter system, his goldless economy invade us where his panzer divisions cannot? Assertions of this kind are made by the war interventionists, including a recent statement by Mr. Willkie.

Answer. No. Hitler cannot impoverish America by stifling our foreign trade, by cutting off either our markets or our sources of supply of vital materials. To assume that he can is a counsel of unreasoning defeatism. But America can impoverish herself by spending her substance on foreign wars.

One of the presumably convincing arguments put forth by many well-meaning people, as well as by the interventionists, is that although a victorious Germany might find it impossible to invade this country, she could destroy our world trade and force us to trade according to her wishes and on her own terms.

Now comes Mr. Willkie citing this argument as part of the interventionist campaign to take this country into war. He does not advance a single reason why his views should be taken seriously on account of any special knowledge or experience in the field of trade—foreign or domestic. He advances no new points. Rather, he seems to appear as just another advocate, this time on economic grounds, of the interventionists' campaign—a campaign to involve our country in a foreign war. In this campaign, too, his assertions may be regarded as "campaign oratory."

The arguments of one, however, are the arguments of all. They stem from the self-interests of a few. They are built on a false theory of trade. Therefore their case will not stand up before a jury of American informed opinion.

Question 1. Your statement may be perfectly true, but I think it must be substantiated. You say that the arguments of the war interventionists are based on a false theory of trade. Now, if Hitler were to control a large part of the rest of the world, would he not be in a position to dictate terms to us? Why is that a false theory of trade?

Answer. My reply to their argument has been that we hold the answer largely in our own hands. The same argument could be advanced with respect to Great Britain or other nations. My reply would be the same. Competition is the life of trade and is always a threat in private business, no matter from whom it comes. So it is with nations.

Political control is one thing—economic necessity quite another. Now, let us get this straight. There is no difference in principle between foreign and domestic trade, except as restrictions have been imposed upon the entry of goods and the transfer of funds between countries. The war interventionists' theory is that one party to a transaction could dictate all the terms and conditions of the trade between two or more parties. How false Every man, woman, and child knows better if he will think but for a moment. It takes two parties to complete a trade. The necessities and the desires of each are basic. To assume that one may dictate all the terms and conditions is assuming something which is not so. Therefore their case rests on a false premise and should be dismissed. As to Hitler's ability to dictate terms of trade to us in the event of a victory—no; that is where economic necessity comes into play. For example:

In 1933 and 1934 we demonstrated that we could trade with other nations to our mutual advantage. Indeed, we made some desirable deals—mutually agreeable ones with France, Spain, and Italy—but the administration refused to continue to trade. The reason given was that to do so would interfere with our trade-agreement policy, which was one of international altruism toward every country in the world save one. The real reason, however, was more obscure. In the case of Germany, notwithstanding that her two great necessities were understood to be easier access to raw materials and larger markets for her manufactured products, we denied her both, beginning as far back as 1934. The reasons were social and political. Vice President Wallace now says (address, Foreign Policy Association, April 8, 1941), "the next peace must give the * * * aggressor nations the opportunity to buy raw materials and sell manufactured goods without discrimination." If the President, Mr. Hull, Mr. Wallace, and the other New Dealers had recognized Germany's legitimate necessities in 1934 and since, instead of declining to trade with her, they might have made a real contribution toward world peace and might have checked the rapid rise of Nazi-ism and thus avoided the danger of American participation in this war.

Desirable opportunities to trade were rejected, also, for one reason or another, with England, Japan, Italy, and other nations. In 1939 we revised this position somewhat when we made an agreement with England to exchange cotton for rubber. No change in basic policy, however, is indicated by this isolated incident, as the President made clear in his message to Congress last January.

Question 2. Accepting your statement that it takes two parties to make a trade, what advantages would we have to use against Germany's increased bargaining power? You have shown that grave errors were made and it would have been possible to make desirable trades. But under German control of Europe and other areas won't the conditions be so different that former rules will not apply?

Answer. First and foremost in importance is our great market. We have the greatest consuming power in the world. Our purchases from foreign countries support a large part of the economy of many of them. For example:

Latin America produces 90 percent of all the coffee—we consume half of it. Europe, too, depends upon Latin America for her supply—about the same quantity as ours—although she has four times our population.

The Malay States, the Dutch East Indies, and small neighboring countries produce nearly 95 percent of the rubber and, including China, 60 percent of the tin. We use half of the rubber and 40 percent of the world's production of tin.

Japan produces nearly 90 percent of the silk; we buy 90 percent of her exports.

These are examples of the dependency of foreign nations upon our market. Others may be cited—that is, jute from India, diamonds and gold from South Africa, tea from southeastern Asia, etc.

The economy of such nations does not shift with the flag of the overlord. It relies upon our markets. It does not change with superpolitical control.

A careful canvass of the world's mineral production discloses that the non-American nations of the world are more dependent upon the Western Hemisphere than it is dependent upon them.

As an example of the dependency of other countries upon our markets, let us consider a few items:

In the case of rubber, in 1929 we imported 528,602 tons at an average price of 20.5 cents per pound; we paid foreign countries for it $247,420,000. By 1932 our imports had dropped to 393,731 tons and the price to 3.4 cents; we paid $34,273,000. By 1937 we had increased our imports to 592,528 tons, and the price had risen to 19.4 cents—a total of $252,859,000. The last 2 years show a greatly increased tonnage on account of our policy of storing up rubber.

In the case of tin the story is similar. In 1929 we imported 195,165,000 pounds at 45.19 cents, or $91,839,000. In 1932 we imported 77,995,000 pounds at 22.01 cents, or $16,474,000. In 1937 our imports amounted to 197,377,000 pounds at 54.24 cents, or $104,285,000.

This merely shows the necessity and desirability of an active American market for the products of foreign lands.

Then comes the question of technological development and the use of substitutes. Great progress has been made in this field in recent years.

The development of synthetic rubber has progressed to a point where we may say that, if necessary, we are no longer dependent upon the Eastern Hemisphere. Within a very few years we could produce our own rubber, as Germany has done. A number of our most important concerns are active in this field.

The same thing may be said of silk. Witness the great development of rayon and now nylon.

We are now preparing to smelt a considerable portion of our tin requirements in the United States from ore coming from Latin America. In addition, important substitutes have been developed from plastics and other materials, replacing tin.

This hemisphere can supply our manganese and potash—the former through the development of machinery and processes of refining low-grade ores here and in Cuba, and the latter through the development of our own mines.

These are examples only. There is great progress in other fields.

Trade is a fleeting thing. Conditions and methods change, demand and sources of supply with them. For example, we have seen England abandon the practice of a century as the leading advocate of free trade and the gold standard, and for a decade follow a new policy of tariffs, trade agreements between nations, and managed currency. I do not say that this is or is not the best way to conduct trade between nations, but the point is that that is the way world trade has been trending for more than a decade. We are the only important nation attempting to ignore this fact.

My view is that we must recognize the fact that we cannot prescribe the rules and regulations for all the world. Rather, if we are going to engage in trade with other nations, we should use our strategic advantages to negotiate country by country in our own interest.

We should, of course, keep ourselves in a position to join with other nations in improving methods of trading if and when the times comes that the rest of the world is ready to consider a change. But, in the meantime, we should refrain from playing Santa Claus and from opening our markets recklessly to nearly all the world and so exposing our national economy to influences from abroad over which we have no control. Our need is for more defense of our national economy—not less.

Question 3. If Germany, producing with slave labor, can offer better prices to Latin America, how can we compete?

Answer. That is a trick question. The term "Latin America" covers many countries and a wide diversity of economic interests. It must be remembered that Germany, and England, too, had substantial trade with South America before World War No. 1. There is nothing new about competition with them, except in degree. There are many considerations involved in trade besides price. Design and adaptability of products to do the work desired; terms, delivery dates; personal equation between buyer and seller; and numerous other things. Frequently we hear the phrase, "Quality is remembered long after price is forgotten." If price were the sole measuring stick, the manufacturer with the lowest price would be selling all the goods, be they automobiles or what. Competition would die. Monopoly would succeed it, and higher prices might then result.

The answer lies in mutuality of interest between nations and regional economic areas, all things considered. Under these circumstances there is only one intelligent procedure for us to follow, and that is to recognize the conditions under which trade is now conducted between nations, and then, so long as governments control the foreign trade of their nationals, negotiate country by country for the terms and conditions under which goods may be exchanged satisfactorily. Each country must recognize frankly the needs of the other.

Other things being equal, free labor can out-produce slave labor. We made our greatest progress after we abolished slavery—slave labor produces little buying power. American wage levels support our higher American standards of living. They protect the American workers on our farms and in our factories against the lower standards not only of the forced labor of the Axis Powers and Russia but of the low-paid labor of the Argentine and China and the cheaper labor everywhere outside the United States of America. Our wage levels must be insulated against the competition of a world turned upside down. We must stop letting foreign prices determine our domestic prices.

Question 4. What do you mean by foreign prices determining domestic prices?

Answer. World price very largely determines the domestic price of every crop of which we export a surplus. This price applies to the whole of the crop, whether consumed at home or exported, however much this burden is lessened by Government handouts. Industrial tariffs can and do protect prices of articles for which crop is exchanged. The fair exchange value of the crop is thus reduced in proportion to the protection afforded industry. Therefore the protective principle usually operates for the benefit of industry and to the detriment of agriculture.

This problem is as old as our history. Alexander Hamilton recognized it, and in his famous Report on Manufactures, written in 1790, after urging a policy of tariff protection for industry, observed that the day might come when it would be necessary to give agriculture an equivalent. He proposed at some future time to offset, by subsidy or otherwise, the farmer's disadvantage of having to buy in a protected market while having to sell in an unprotected world market at world prices.

Notwithstanding the millions and billions that have been appropriated for agriculture in the last few years, the basic fault remains—while we pay our farmers not to produce, we encourage foreign farmers to produce, not only for foreign markets, which we formerly supplied, but for our markets, by making it easier to import. Such a policy cannot be permanent. Its duration will be immeasurably shortened by the vast expenditures we must make for our national-defense program.

Question 5. Suppose we choose to follow a policy of complete isolation?

Answer: I have never heard anyone seriously urge such a course. However, we are in a better position to do so than any other nation. We are more nearly self-contained. More than 95 percent of our trade is domestic and less than 5-percent foreign. An increase of 5 percent in our domestic trade amounts to more dollars than an increase of 100 percent in our foreign trade. A few hardships might be imposed by trying to make ourselves entirely self-sufficient, but they would be nothing compared to the hardships which we would have to endure through participation in a foreign war. If regimentation is to result, as the war interventionists say it will, my answer is that I would prefer to regiment the 5 percent of our economy which is represented by our foreign trade than the 95 percent which is devoted to our domestic needs.

Question 6: In the early part of this interview you referred to the arguments of the war interventionists on the subject of foreign trade as stemming from the self-interests of a few. To whom did you refer?

Answer: Generally, I referred to the 18 percent shown by the Gallup Poll of the people constituting the interventionists. More specifically, I referred to those who profit most from international trade—the international bankers, ocean transportation companies, marine insurance companies, exporters and importers, etc.—as distinguished from the business concerns who do some foreign business incidental to their domestic business but whose business is primarily domestic. All of the latter group, if compelled to choose between a prosperous American market and one periodically shot to pieces by foreign events, in times of peace and war alike, as ours has been, would choose the American market.

As to individuals, I do not desire to deal with personalities, but one case stands out. Many Americans will recall that an international banker of New York wrote two books in 1936 opposing President Roosevelt's reelection. He supported Governor Landon, but after the Governor made his St. Paul speech, in which he took a stand for protection of the American market and for real Yankee trading, this banker wrote a letter to Secretary Hull saying that in view of Governor Landon's position, he would have to support the Democratic ticket. He is now one of our leading interventionists.

Question 7. Can you sum up in a few words what you think our policy should be and what the question boils down to?

Answer. I think that all of our foreign policies—political and economic—should be related definitely to our American needs and ideals, with the objective of protecting and perpetuating the form of government and the economic policies which have made our country great. Our aim should be to make possible to all Americans the fullest benefits of our form of government as granted by our Constitution and the Bill of Rights. The first requisite to this aim is knowledge based on reliable and comprehensive information, so that we may know what the problems are and consider them fairly. The second is a realization of the principle that foreign policies, whether political or economic, must not be permitted to destroy or impair either our form of government or our standards of living.

The question boils down to this, Shall we take advantage of our position of geographic and economic security and contribute to world peace and prosperity by developing our own country and by attending to our own affairs, or shall we toss our Nation into a common pool in the management of which ours will be only one voice and that not the controlling one? Shall we dilute our Nation's strength with the world's weakness?

Income Certificate Plan

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RADIO ADDRESS BY HON. HAMPTON P. FULMER, OF SOUTH CAROLINA

Mr. FULMER. Mr. Speaker, under leave to extend my remarks I am inserting herewith a short address delivered by me over the Columbia Broadcasting System Saturday, May 17, 1941, in reference to various bills pending before the Agricultural committee, including my income-certificate proposal:

I deeply appreciate the fact that at this moment the great thought in the minds of the President, the Members of Congress, and the American people concerns the ruthless and destructive war that is now raging in Europe, and the building of our national-defense program as speedily and efficiently as possible.

However, I want to call to the attention of the administration, the Congress, and the American people that we cannot have a well-balanced and successful national-defense

program unless we have a well-balanced and prosperous agriculture. In other words, a successful agriculture is a major part of any successful national-defense program.

We passed a Senate bill this week, after substituting the provisions contained in House Joint Resolution 149 providing loans on cotton, wheat, corn, tobacco, and rice equal to 75 percent of parity. This bill was sent to conference and the conferees agreed upon a loan amounting to 85 percent of parity. These loans will peg the price of cotton at 13½ cents per pound, and wheat at 96 cents per bushel. Farmers will also receive, in addition to these prices or loan values, their cash parity and soil-conservation payments.

This bill was passed to take care of this year's crop pending the passage of a real major farm bill that will definitely give to farmers a 100-percent parity price.

During the past 3 weeks, the Agriculture Committee of the House, of which I am chairman, has been holding general hearings on various bills, including my bill known as the income-certificate bill, proposing to put farmers on a parity with other groups without having to "tap" the Treasury of the United States every year for the purpose of paying a subsidy to the farmer. These bills include actual price-fixing, cost-of-production, and high-loan bills.

When the Farm Board was created and the high-loan program placed in operation under the Hoover administration, I stated on the floor of the House that it would be just like putting that much money in a rat hole unless we were able to absolutely control production in line with domestic consumption, and for export. You remember what happened when this high loan, or price pegging, came to an end.

The bills that provide for high loans even up to 100 percent parity usually provide for a further restriction in production. These proposals would cut wheat to 50,000,000 acres and cotton to 9 or 10 million bales.

If we do this, naturally the farmers of the South will be driven into dairying, growing of wheat, raising cattle, hogs, and growing all of these crops in competition with every other agricultural section of the United States, which would tend to bring disaster to all agricultural sections, including the South.

In the second place, the thing that has been destroying our cotton markets in the United States and in Europe has been the tremendous increase in the production and consumption of rayon and all types of synthetic fibers, including jute and many types of paper products.

These high-loan bills referred to would leave our market wide open for a tremendous increase in the consumption of these highly competitive products, in that these bills do not provide a compensatory duty on these products.

In the third place, under a high loan it would take a tremendous amount of money out of the Treasury of the United States to subsidize any amount of cotton that we might be able to export so as to place the price of our cotton on a competitive basis with foreign prices. For instance, a loan price at 16 cents on cotton would call for a cash subsidy of from $40 to $50 per bale.

Then, there is the price-fixing bill.

Congress has passed legislation in the interest of other groups, actually giving them the right to fix prices; for instance, the Fair Trade Practices Act, the Bituminous Coal Price Fixing Act, a tariff policy for industry, and a freight rate-making commission known as the Interstate Commerce Commission for Railroads.

There is the Wages and Hours Act placing a bottom under wages and hours, and I could mention many other pieces of legislation passed by the Congress in the interest of various other groups.

I do not believe, however, that we could work successfully the actual price fixing of farm products unless we could change our marketing and distributing system. There are just too many people handling farm products, all of which would make it impossible to keep a check on price fixing.

We hear much these days from these selfish, price-fixing groups about how the farm prices are destroying consumers. It is not the price that farmers actually receive for their products that tends to destroy consumers. It is the fixed price that consumers have to pay after these products have passed through numerous middlemen. For instance, the cotton manufacturers and the bakers of bread have been and are now kicking about any efforts that we may put forth in the way of giving to farmers a fair price unless we take money out of the Treasury of the United States. In the meantime, cotton goods today are selling at a price to consumers that would warrant the paying of 18 to 20 cents per pound for cotton; however, they have been buying the cotton for 10 to 11 cents. I am told that bakers produce and sell 60 loaves of bread out of a bushel of wheat. At 9 cents per loaf, this would mean $5.40 to the consumer for a bushel of wheat for which the farmer receives the pitiful sum of 60 cents.

The purpose of my bill is to place farmers on a parity with other groups as to prices for their products in line with the prices they have to pay for that which they purchase.

In addition to the income-certificate provision, my bill has four other definite and specific proposals:

First. The Secretary of Agriculture is to ascertain parity prices on cotton, wheat, rice, and tobacco, and at the proper time he is to announce these prices.

Second. A loan program will automatically become effective. The loans will be based on two-thirds of the parity price.

Third. A compensatory duty will be placed on rayon, other synthetic fibers, and jute comparable to the amount of the income certificate placed on cotton to avoid giving these competitive fibers an economic advantage.

Fourth. The difference between the loan price and parity will be paid to the farmer from the cash secured from the sale of the income certificates to the manufacturers or processors. No money will be placed in the Treasury or taken out of the Treasury to make these payments.

Suppose the Secretary determines that the parity price on cotton is 16 cents per pound. This would automatically mean that a loan of 10⅔ cents per pound basis on seven-eighth-inch middling cotton would be made available to the grower of cotton.

Suppose the parity price on wheat was $1.25. The loan in that case would be 83⅓ cents, and the amount that would have to be paid to the farmer between the loan and the parity price would be 41⅔ cents.

This would definitely accomplish two things: First, it would put a bottom under the price of cotton and wheat, thereby weeding out speculation; and second, we would definitely know the amount that would have to be raised under the certificate plan to pay the difference between the loan or the price that the farmer received for his cotton and parity.

The bill also provides that the income certificates will be based on a graduated scale in being applied to the different types of cotton goods, so that it would not work a hardship on consumers who buy heavy, coarse cotton goods like overalls, work shirts, etc. Cotton bagging and cotton sacks would be exempt.

Suppose a cotton or wheat farmer because of some hazard should make a short crop or no crop at all under the high loan, you would not have any cotton or wheat to sell or put in under the high loan, but under the income-certificate plan, if you had a total crop failure you would still get your full and complete income-certificate payment.

I haven't any patience with any man who at this time would further reduce the production of cotton and wheat because we have a surplus, with thousands of hungry people and ill-clad people in the United States today. The need for clothing and food in Europe is increasing daily. What are you going to do about feeding and clothing the millions in the United States who will be unemployed after the war? We should thank God that we are in this blessed position.

In closing, let me state that the procedure on the part of the Congress in giving price-fixing privileges to industry, the railroads, labor, and other groups, while feeding agriculture promises—thereby forcing agriculture into economic slavery—will go down in history as the greatest economic blunder that was ever foisted on a free, patriotic, and liberty-loving minority.

As a Farm State, Wisconsin Suffers Unfairly From Federal Taxation of Gasoline

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

STATEMENT BY THE WISCONSIN PETROLEUM INSTITUTE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Wisconsin Petroleum Institute Committee on the effect on the farm industry of Wisconsin of raising the gasoline tax:

AS A FARM STATE, WISCONSIN SUFFERS UNFAIRLY FROM FEDERAL TAXATION OF GASOLINE

Wisconsin is essentially an agricultural State. Throughout the State we produce in varying quantities practically every grain, vegetable, and fruit grown anywhere in the North Temperate Zone. We grow corn, wheat, barley, hay, flaxseed, potatoes, sugar beets, tobacco, and a multitude of other farm crops. We put up more peas in cans than any other State. Our production of hemp is the greatest in the country. We also rank high in the production of cranberries, apples, cherries, and plums. In the number of dairy cows, in the production of cheese, butter, condensed milk products and casein, we are one of the Nation's leaders.

Our manufactures include the cutting of lumber in the Great Lakes region, beet-sugar refining, woodworking, and the building of farm implements. We are also important manufacturers of motor-vehicle parts and bodies. We mine substantial amounts of zinc, pig iron, and other iron ore, particularly hematite. A good portion of our population is engaged in the operation of the fisheries on the Great Lakes.

Each and every one of these activities is important not only to the citizens of Wisconsin but also to the citizens of the whole Nation. And in the production of each and every one of these products gasoline is used. It is for this reason that the people of Wisconsin view with alarm the current proposal before the United States Congress which would increase the Federal tax on gasoline from 1½ cents to 2½ cents a gallon. Such

a tax is tantamount to putting a tax on the tools with which we in Wisconsin work to feed ourselves and to feed our Nation.

There are no exemptions and refunds in the Federal gasoline tax law for gasoline consumed for nonhighway purposes, as there is in the tax laws of several of the farm States. There is no escape from the Federal tax on gasoline, because everyone who consumes gasoline must pay it. The small farmer who uses gasoline to operate his broken old tractor must pay it, just as must the wealthy owner of a palatial yacht. Therein lies the injustice of the tax. The consumption of gasoline is neither a true measure of tax responsibility nor is it an indication of ability to pay taxes.

To the citizens of a State like Wisconsin the excessive taxation of gasoline by the Federal Government would be particularly unfair because most Wisconsin citizens are farmers and must use gasoline to earn a living. In an attempt to improve their chances of earning a decent living, most farmers today have mechanized their farms. New equipment and new methods have transformed agriculture from a primitive to a highly complex business.

The Wisconsin dairy farmer, for example, is greatly dependent on his farm tractor and his farm truck. He may even be dependent on a stationary gasoline engine. His farm tractor he uses to till the soil, plant, cultivate, and harvest the grains needed to feed his livestock. He must use his farm truck to haul his hay and other feed to the barn from the fields. The milk, of course, must also be hauled to the market or to the creamery. There too the farm truck must be used. The stationary gasoline engine may be used to generate electrical power. Certainly it is indispensable as a power unit to drive feed grinders and other basic farm implements. The tractor, the farm truck, and the stationary engine, in turn, all are powered by gasoline.

A similar example could be made of many other Wisconsin citizens who are dependent on the consumption of gasoline to help them earn a living. The fisherman uses gasoline in his boat. The lumberman uses gasoline in his sawmill. The fruit grower uses gasoline in the tractor which hauls his insect sprayer. The wheat grower uses gasoline in his mobile thresher. And so on down the list. We can also mention the traveling salesman and his dependence on gasoline to earn his livelihood.

It is interesting to analyze the effect an additional 1-cent-a-gallon increase in the Federal gasoline tax rate would have on these Wisconsin citizens. Take the Wisconsin dairy farmer for an example again. The dairyman with the old farm tractor that just eats up gasoline because he cannot afford a new one would be forced to contribute more to the support of the Federal Government and to the national-defense program than his neighbor who can afford a new tractor that is easy on gasoline.

The dairy farmer who lives farther from the market or the creamery than his competitor also would be asked to contribute more to the cost of the Federal Government and the national-defense program because he would need to consume more gasoline than his competitor. If one dairy farmer should be unfortunate enough to live where there is no electrical power line, he may use a stationary gasoline engine to generate his own—only to find that in addition to suffering that misfortune he must also pay more taxes because he consumes more gasoline than the more fortunate farmer near a power line.

And so it goes with the fisherman, the traveling salesman, the fruit grower, and the lumberman. In each case the Federal gasoline tax appears to be a tax on misfortune. The fruit grower who is unusually beset with insects and pests and therefore must spray his trees more than his neighbor must consume more gasoline. He thereby acquires the additional misfortune of being asked to pay more taxes. The fisherman who must travel farther to get to the best fishing grounds is also unfortunate enough to have to pay more gasoline taxes to get there than does his more fortunate competitor.

Such is the fallacy of using gasoline consumption as a measure of responsibility for the costs of general government. When the gasoline tax is used as a road toll, as it is by the States, it is a sound tax. Then the more a person uses gasoline to drive his car or truck over the roads, the more he contributes toward the cost of constructing and maintaining the roads from which he so benefits. But the Federal gasoline tax is not a road tax. Purely and simply it is a general tax to provide revenue to finance the general cost of government, the same as the income tax.

The annual payment made toward the cost of general government by an individual in the form of Federal gasoline taxes obviously is measured by the amount of gasoline he consumes. Some individuals consume more than others because they live farther from their place of employment or because as farmers or salesmen they must consume gasoline to make a living. Accordingly, their Federal gasoline-tax payments for the support of general government are greater. It is the opinion of Wisconsin citizens that dependence on the gasoline tax to raise revenue for general governmental purposes is unsound because the distance a citizen travels on the highways or the extent to which he uses his farm tractor is a very poor measure of his responsibility for the cost of government.

Because Wisconsin is an agricultural State and its residents are primarily farmers, the use of gasoline-tax consumption as a measure of tax responsibility in our State is particularly inequitable and unjust. Too many of us are dependent on the consumption of gasoline to earn our daily bread.

Mighty River Goes to Work

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. LEAVY. Mr. Speaker, the Grand Coulee Dam and the Bonneville Dam on the Columbia River are constantly attracting increasing attention, and the American people are beginning to come to a better appreciation of what unexcelled possibilities for immediate and future growth are found in the development of the marvelous, beautiful, and mighty Columbia River.

Richard L. Neuberger, a special writer on the Portland Oregonian, has again written another exceptionally fine factual article concerning these two great dams and the river upon which they are located. The article appears in the Oregonian of May 11, and is characterized by the unusually rare descriptive ability that Mr. Neuberger displays in his articles concerning the great Northwest region.

Were it not for the exceptional foresightedness of President Roosevelt in directing the construction of these two giant projects back in 1933, we would find ourselves today so crippled by a shortage of electrical energy that our present airplane construction program would be impossible.

It was the dream of a few hardy and farsighted pioneers like Billy Clapp and Jim O'Sullivan, of Ephrata, Wash., and Rufus Woods, of Wenatchee, that kept the great Grand Coulee project alive. Through the efforts of former Senator C. C. Dill and others a sufficient interest was aroused in President Roosevelt to direct the beginning of these great projects 8 years ago.

Mr. Neuberger's article presents a fascinating and yet conservative statement of what has been done, of what is being done, and of what the future holds in connection with the mighty Columbia River. The article follows:

[From the Portland Oregonian]

(By Richard L. Neuberger)

Development of the Columbia River has been a dream of Americans ever since Thomas Jefferson's time. Today an ambitious program of development is far along. Millions of dollars from the United States Treasury have been spent to generate hydroelectricity, improve navigation, and reclaim and irrigate arid land.

With staccato rapidity new phases of that program are taking place. Scarcely a week passes by unmarked by some event of significance. A short time ago Grand Coulee Dam, mightiest structure ever reared by man on earth, began producing power. From Bonneville Dam transmission lines fan out like the rays of the sun. Factories break ground for new plants. Huge lift rocks at Bonneville and Celilo operate overtime hoisting boats into the upper river.

Happenings far across the seas have given added importance to the Federal Governments opening up of the Columbia. The British Empire is locked in a desperate struggle with the forces of fascism. America has promised to supply England with the sinews of war. Airplanes are needed, and ships and tanks and artillery. These things are produced with metal. Strategic metals, particularly aluminum, key to the airplane industry, are produced with huge quantities of electricity.

This was what President Roosevelt meant when he said that Grand Coulee had been "called to the colors." Vast amounts of power are required to rearm America and to bolster the war effort of Britain. New generators are being installed at Bonneville with all the speed which human ingenuity can muster. Work at Grand Coulee is many months ahead of schedule. The President and Congress have announced that the immense resources of the Columbia River are to be put to use in the conflict between the democratic nations and the Axis.

STATUS SURVEYED AFTER 7 YEARS

Today, 7 years after the development program on the great waterway was started, what is its status? How much money has been spent? How much power has been contracted for? Where have the big projects lived up to advance expectations? Where have they failed? What construction remains to be done? Are there any immediate prospects for change in the method of administering dams? In a word, how do Bonneville and Grand Coulee stand now? What is likely to be their dominant role in the future?

Bonneville Dam was completed in August of 1938, at which time two generators of 43,200 kilowatts each were switched on. In December of 1940 a new generator with a

capacity of 54,000 kilowatts went into operation. A similar generator was added in January of this year. This makes four generating machines installed at the present time. The total output of these machines is 194,400 kilowatts.

In January of 1942 two additional generators will be ready. These generators are now being installed and the size of the powerhouse is being increased. Dr. Paul J. Raver, Bonneville administrator, has recommended that the remaining four units be built as soon as possible. His recommendation has been accepted and Congress has appropriated funds for constructing the foundation for these generators.

POWER AT GRAND COULEE STILL PITTANCE

By next year Bonneville Dam will have an output of 302,400 kilowatts. The ultimate capacity of the project, when the other four generators are installed, will be 518,400 kilowatts. This would not be enough to satisfy demands, according to Bonneville officials. For that reason they say work has been rushed at Grand Coulee, where the eventual power capacity will be almost unlimited. "A good job well done," telegraphed President Roosevelt when Coulee poured a tiny fraction of its total output onto the Bonneville lines a short time ago.

The power produced at Grand Coulee is a mere pittance, a slight token of the vast torrent of kilowatts soon to flow from there. Two stand-by units of 10,000 kilowatts each are now in operation. On July 1 the first major unit will go into action. This will be the biggest piece of electrical machinery ever manufactured—a generator so vast that it required a train of 70 freight cars to haul it across the continent disassembled. The generator will produce exactly twice as much power as each generator at Bonneville—108,000 kilowatts.

In October of this year a second huge generator, the exact duplicate of the first, will be installed at Coulee. Generator No. 3 at Grand Coulee is billed for January of 1942. No schedule for the colossal plant follows after that. The final capacity there will be 18 units of 108,000 kilowatts apiece.

This will give a total output of 1,944,000 kilowatts, or nearly five times the capacity at Bonneville. Grand Coulee will dwarf into insignificance any other power plant in the world and will give the Pacific Northwest a huge reservoir of hydroelectricity far into the distant future.

How much power has been sold to date by the Bonneville power administration, which wholesales all the Federal energy generated on the Columbia River? Contracts have been executed for the sale of 278,830 kilowatts of energy. These contracts fall into five general classifications—public-utility districts, municipalities, cooperatives, private power companies, and industries. Here are the total Bonneville contracts by these groupings:

	Kilowatts
Public-utility districts:	
Skamania County [1]	280
Pacific County [1]	1,500
Wahkiakum County [1]	400
Klickitat County [1]	1,500
Tillamook County [2]	2,000
Kittitas County [1]	100
Lewis County [1]	400
Northern Wasco County [2]	4,000
Grays Harbor County [1]	2,000
Total	12,180
Municipalities:	
Cascade Locks [2]	200
Forest Grove [2]	750
Canby [2]	300
Monmouth [2]	400
McMinnville [2]	1,000
Centralia [1]	300
Ellensburg [1]	2,000
Eugene [2]	1,500
Drain [2]	250
Total	6,700
Cooperatives:	
Lincoln County [2]	300
Columbia County [1]	300
Wasco County [2]	200
Spokane [1]	800
Clatsop County [2]	150
Nespelem agency [1]	100
Salem [2]	100
Total	1,950
Private power companies:	
Portland General Electric [2]	30,000
Pac. P. & L. (Astoria) [2]	1,500
Total	31,500
Industries:	
Aluminum Co. of America [1]	162,500
Pac. Carbide & Alloys [2]	2,000
Pennsylvania Salt Co. [2]	2,000
Reynolds Metals Co. [1]	60,000
Total	226,500
Summary:	
Public utility districts	12,180
Municipalities	6,700
Cooperatives	1,950
Private power companies	31,500
Industries	226,500
Complete total	278,830

[1] State of Washington.
[2] State of Oregon.

From these figures it may readily be seen that sales of power to new industrial plants occupy 81 percent of the contract forms to date. Without the purchase by factories and industries of the bulk of the energy, only a thin trickle of juice now would be flowing through the power spigots.

PEOPLE IN REGION HELD SATISFIED WITH SET-UP

Officials of the private utility corporations maintain that the people in the region are satisfied with present power rates. They charge that Bonneville has been used politically in an effort to drive the private utilities out of the Northwest, but that the voters are not in sympathy with these tactics. The situation to date, according to power company spokesmen, confirms the claim that Federal development of the Columbia River must always be considered primarily as an encouragement to new industries and manufacturing plants.

New dealers take an opposite attitude. Congressman CHARLES H. LEAVY, of Spokane, says that public-utility districts have not had greater success in the Pacific Northwest because the power companies have spent more than $1,000,000 to hinder their program. Congressman LEAVY also points out that the very existence of Bonneville and Grand Coulee Dams has compelled private utilities to institute sweeping rate reductions. The recent annual report of the Bonneville administration emphasized the rate cuts which have occurred in this area.

When all 10 generators are installed at Bonneville, the total cost of the dam itself will be $75,000,000. Added to this is the appropriation for the far-flung transmission system. Across the mountains and plateaus of the Northwest steel-latticed towers extend like a many-legged centipede. The poles and wires to date have cost $38,415,000. This sum will carry the transmission-line construction until June of the present year.

FOUR PLANTS CONNECTED IN POWER NETWORK

Nearly 500 miles of high-tension 230,000-volt line have been strung. This network is in the form of a triangle and will be the base of the Pacific Northwest grid system. A line extends from Vancouver northeastward through the Inland Empire to Grand Coulee. Another line, this one also a double circuit, stretches north from Vancouver to Covington, which is in the Puget Sound area. At present men are building a line running east and west between Covington and Grand Coulee.

This gridwork will throw back and forth energy from four vast public power plants. In order of size these plants are (1) Grand Coulee, (2) Bonneville, (3) Seattle's city light system on the Skagit River, and (4) the Tacoma municipal plant at Lake Cushman. Last year the Bonneville Administration arranged an interchange arrangement with the cities of Seattle and Tacoma whereby power from those plants can be switched onto the Bonneville-Grand Coulee circuit. A similar tie-up exists with the Northwestern Electric Co.

Feeder lines include 120 miles between Vancouver and Eugene, 35 miles between Bonneville and The Dalles and 100 miles between Portland and Astoria. Work on the last two routes is still under way. Around the rugged face of Shell Rock Mountain, high above the Columbia River, electricians cling like alpinists as they anchor the towers to the basalt and string the wires to the towers. Because of blizzards and ice the steel poles must be rooted in concrete.

The Bonneville appropriation would fill a sultan's coffers, but the Grand Coulee cost dwindles it by comparison. Already the stupendous barrier on the upper river has cost $135,805,000. By September of this year Grand Coulee will be entirely completed. All that remains now is the finishing of the parapet and the superstructure. The immense bulk of the huge dam itself is virtually done. Into it has gone enough concrete to build a superhighway across America from New York to Seattle and back by way of Los Angeles.

Only about 10 percent of the total power output at Grand Coulee will be necessary for pumping the water which will irrigate 1,200,000 acres of land in the Columbia Basin. In spite of this fact, the pumping plant at Coulee will be large enough to supply New York City with water for a century. A large amount of secondary power can be used for pumping, because the high-water period on the Columbia River coincides with the irrigation season. This means that a lot of surplus power will be available when the irrigation canals must be full.

ELECTRICITY LOSES EFFECTIVENESS IN LONG TRANSMISSION

After electricity has been transmitted about 250 miles it starts to lose its effectiveness extremely rapidly. Will power on the Grand Coulee-Bonneville grid system be wasted because of the length of the transmission lines? Will countless kilowatts be lost pushing the juice through valleys, over mountains, and down dales?

Engineers think not. At strategic points on the system the plants throw power back and forth. Each long stretch of line is dotted with a generating plant somewhere. There are numerous substations at key points—at Yakima, for example, nearly midway between Coulee and Bonneville. A year ago Fortune magazine pointed out that if technicians could ever solve the riddle of transmitting electricity vast distances, then the Columbia River could virtually supply power for the entire United States.

One other phase of the development program on the Columbia River has been a huge increase in navigation. The locks at Bonne-

ville operate day and night hoisting oil boats into the upper reaches of the river. Before the dam was finished the maximum year for tonnage going past Bonneville had been 105,000 tons. In 1940 through the Bonneville locks went 707,444 tons of cargo. This has affected shipping on the Columbia all the way to the mouth of the Snake River, far in the core of the Inland Empire.

Prior to the completion of Bonneville the locks and canal at Celilo, above The Dalles, were stranded like a boat thrown up on shore. Few vessels could get as far as Celilo because of the rapids in the Bonneville region. Now the 51-mile lake behind the dam has buried these rapids beneath layers of slack water. Last year 325,900 tons of shipping passed through the rock-ribbed Celilo Canal. Prior to Bonneville dam the biggest year had been a puny 23,448 tons. So far as navigation is concerned, the Columbia River is undergoing a rebirth.

There are many imponderables attaching to the Federal development program on the Columbia and no one can foresee what the future holds. Had it not been for a fearful holocaust in Europe, the present industrial activity might not be taking place. All along the river—at the aluminum plants, at the shipyards near the mouth of the Willamette—the sinews of war are being forged for the stern grapple with the Nazi armies.

Political obscurity also surrounds the future administration of the projects. The present Bonneville power administration, which markets power from the big dams, is a provisional agency. The permanent bureau has not yet been established. At the present time two bills are before Congress which vitally concern the Bonneville administration.

The Bone-Leavy bill would give the Bonneville administrator authority to buy out private power companies as a whole. No longer would public utility districts have to negotiate for small parcels of huge private systems. The Bonneville adminstrator then could sell, at long terms, the private distribution facilities essential to a particular public agency. For this purpose the Bone-Leavy bill would provde a fund of $200,000,000 with which to finance the purchases. According to sponsors of the bill, the fund ultimately would be amortized.

MEASURE WOULD SET UP BASIN AUTHORITY

The second bill touching the Columbia River program is the Rankin bill, introduced in the House of Representatives by JOHN E. RANKIN, of Mississippi. This bill would set up a regional authority in the Columbia Basin similar to the T. V A. in the South. The measure has the support of Senator GEORGE W. NORRIS, "father of the T. V. A.," who on a trip to the Northwest last autumn said he did not see the wisdom of having three separate bureaus—the Army engineers, the Bonneville Administration, and the United States Bureau of Reclamation—dealing with problems on one river.

In a recent conference at the White House the President told Pacific Northwest Senators that he wants some Columbia River legislation enacted during the present session of Congress. Which bill it will be is still a moot question.

There is a distinct possibility that a third dam may soon be started on the surging waterway. The House Rivers and Harbors Committee recently approved the Umatilla project, which is sponsored by Senator CHARLES L. MCNARY and Representative WALTER M. PIERCE. This $23,700,000 dam would send boats and barges far up the Columbia and all the way up the Snake River to Johnson's Bar, at the lower end of Hell's Canyon. Last year the Umatilla project, which also would have powerhouse foundations, failed in the Senate by only 3 votes after an eloquent plea in its behalf by Senator MCNARY.

Constitutionality of Geyer-Pepper Anti-Poll-Tax Bill

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

MEMORANDUM BY MARTIN POPPER

Mr. GEYER of California. Mr. Speaker, I have received so many requests for a statement on the constitutionality of the Geyer-Pepper anti-poll-tax bill that I am today inserting in the RECORD a memorandum on the subject. The memorandum was prepared by Mr. Martin Popper, a prominent attorney of New York and Washington, who presented his views before the subcommittee of the House Judiciary Committee last spring. Since the subcommittee did not see fit to print the hearings, I am taking leave to insert the memorandum in the RECORD.

Mr. Popper has shown in his memorandum that—

First. The right to vote for Federal officials is a Federal right derived from the United States Constitution.

Second. The poll tax is not a qualification for voting and therefore does not fall within the rights granted to the States under section 2 of article I of the Constitution.

Third. Congress has the right to pass legislation to protect a constitutional right and to prevent corrupt practices in the use of a Federal franchise.

The memorandum follows:

MEMORANDUM IN SUPPORT OF THE GEYER-PEPPER ANTI-POLL-TAX BILL

The sole issue is whether the proposed legislation is constitutional. The legality or illegality of existing poll-tax laws is not material. The courts might conceivably find such laws constitutional without in the least limiting the right of Congress to legislate on the subject. Therefore the decision in the case of *Breedlove* v. *Suttles* (302 U. S. 277), which held constitutional a Georgia poll-tax statute, does not affect the constitutionality of the Geyer bill. As a matter of fact, I shall show later that even the Breedlove case is authority for the constitutionality of the anti-poll-tax bill. (It should be added that the Breedlove case is not even judicially decisive on the question of the constitutionality of the poll-tax statutes in a Federal election because no distinction was made in that case between a State and a Federal election; i. e., between an election for State offices and an election for President, Vice President, and Members of Congress.)

The right to vote in Presidential and congressional elections is a Federal right arising from and based upon the Constitution.

Article I, section 2, of the Constitution states:

"The House of Representatives shall be composed of Members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature."

The fact that the right to vote in elections for President and Members of Congress is a Federal right arising from the Constitution has been upheld by a long line of cases, including the following: *Ex parte Yarbrough* (110 U. S. 651, 652); *In re Quarles* v. *Butler* (158 U. S. 532); *Wiley* v. *Sinkler* (179 U. S. 58, 62); *Stafford* v. *Templeton* (185 U. S. 487); *Pope* v. *Williams* (193 U. S. 621); *Twining* v. *New Jersey* (211 U. S. 78).

In Ex parte Yarbrough the Court says:

"This proposition answers also another objection to the constitutionality of the laws under consideration; namely, that the right to vote for a Member of Congress is not dependent upon the Constitution or laws of the United States, but is governed by the law of each State respectively.

"If this were conceded, the importance to the general government of having the actual election—the voting for those Members—free from force and fraud is not diminished by the circumstance that the qualifications of the voter is determined by the law of the State where he votes. It equally affects the Government, it is as indispensable to the proper discharge of the great function of legislating for that Government, that those who are to control this legislation shall not owe their election to bribery or violence, whether the class of persons who shall vote is determined by the law of the State, or by the law of the United States, or by their united result.

"But it is not correct to say that the right to vote for a Member of Congress does not depend on the Constitution of the United States.

"The office, if it be properly called an office, is created by that Constitution and by that alone. It also declares how it shall be filled; namely, by election.

"Its language is: 'The House of Representatives shall be composed of Members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature.' Article I, section 2.

"The States in prescribing the qualifications of voters for the most numerous branch of their own legislatures, do not do this with reference to the election for Members of Congress. Nor can they prescribe the qualifications for voters for those so nomine. They define who are to vote for the popular branch of their own legislature, and the Constitution of the United States says the same persons shall vote for Members of Congress in that State. It adopts the qualification thus furnished as the qualification of its own electors for Members of Congress.

"It is not true, therefore, that electors for Members of Congress owe their right to vote to the State law in any sense which makes the right to depend exclusively on the law of the State.

"Counsel for petitioners, seizing upon the expression found in the opinion of the court in the case of *Minor* v. *Happersett* (21 Wall. 162), that the 'Constitution of the United States does not confer the right of suffrage upon any one,' without reference to the connection in which it is used, insists that the voters in this case do not owe their right to vote in any sense to that instrument.

"But the court was combating the argument that this right was conferred on all citizens, and therefore upon women as well as men.

"In opposition to that idea, it was said the Constitution adopts as the qualification for voters of Members of Congress that which prevails in the State where the voting is to be done; therefore, said the opinion, the right is not definitely conferred on any person or class of persons by the Constitution alone, because you have to look to the law of the State for the description of the class. But the court did not intend to say that when the class or the person is thus ascertained,

his right to vote for a Member of Congress was not fundamentally based upon the Constitution, which created the office of Member of Congress, and declared it should be elective, and pointed to the means of ascertaining who should be electors.

"The fifteenth amendment of the Constitution, by its limitation on the power of the States in the exercise of their right to prescribe the qualifications of voters in their own elections, and by its limitation of the power of the United States over that subject, clearly shows that the right of suffrage was considered to be of supreme importance to the National Government, and was not intended to be left within the exclusive control of the States."

In the case of *Quarles* v. *Butler* (158 U. S. 532, at 535), Mr. Justice Gray says:

"Among the rights and privileges, which have been recognized by this court to be secured to citizens of the United States by the Constitution, are the right to petition Congress for a redress of grievances; *United States* v. *Cruikshank* (92 U. S. 542, 555); and the right to vote for Presidential electors or Members of Congress; *Ex parte Yarbrough* (110 U. S. 631."

In this case of *Wiley* v. *Sinkler* (179 U. S. 58, at 62), we find the same learned Justice using this language:

"The right to vote for Members of the Congress of the United States is not derived merely from the constitution and laws of the State in which they are chosen, but has its foundation in the Constitution of the United States."

Mr. Justice Peckham in the case of *Pope* v. *Williams* (193 U. S. 621, at 633), adds these words of caution:

"Although it may be observed that the right to vote for a Member of Congress is not derived exclusively from the State law. See Federal Constitution, article I, section 2; *Wiley* v. *Sinkler* (179 U. S. 58)."

And in *Twining* v. *State of New Jersey* (211 U. S. 78), Mr. Justice Moody says:

"Thus among the rights and privileges of national citizenship recognized by this country are the right to pass freely from State to State, *Crandall* v. *Nevada* (6 Wall. 35); the right to petition Congress for a redress of grievances, *United States* v. *Cruikshank*, supra; the right to vote for national officers, *Ex parte Yarbrough* (110 U. S. 651); *Wiley* v. *Sinkler* (179 U. S. 58)."

To further sustain this point, during my presentation before the committee, I quoted from a minority opinion in *Newberry* v. *U. S.* (236 U. S. 232), as follows. Justice White said:

"The provisions of sections 2 and 3 of article I of the Constitution, fixing the composition of the House of Representatives and of the Senate, and providing for the elections of Representatives by vote of the people of the several States, and of Senators by the State legislatures, were undoubtedly reservoirs of vital Federal power, constituting the generative sources of the provisions of section 4, clause 1, of the same article, creating the means for vivifying the bodies previously ordained (Senate and House); that is providing 'The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.'

"As without this grant no State power on the subject was possessed, it follows that the State power to create primaries as to United States Senators depended upon the grant for its existence. It also follows that, as the conferring of the power on the States and the reservation of the authority in Congress to regulate being absolutely coterminous, except as to the place of choosing Senators, which is not here relevant, it results that nothing is possible of being done under the former which is not subjected to the limitations imposed by the latter. And this is illustrated by the legislation of Congress and the decisions of this Court, upholding the same. See Act to Regulate the Times and Manner of Holding Elections for Senators in Congress, approved July 25, 1866 (14 Stat. at L. 243, ch. 245; act of May 31, 1870, 16 Stat. at L. 144, ch. 114; act of July 14, 1938, 16 Stat. at L. 254, ch. 254, Comp. Stat., sec. 10, 248; act of June 10, 1872, 17 Stat. at L. 347, ch. 415; *Ex parte Siebold*, 100 U. S. 371, 25 L. ed. 717; *Ex parte Clarke*, 100 U. S. 399, 25 L. ed. 715; *Ex parte Yarbrough*, 110 U. S. 651, 28 L. ed. 274, 4 Sup. Ct. Rept. 152; *United States* v. *Mosley*, 238 U. S. 383, 39 L. ed. 1335, 35 Sup. Ct. Rept. 904)."

I want to reemphasize that the minority opinion is controlling on this point. As a matter of fact, there are four separate opinions in the Newberry case. There was no disagreement in any of the opinions—majority or minority—on the questions with which we are now concerned. The majority decision turned on another question entirely, namely, the right of Congress to legislate regarding primary elections in the State. Therefore on the question before us the above quotation is not really a minority opinion, but a controlling opinion. At any rate, the principle that the right to vote in Presidential or congressional elections is a Federal right arising from the Constitution is amply covered by the other cases cited above. The Newberry quotation is merely added because of its clarity.

Article I, section 4, of the Constitution is further proof that the right to vote for Federal officers arises from the Constitution and is a "Federal function" in the words of Mr. Justice Pitney, who wrote on behalf of himself and Justices Brandeis and Clarke in the Newberry case. That quotation reads as follows:

"It is said that section 4 of article I does not confer a general power to regulate elections, but only to regulate 'the manner of holding' them. But this can mean nothing less than the entire mode of procedure—the essence, not merely the form of conducting the elections. The only specific grant of power over the subject contained in the Constitution is contained in that section: 'And the power is conferred primarily upon the legislatures of the several States, but subject to revision and modification by Congress.'"

The original intention of the framers of the Constitution—that the National Government was to have paramount authority in Federal elections—was made clear by Mr. James Madison, one of the authors, in the debates in the Virginia Convention called to ratify the Constitution. I quote from Elliot's Debates on the Federal Constitution, Virginia, pages 366 and 367:

"With regard to the other point, it was thought that the regulation of time, place, and manner of electing the Representatives should be uniform throughout the continent. Home States might regulate the elections on the principles of equality and others might regulate them otherwise. This diversity would be obviously unfair—should the people of any State by any means be deprived of the right of suffrage, it was judged proper it should be limited by the general Government. It was found impossible to fix the time, place, and manner of the election of Representatives in the Constitution. It was found necessary to leave the registration of these, in the first place, to the State Governments, as being best acquainted with the situation of the people, subject to the control of the general Government, in order to enable it to produce uniformity and prevent its own dissolution."

Another indication that section 4, article 1, places rather broad power in the hands of Congress is that the word "manner" used in that section has been held to at least include protection against corruption in elections (*U. S.* v. *Brandwell*, 243 U. S. 476; *Newberry* v. *U. S.*, 256 U. S. 232; *Burroughs* v. *U. S.*, 290 U. S. 543).

The question has been raised that the portion of section 2 of article I of the Constitution which reads: "The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature" might be construed as prohibiting Congress from enacting legislation outlawing the poll tax in Federal elections. The conclusive answer to this erroneous contention is that the poll tax is not a "qualification." It is a tax, used in such a manner that it denies the exercise of the franchise to millions of people. A qualification "is a constructive attribute which is related to the fitness or capacity of a person to vote." A State may determine that certain minimum requirements are necessary before a person is capable of casting his vote in a responsible manner consistent with the interests and dignity of the democratic process. Thus a qualification that a person must reach a certain age before he may vote is related to mature judgment. Educational qualifications are related to an understanding of issues and the intelligent choice of candidates. Residence qualifications are related to familiarity to the community, its residents are its problems. But the payment or nonpayment of a poll tax bears no such relation to a man's capacity to exercise the franchise or any other function of government. It is not even a property qualification in the sense that we understand the meaning of that term. The poll-tax statutes do not say that a person must own a certain amount of property before he may vote. They say merely that a tax must be paid as a prerequisite to the right of franchise. Therefore, it is not even related to the outworn idea that a property holder is better qualified to vote because he has a greater interest in government. Therefore, the poll tax is neither an attribute of fitness or in any way indicative of a person's status. One person may pay another's tax and, in fact, often does. A political machine may, and in fact often does, pay many persons' poll taxes. It cannot be said that one person's graciousness, opportunism, or criminal intent in the payment of another's poll tax can in any way establish that other person's fitness, capacity, or qualification to cast a ballot. It is clear, therefore, that the poll tax is not a "qualification."

The Breedlove case itself, above cited, is authority for the contention that the poll tax is not a "qualification," but a tax. In that case, Mr. Justice Butler said:

"Payment as a prerequisite is not required for the purpose of denying or abridging the privilege of voting. It does not limit the tax to electors; aliens are not there permitted to vote, but the tax is laid upon them if within the defined class. It is not laid upon persons 60 or more years old, whether electors or not. Exaction of payment before registration undoubtedly serves to aid collection, from electors desiring to vote, but that use of the status powers is not prevented by the Federal Constitution" (*Breedlove* v. *Suttles*, 302 U. S. 272)."

But a "qualification" is enacted by the State for the purpose of "denying or abridging the privilege of voting." Such an abridgment is enacted by the State under the authority delegated by section 2 of article 1 of the Federal Constitution which is the only provision in the Constitution under which the States derive such authority. Since in Justice Butler's own words in the Breedlove case the poll tax "is not required for the purpose of denying or abridging the privilege of voting" but "a familiar form of taxation," and since the right to vote in Federal elections is a "Federal function," arising from the Constitution, it is clear that Congress may legislate to protect a constitutional right and to outlaw a corrupt practice in the use of the Federal franchise. It must be remem-

bered that the Constitution gives Congress the express power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof."

Another reference to the above quotation from Justice Butler's opinion in the Breedlove case confirms the view that the Court understood the poll tax to be a tax and not a qualification The Justice says:

"Exaction of payment before registration undoubtedly serves to aid collection from electors desiring to vote."

This can mean only that citizens are first defined as electors by satisfying all the "qualifications" determined by the State and then are subject to the payment of a tax before they are permitted to vote.

During the hearings, questions were raised with regard to the fifteenth and nineteenth amendments. Congressman MURDOCK inquired whether the fact that Congress felt it necessary to amend the Constitution in order to destroy the effect of State laws which denied Negroes and women the right to vote did not indicate that the States "have the ultimate say-so as to what the abridgment shall be."

The answer is clear. The States "have the say as to what the abridgment shall be" if "abridgment" means "qualifications" under section 2 of article I of the Constitution. At the time the fifteenth amendment was passed and for hundreds of years before as a result of slavery, etc., a substantial section of the population believed that only white persons had the ability and intelligence necessary to participate in the function of government. In other words, the State laws at that time made it a qualification that one had to be a white person to be an elector. The original Constitution impliedly took this fact for granted by the manner in which it allowed the States representation in Congress on the basis of "free" population. So that the enfranchisement of the Negro people was accomplished by amendment to the Constitution in order to dispel once and for all the idea that race was a qualification for being an elector.

The same kind of historical factor determined that woman suffrage should be enacted by amendment to the Constitution. For centuries it had been the universal belief that only men had the ability to govern. It is clear, then, that the State laws made the male sex a qualification for being an elector. The nineteenth amendment was, therefore, a great democratic advance which was meant to demonstrate that sex was no longer considered a qualification for the right to vote. It is significant in this connection that the stanchest proponents of woman suffrage correctly took the position that only to change a qualification would the Constitution have to be amended. They maintained that sex was not a qualification and that, therefore, woman suffrage could be enacted by congressional legislation.

The point is that Negro suffrage and woman suffrage were achieved through the process of constitutional amendment in order to fundamentally change what had been recognized in law as a qualification. As has been pointed out in this memorandum, the poll tax is in no sense a qualification and, therefore, does not come within the kind of abridgment referred to by Congressman MURDOCK.

SUMMARY

1. The right to vote for Federal officers is a Federal right derived from the Constitution, specifically sections 2 and 4 of article I thereof.

2. The poll tax is not a qualification for voting and therefore does not fall within the rights granted to the States under section 2 of article I of the Constitution.

3. Congress has the right to pass legislation to protect a constitutional right and to prevent corrupt practices in the use of the Federal franchise.

The purpose of this memorandum has been to prove the constitutionality of the anti-poll tax bill (H. R. 1024), but another interesting question presents itself, namely: How far should Congress or a congressional committee go in refusing to pass proposed legislation solely on the ground of constitutionality.

It is clear, of course, that Congress should not pass a bill which on its face is patently unconstitutional. But when the constitutional questions involved are complex or novel, or when they are subject to various interpretations, then Congress ought to legislate on the basis of social necessity, leaving to the courts the question of constitutionality. Especially is this true when the proposed legislation seeks to remedy an urgent situation affecting a substantial section of our population.

This is not a novel theory It was succinctly stated by the President in a letter dated July 5, 1935, addressed to Congressman Samuel B. Hill, chairman of a subcommittee considering the Guffey bituminous-coal bill. Writing in favor of the proposed legislation, the President said:

"Admitting that mining coal, considered separately and apart from its distribution in the flow of interstate commerce, is an interstate transaction, the constitutionality of the provisions based on the commerce clause of the Constitution depends upon the final conclusion as to whether production conditions directly effect, promote, or obstruct interstate commerce in the commodity. Manifestly, no one is in a position to give assurance that the proposed act will withstand constitutional tests, for the simple fact that you can get not 10 but 1,000 different legal opinions on the subject. But the situation is so urgent and the benefits of the legislation so evident that all doubts should be resolved in favor of the bill, leaving to the courts, in an orderly fashion, the ultimate questions of constitutionality. A decision by the Supreme Court relative to this measure would be helpful as indicating with increasing clarity the constitutional limits within which this Government must operate—I hope your committee will not permit doubts as to constitutionality, however reasonable, to block the suggested legislation."

These principles expressed by the President are merely applicable to the anti-poll-tax bill (H. R. 1024). The majority of the subcommittee has indicated its belief that the poll tax is being used as an undemocratic method of disfranchising millions of our citizens. The passage of the anti-poll-tax bill (H. R. 1024) would greatly strengthen the democratic process and restore faith in democratic institutions to the millions of Americans for whom this has never yet been "a government of the people." No legal niceties should stand in the way of this historically necessary task.

Feasibility of Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

RESOLUTION OF THE PORT OF DETROIT COMMISSION

Mr. DONDERO. Mr. Speaker, under leave granted me to extend my remarks, I am taking the liberty of inserting a resolution adopted by the Port of Detroit Commission, at its regular meeting on Monday, May 12, 1941, urging the enactment of legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project:

Whereas the industrial area within the port of Detroit district is a large and important producer of export merchandise and products vital to the defense of our Nation; and

Whereas this district is a part of the Great Lakes region, which produces more agricultural commodities and has a greater industrial production than any other section of the country; and

Whereas this section of the country is now deprived of economical water transportation to the Atlantic coast by insufficient depth of water and rapids in the St. Lawrence River; and

Whereas the development of a waterway in the Great Lakes and St. Lawrence River capable of passing the preponderance of ocean-going vessels would tend to stimulate and expand industrial activity in the Great Lakes region near the source of many of the bulky raw materials necessary to those industries; and

Whereas new industries vital to the defense of our Nation, notably naval shipbuilding, could be developed at points less accessible to an enmy (being more than 1,500 miles inland from our coast) if such an outlet were provided; and

Whereas engineering and economic surveys conducted by the Federal Government have approved the feasibility of the Great Lakes-St. Lawrence seaway and power project; and

Whereas not only the Great Lakes region but the entire United States would be benefited by the project: Therefore be it

Resolved by the Port of Detroit Commission, That it does formally and respectfully request the Congress of the United States of America to enact legislation enabling the completing of the Great Lakes-St. Lawrence seaway and power project; and be it further

Resolved, That a formally attested copy of this resolution be transmitted to the President of the United States and to the Senators and Congressmen who represent the State of Michigan in our national Congress.

I Am An American Day

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20 (legislative day of Monday, May 19), 1941

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered to recently naturalized citizens at Boston and Brockton, Mass., on Sunday, May 18, 1941. The subject of the speech was I Am An American Day.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Democracy is a very much misused word. A democracy is one of the forms of government under which people live. The best

definition that can be given of the democracy that we live under here in America is "a government of the people, for the people, and by the people." Another definition: Democracy is that form of government where the people, through the exercise of the voting franchise, govern themselves and determine for themselves their own way of life. Our form of democracy is one of our priceless heritages. However, there is something more important than the machinery or form of government. The political principles and ideals, the rights and liberties enjoyed by the citizens of a State, is the supreme test of the beneficent character of a government. Political ideals and principles vary widely. In some so-called democracies there is often only a shadow of the rights we enjoy in our American democracy. Indeed, there is very little, if any, difference between some democracies and the so-called totalitarian states. Dictatorships have and can exist under the name of democracy.

What we prize and boast of most in these United States is what we call Americanism—the American way of life. Americanism embraces the principles—civil, religious, and political—under which we live. To appreciate why we are proud to call ourselves American citizens we should understand what we mean by the term "Americanism."

It is not our material welfare that makes us proud of being Americans. The lofty principles underlying the American way of living were known, understood, and developed long before we achieved our present progress and our rivaled leadership in material greatness. Americanism represents much more than material achievement. Willingly throughout the years men and women have suffered and died, have endured the unspeakable hardships and sacrifices of war, not merely in defense of our material progress, but, above everything else, to preserve the political principles which to them represent the liberality and security of the fundamental institutions which the founders of the Republic established. Definitely and inspiringly did the founders express their noble purpose in the Declaration of Independence and again in the Constitution's preamble. I quote, "In order to form a more perfect union, establish justice * * * and secure the blessings of liberty to ourselves and our posterity."

"Establish justice." This, with the recognition of the inalienable rights with which God endowed man, is the beginning and end of Americanism. Equalities of rights and opportunities, unmolested pursuit of happiness, free speech, free assembly, freedom of worshiping God according to the dictates of conscience, security of property, and human rights are the basic foundations upon which our social and political institutions have been built, and now you new citizens have been given the precious right by your vote to participate in the affairs of our Government and help shape its destiny by preserving this heritage. It is the spiritual forces that inspired these principles and the application of them to our everyday life that makes us proud of being an American.

It is these exalted principles—justice, equality, and individual freedom—that alone can solve our future civic, social, and economic problems. In a word, these principles and these ideals constitute the soul and spirit of America, and they must be preserved if America is to survive. If we lose the spirit of the founders, we lose all, both material greatness and that which makes it worth having, and our priceless heritage will be gone.

It is the absence of these American political principles that explains the discontent of the masses in every part of the world in their natural aspiration to have a reasonable chance in life.

In desperation and perplexity the average man has been swept into the adoption of one or another of the dangerous isms of the day. We are not actually free from these movements. We have avoided up to this time the turmoil and catastrophes, poverty, and misery, of the present inferno in Europe and solved our complex economic and social problems by remaining aloof from the political systems of Europe and by the application of the principles of the founders to "establish justice" and to preserve the God-given inalienable rights that distinguish free men from slaves.

You new Americans now belong to the soul of America. You have within you the basis of great service to our beloved country. The history of the past shows that your predecessors have been loyal and have never failed in any crisis to serve and to sacrifice even life for the preservation of our traditions, our self-government, and our freedom.

Merely because some of you recently naturalized citizens were born in foreign lands where you and your children ate the bread of poverty and toiled for masters whose faces you never saw, and who robbed you of your just recompense for your toil; because you lived under an industrial or political system that treated you as mere tools, sapping your lifeblood, strength, and vitality for the enrichment of your masters; because some of you were illiterate, due to no fault of your own but to a system of government which suppressed education, realizing that knowledge would expose the unjust system and lead to a demand from the enlightened for a fair share of the resources of the world; because you lived under the flags of governments that were in reality, for you and your children, the black flags of materialism and tyranny, America does not deny you all the privileges and opportunities of the same citizenship that other Americans enjoy who, forsooth, happened to be born in America one or more days after their immigrant mothers arrived here.

Bear in mind, however, that naturalization certificates on reaching the age of 21 do not make you Americans. The test of American citizenship is not how quickly an alien can get into the courts to be naturalized or become of legal age but whether he possesses the American spirit. You are not a full-fledged American unless you have learned American ideals; unless there is instilled in your breast a hatred of tyranny and oppression and a love of freedom; unless you are willing to suffer, sacrifice, and die, if necessary, for the preservation of our free institutions which, with God's help, will continue to give to you and your children the largest and widest opportunities that any political institution in the world has ever secured for mankind.

You are not a real American if you entertain any prejudice against any other American, if you think of your fellow Americans in terms of race, creed, or conditions of servitude, and let me say to the so-called American natives that they are unworthy of their heritage as Americans if they think of Americans who were once aliens in terms of caste or class rather than as human beings with hearts and souls created by the same God that created them. When an unholy and inhuman prejudice, racial, religious, or social can prevail in a democracy, it possesses the sting of death.

What are the complaints some Americans make against the American citizen who a few years ago was an immigrant to these shores? Is it because he has not been industrious? No; no group knows the reality of the biblical injunction, "In the sweat of thy face shalt thou eat bread" better than they. Is it because he has not been law-abiding? No; statistics overwhelmingly show how rash, unkind, and unjust it is to indict a group of people by statistics that may tend to sow more crime in one group than another. As a matter of fact, statistics show a few years ago that cities and States where the good old Anglo-Saxon American stock is at its purest have a worse record for the crime of murder than our large cities teeming with large populations of immigrants.

Is it because he is a slacker? In the World War the percentage of aliens exempted or deferred of the total number registered was 33. The percentage of Americans exempted or deferred of the number registered was 64.

Has he been lacking in thrift? The answer is found in the huge accounts in American banks recording the savings of the immigrants and the millions of acres of soil tilled by his strength and the homes of happiness and sanctity he has established.

But some complain that the immigrants have not always been sympathetic; that they have not learned our language; that they have not improved their social condition—but is this the immigrant's fault? Who are responsible, they or we? Has not the immigrant been obliged to go where we put him or rather where the captains of industry have put him? Have they not been obliged to cluster largely around a limited number of industries in industrial centers, forming themselves into colonies not easily penetrated by American influence, often being without funds to travel any great distance, they were obliged to enter the mines and mills nearest the place of their arrival. We have made many of their women, as well as their men, slaves of our industrial system, our greed. We have sent them and their children into the factories, sweatshops, down into the mines, into the depths of the earth, and on the docks and our wharves—wherever there has been lowly and fatiguing work.

To the immigrant we always gave the lowest place, socially and industrially. Why condemn him for remaining where we put him or envy him because he and his children have risen to higher circumstances in life. Has it not been toil, hard, steady, and constant toil rather than American ideals that we have offered the immigrant above anything else, and is not his industrial master often his only teacher of Americanism?

We have much with which to blame ourselves for our failure to make the immigrant understand and appreciate the term Americanism. Well we know we have done this, and we have done it regardless of the immigrant's social condition; regardless of Americanism; regardless of their souls; regardless of their spiritual welfare.

My elder fellow Americans, let us not forget that the races which have come to America have brought with them rich values, keen sense of good workmanship, tireless industry, a sane and intelligent outlook upon life, family solidarity, simplicity of living, and in general, a depth of spirituality. Let us think of this fine contribution and think less of his poverty, his lack of culture, his aloofness from social and political customs, his strange language. Look into the immigrant's heart and we will find therein the qualities and the inspiration that will make him an American—none more appreciative or more willing to sacrifice for their adopted land.

Of course, there are exceptions. There are undesirable men and women, worthless representatives of every race who have found their way here, but justice demands we should not indict all our immigrants because of the poor specimens and unworthy groups that have from time to time come to the centers of American life. Here, too, we have been neglectful in our failure to eradicate them and send them back to the tyrannical governments from which they fled.

In conclusion, let me say that Americanism constitutes, in my opinion, neither the language a person speaks, nor the clothes that he wears, nor the wealth that he possesses, nor the education he acquires. Americanism is of the soul in which exalted political ideals and truths should abide, all embraced in three words—equality, justice, and freedom. A soul, whether American born or alien, incapable of absorbing and living the political

precepts decreed at the birth of this Nation can never be an American.

You citizens who came to America as immigrants have it within your power to bring to America a new life, clean and cheerful and sweet, that will help to check the decay of ease and wealth; you can bring a realization to all of us of the horrors of war and poverty and servitude, the value of peace and justice, and a new value of the liberties and economic opportunities so long denied you in foreign lands. You may help to diminish the evils attendant upon material greatness and prosperity by making us stop permitting the ease and luxury of the day to develop into a spirit of complacency and snobbism. You may help to make us have a better appreciation of our free institutions when we think of the courage you had to fly from your oppressors in other lands and make stupendous sacrifices to escape the intolerable servitude that opened before you and your children in the land of your birth.

You may even make us comprehend the uselessness of trying to dictate to other peoples and other governments how they shall govern themselves and what shall be their moral standards; the folly of America trying to settle their century-old rivalries, jealousies, and wars; the devastating results that may come to us if we attempt to settle the balance-of-power ambitions of foreign countries, all of which led to the denial to you and your children of the blessings of freedom and committed through the years your kin to poverty and destitution.

You may even make us understand the dangers to America from the abandonment of the religious spirit of the founders and the drift toward irreligion in America.

Citizens, be loyal to America. Accept your responsibilities as an American citizen cheerfully. Combat unceasingly those unfriendly influences in our midst which seek the ruin of our institutions. Beware of foreign intrigue, even when it emanates from the land of your birth. Let not unpatriotic teaching in academic places, nor intellectual anarchists deceive you. Do not lose faith in the bravery and the spirit of sacrifice of Americans to protect our institutions, without dependency on any other nation for our safety and security. Above all, eliminate from your lives those dangerous agitators whose treasonable propaganda would crucify our free institutions. Let your love for America be constant, strong, and true. Teach your children to love America.

Finally, let us ask God to bless America and keep it true to the lofty ideals of its founders. Without the guidance and support of the God of Nations all the vast edifice of might, power, and prosperity of which we boast would crumble to naught. May your efforts and mine under His guidance make secure the enduring principles of Americanism.

St. Lawrence Waterway Project

REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1941

Mr. PITTENGER. Mr. Speaker, I listened with a great deal of interest to the 1-minute speech of the distinguished and able gentleman from Pennsylvania [Mr. RICH]. I counted at least 12 errors in the remarks he made in that brief period of time. If he had had more time he would have put all the errors, all the fallacies, and all the propaganda that is being carried on against the St. Lawrence seaway into his speech in the Well of the House.

Mr. VOORHIS of California. Mr. Speaker, will the gentleman yield?

Mr. PITTENGER. I yield to the gentleman from California.

Mr. VOORHIS of California. One of which was that since the T. V. A. project was started, the consumption of coal in that area is about three or four times what it was before.

Mr. PITTENGER. Yes. He is wrong about coal, and he is wrong about everything else.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. PITTENGER. No. I want to tell the gentleman something first.

Mr. RICH. I want to ask the gentleman a question.

Mr. PITTENGER. All right.

Mr. RICH. When this administration puts the Government into all kinds of business and we become communistic like Russia, is that the kind of a country the gentleman wants this country to be? I do not want that.

Mr. PITTENGER. No. The St. Lawrence seaway project has no more to do with that proposition than the North Pole has to do with being located in the vicinity of the South Pole.

Mr. Speaker, suggestions that we are building a seaway for Canada are frequently made by people not familiar with the project. They like to drag this red herring across the trail in order to confuse the issues. The Great Lakes and the St. Lawrence River have already been improved, partly by the Canadian authorities and partly by the United States, so that we now have already a 14-foot seaway. The new proposed project simply plans to deepen some channels and build some locks, so that when it is completed there will be a 27-foot seaway. This will make it possible for ocean-going boats to travel the St. Lawrence River and enter Lake Ontario, Lake Erie, Lake Huron, Lake Michigan, and Lake Superior. All of these lakes border on New York State, Pennsylvania, Ohio, Michigan, Wisconsin, and Minnesota. It is fallacious to argue that the Great Lakes-St. Lawrence seaway project is a Canadian proposition. A look at the map proves the point.

Propaganda is now being spread to the effect that the coal miners in various sections of the country will be adversely affected by the new 27-foot channel. As a matter of fact, there is more and more demand for coal as time goes by. The demand is limited only by the high cost of transportation, which at the present time, and even with the St. Lawrence seaway project completed, makes it impossible for some localities to use coal as a fuel, or for the purpose of generating electric power. The completion of the St. Lawrence seaway will in no way change the situation. Figures are available which will show that the St. Lawrence seaway project will increase coal consumption and actually be for the benefit of the coal miners.

Those who are interested in facts in connection with this controversy should read a series of reports issued by the United States Department of Commerce. These reports, entitled "The St. Lawrence Survey," are prepared under the direction of Mr. N. R. Danielian, the director, in charge of this work. I commended to the attention of every Member of Congress these valuable documents, which will show what great economic benefits may be expected from a 27-foot channel instead of the 14-foot channel which now exists.

These documents will answer many objections which the opponents of the seaway are advancing at this time.

As I indicated some time ago on the floor of the House, a story has been circulated to the effect that the St. Lawrence River is frozen over most of the year, and that it would be impossible to generate electric power under the proposed project. One of my colleagues was greatly disturbed. He asked me about this propaganda. I wrote to the authorities in Canada and found out that the rumor was absolutely false. At some other time I shall discuss the power aspects of this project. Those interested in the report of the Canadian authorities will find the letter reprinted in the Appendix of the CONGRESSIONAL RECORD, page A1996. It is a most informative letter in connection with the study of the power angle of this proposition.

Porcupine Mountain

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1941

RADIO ADDRESS BY MRS. EDWARD LA BUDDE, OF MILWAUKEE, WIS.

Mr. BOLLES. Mr. Speaker, having unanimous consent to extend my remarks, I submit herein an address by Mrs. Edward La Budde, of Milwaukee, Wis., concerning Porcupine Mountain and the preservation of that remarkable area as proposed in H. R. 3793 and S. 1131. Mrs. La Budde in a radio address this month said, in part:

Unless the American people gird themselves for action, a great tragedy will overtake the last remaining virgin hardwood hemlock forests in the United States. They are situated mainly in the western part of the Upper Peninsula of Michigan and along the northern boundary of Wisconsin. The most beautiful and inaccessible area of greatest interest to nature lovers lies on the south shore of Lake Superior, within the confines of the Ottawa National Forest, and is

known as the Porcupine Mountains, so named by the Indians because of its resemblance to a crouching porcupine. This region is beautiful beyond description. Mr. Ben East, in the January issue of the American Forests magazine, has this to say: "The Porcupine country today is as it was in the beginning—an untouched roadless wilderness. And it has more than trees. It has beauty to take your breath away. Lonely lakes lie hidden in the deep-walled valleys, lakes that do not know the dip of a paddle blade from one year's end to another. Brawling mountain rivers, wild, dark, and rock-shattered, go roaring down to Lake Superior through steep-walled gorges, rocking over ledges in countless mist-hung waterfalls."

The Chippewa Indians inhabited this region for hundreds of years, and the first French explorers arrived at St. Marys River 2 years before the Pilgrims landed. Champlain and his associates were the first white men who saw the Chippewas, and they took back to Quebec the first account of Lake Superior. From then on we see an endless procession of famous explorers and missionaries, including Father Marquette. La Pointe on Madeline Island just across the big arm of Lake Superior, was the seat of the French Government in the West during these early days. In 1763 Great Britain took over this territory, and during this period the Hudson Bay Co. established a trading post on the island at the mouth of the Presque Isle River, which is one of the most beautiful scenic spots in the Porcupines. The water foams and swirls over tables, shelves, and steps of red sandstone. As one makes his way along the edge of the present outlet, the lovely hillsides disclose themselves wooded with virgin forests. Just above the point where the old and the new mouth of the river join, the larger and more beautiful falls can be seen, roaring and awe-inspiring, dashing over cascades of sandstone. The main falls are on the right, but more picturesque are the tiny falls on the left. For 3 miles up the river there is nothing to be seen but one continuous rapid cascade of falls; the beautiful forests march down to the water's edge, and no matter how hot the day may be, the canyon always contains a cool rush of air, filled with the delightful fragrance of pine.

This region is full of legends about copper and there are many old and famous mines in the Porcupine Mountains, whose history is lost in antiquity.

Adjacent to the Porcupine Mountain section on the east lies the broad flat valley of the Ontonagon River. Before the coming of the white man this valley was covered with the most beautiful and majestic white-pine forests in the world. This country had been ceded to the white man by various treaties with the Chippewa Indians and was carried as part of the public domain until 1778. About that year most of this section was given by the Government in the form of land grants, to canal and railroad companies as a means of encouraging transportation facilities. In 1880 the harvesting of the big trees began. Only the soundest cleanest pines were taken out of the woods; the smaller trees were left to burn up in the forest fires which were an annual affair. Some times thousands of acres burned at one time, and so in 10 or 15 years the entire area of beautiful forests was obliterated.

Turning back from these denuded plains we come again to the slopes and foothills of the Porcupine Mountains. The beauty of the sugar-maple groves, crowning the tops and slopes of the mountains, can hardly be visualized by anyone who has never visited this section of Michigan. One needs no greater lesson in conservation than to go from the denuded plains of the Ontonagon up to the fresh open park-like forests of the Porcupines with their beautiful lakes and streams, still covered with virgin growth. The ground is smooth underfoot and free from underbrush, while a great variety of flowers spring up where you tread, filling the air with perfume. It is unthinkable that these beautiful forests should be slaughtered and go the way of the pines. City people longing for fresh open spaces, tired of hard pavements, rushing traffic, and smoke-filled skies, can here fill their lungs with the clear cold air of Lake Superior, and find rest and peace beneath the tall pines, lofty maples, and oaks, in dimmed forest aisles. "To those who have eyes to see and ears to hear, it is a universe in which is being enacted the sublime drama of creation, a realm of ever-changing beauty, a stimulus to creative thought and effort." From the top of these mountains one can look forth upon the broad expanse of beautiful Lake Superior and if one is a poet at heart one can again see the Indians in their birchbark canoes, hear the voyagers sing their songs of the long ago as they paddled along these rocky shores, or one can walk along the mossy banks of the Big Carp River and see the wily trout attempting to leap the waterfalls to go ever higher to spawn—flashing their rainbow colors in the sunlight. But alas, all this exquisite beauty may be but a beautiful memory in a few years. Lumbering operations around the edges are gnawing deeper and deeper into the Porcupines. Unless the forests can be purchased from private owners very soon, it will be but a matter of a few years before this earthly paradise will be just another cut-over area.

The sad story of the white pine in the same State, "which were to last the world forever," is but a shameful record now of the white man's wasteful logging methods in his greed for money. Perhaps we will do better by the Porcupine Mountains—we can, if enough people become interested and are willing to do something about it. There are two bills now in Congress, H. R. 3793 and S. 1131, which, if enacted into law, will put the 165,000-acre Porcupine area and 200,000-acre virgin hardwoods, in northern Wisconsin, under State and Federal control. This means that good selective logging management will be practiced. It will not only protect the economic security of many thousands of people dependent upon the forests for a living but local governments as well. At the the same time 25,000 acres of the most beautiful and inaccessible area will be set aside as a wilderness sanctuary. America needs such sanctuaries for relaxation f. r study and for the pioneering type of recreation. The United States Forest Service, as well as the various States, have provided lavishly for the ordinary types of recreation which appeal to the vast majority of our people—picnicking, motoring, camping, and similar activities—but the primeval beauty of the Porcupines, which has by a miracle escaped the march of civilization, should be guarded jealously and left undisturbed for all time to come. Future generations will bless us for saving something of the forest primeval which will give our descendants a glimpse of what America looked like before the coming of the white man. Someone has said that "the measure of the citizen of today is his interest in the citizens of tomorrow." Conservationists, lovers of the out of doors, and clubwomen, the north woods are calling to you to save them. Unless the two bills, H. R. 3793 and S. 1131, will be enacted into law, these last remaining forest tracts will be gone in less than 5 years, due to the armament program now in progress and the heavy demands on the Nation's timber. Are you willing to make an effort and help save the Porcupines and the last hardwood stands in Wisconsin? Then organize for action.

Union Now—The Latest Subversive Activity in America

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

Mr. SHAFER of Michigan. Mr. Speaker, we find in the United States today a surprisingly large number of Americans who are sounding cymbals, ringing bells, and tooting horns in a movement called Union Now, meaning a union of the United States with Great Britain.

This is a strange sort of development, this Union Now business. It has only been a little over 160 years since our forefathers—and the forefathers of some of these people who are lending their names to this movement—were spilling their blood at Concord and Bunker Hill and were suffering hunger and privation and cold at Valley Forge in order to bust up a union with the very Empire that these people now want us to reassociate ourselves with.

The incident which has aroused my desire to discuss this question was occasioned when there came to my desk last week an invitation to attend a luncheon in Washington for the purpose of promoting this Union Now movement. This luncheon was held Monday at the Willard Hotel, the day after the Nation had celebrated I Am An American Day.

A circular accompanying my invitation to attend this luncheon described Union Now as "a nonprofit membership association for Union Now of the United States of America and the six British democracies as a nucleus of a world government—of, by, and for the people." The circular further contained many questions and answers relative to the movement, some of which I shall discuss a little later on.

The information accompanying the invitation listed perhaps 25 names prominent in the Social Register of Washington as the luncheon committee. Mr. Clarence Streit, chairman and promoter of the Union Now movement, which also uses the name "Federal Union," was the main speaker of the occasion. The pamphlet further stated that a chapter of Federal Union—and I think it ought to be called Federal Union Now—has been organized in Washington under the name of Washington Association for Union Now, with headquarters located at 726 Jackson Place NW.

It is a curious fact, Mr. Speaker, that in looking over the list of names of individuals who have permitted their names to be used in connection with this promotion for the subjugation of the United States of America by Great Britain I find several who have been rather vociferous and emphatic, not to say bitter, in their denunciation of another or-

ganization called America First Committee. I am sure all Members of Congress know the aims and purposes of the America First Committee. It is, I think, about the kind of a committee that men like George Washington, Thomas Jefferson, and Abraham Lincoln would join if they were on earth today. Nevertheless, among some of the sponsors and patrons of this Union Now movement there are several who have taken it upon themselves to carry on a very active campaign of hostility against the America First movement.

Now, as I have said before on the floor of this House, I am one Member of Congress who, along with millions of other Americans, does not want union now with Great Britain or any other foreign country. I do not want it now. I do not want it at any other time. I am definitely and emphatically opposed to any Anglo-American alliance. I do not hesitate to say that I believe this movement for union now is, in effect, as subversive to our form of government and to the continued independence of the United States of America—and when I say independence I mean political and economic both—as is communism, fascism, or any other "fifth column" or Trojan horse activity. Mark you now, I have all the respect in the world for the Dominion of Canada. I do not harbor a single thought of enmity for any dominion or any colony of the British Empire. I simply do not believe the United States of America ought to be inveigled into any union now with any foreign country. Strictly speaking, when I say foreign country, I mean any country outside of the Western Hemisphere, but if somebody wants to create a lot of trouble for the United States, let them start proposing in some of the countries to the south of us just such a Union Now movement between those countries and the United States as is proposed between the British Empire and the United States and see what happens. Within 24 hours the whole southern section of the Western Hemisphere would be ringing with warnings that Uncle Sam had suddenly gone imperialistic.

I do not know—and it may not be of great moment here—how many of these socialites who are permitting their names to be used in connection with this promotion may feel that they could in this way repay obligations for having been lavishly entertained at the British Embassy. I did not check up to see how many of them or their offspring were permitted to curtsy to King George and Queen Elizabeth when those very likeable monarchs visited our National Capital. I am certain, however, that we all ought to regard these people in exactly the same category as we do those who are engaged in the promotion of communism, fascism, and of Communist and Fascist front organizations which have been publicly condemned by committees investigating un-American activities.

Clarence Streit, who, I assume, has found himself a well-paying position in this movement, should be regarded in exactly the same light as any other subversive gentleman who wants to destroy the independence of the United States of America. Now, it may be that Mr. Streit will be surprised or angry, or even hurt, that I should say this, but I cannot find any difference in principle and in objective between those who want to hook up this Nation in a union with Stalin's communistic Russia and those who would hook up and shackle it with the burdens of fighting and paying for all these European wars henceforth through Union Now with the British Empire. I cannot help but think that a man as smart as Clarence Streit might have found himself a vastly better, and certainly a vastly more American, activity by which to make a living.

It is not clear from the arguments made by these misguided Americans as to whether we are to be graciously given dominion status or whether England will merely grant us colonial status in the British Empire. But there are a good many millions of red-blooded Americans who believe that we do not need to throw overboard the advice of George Washington, and Thomas Jefferson, and Abraham Lincoln, and most of the Presidents in between and entangle ourselves in foreign alliances, thereby letting ourselves in to fight and pay for all the wars of Europe henceforth. These several millions of Americans—by far the overwhelming majority of them—do not want any colonial status in the British Empire for their country; they do not want any dominion status in the British Empire for the United States of America; they do not want any political, commercial, or industrial union with Britain or any other foreign country, except the countries of the Western Hemisphere; they do not even want Britain to become a satellite of the United States of America.

Under this Union Now with Great Britain, I understand we will let down all of our tariff walls and institute a policy of free trade between the United States of America and the dominions and colonies of the British Empire. What will the American farmer say to that? What will the American manufacturer have to say about that? What will the American wage earners, whose wages are three, four, and five times the wages paid in the British dominions and colonies, have to say to such a proposal? All of these grave and, in my opinion, insurmountable economic obstacles to such a Union Now have been glossed over by spokesmen of the movement, who naturally desire that no one scrutinize too closely the economic impediments in the way of their cherished dream again to subjugate the United States of America to the rule of Great Britain.

Mr. Speaker, does anybody on this floor doubt for a moment that if we enter into a Union Now arrangement with Great Britain that we will have to submit to her dictation and domination? Anyone who believes that just does not know Englishmen.

Let me make my position clear. My sympathies are with those free governments in the world whose people are reaching ever outward and upward for the form of government, and the kind of life, that we call the American Government and the American way of life. I shall not undertake to explain, because even the most ardent of the proponents of Union Now and the most vociferous of the jingoes who want to go into this war right now, do not attempt to explain how we can carry the four freedoms into Cuba, into India, into the interior of China, into old Persia, into Russia, and into a lot of countries to the south of us within the limits of the Western Hemisphere. It is just futile and grotesque to talk, as these people do, of a plan to unite all democracies in a federal union. That is their purpose.

I pause here to ask Mr. Clarence Streit and his fellow associates in this Union Now movement, if India is included in the six British democracies? The first definition in Mr. Streit's very cleverly written circular says:

> What is meant by "Federal Union"? A union of democracies on the same general plan as the union of the 48 States.

In the second definition, this circular says:

> What is meant by a democracy? A government or state in which the authority to govern is derived from the consent of those governed and in which the rights of men, as defined in our Bill of Rights, are guaranteed and protected by the government.

Now, I am moved in a spirit of helpfulness to the Union Now movement to insert at this point just two paragraphs, I and IV, from the Bill of Rights as it appears in the Constitution of the United States:

Amendment I reads:

> Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

Amendment IV reads:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons and things to be seized.

We find, Mr. Speaker, that free speech is one of the first tenets of the Bill of Rights. Do these folks intend to take free speech to the people of India? If they do, I fear we will have to fight England ourselves. The next thing in the Bill of Rights is freedom of the press. Do they intend to take freedom of the press to India? And so on, down the line. Now, I ask, what single provision in the Bill of Rights exists in India or in any other colony under British rule? What single tenet of the Bill of Rights exists in the dictatorship in Cuba? In the dictatorships in the countries to the south of us? Free speech? Free press? Some of the Indians, or some of the Cubans, or some of those poor folks in some of the so-called democracies to the south of us should try free speech and free press for just about a week and see what happens. Those great democracies would forthwith adopt Mr. Stalin's method of democracy in which free speechers

and free pressers are promptly liquidated.

Mr. Speaker, I have taken occasion to look up the promoter of Union Now, Mr. Streit. He has had a colorful, and in some spots a significant, career. Who's Who had him born in California, while the Washington Merry-Go-Round, in an article published May 17, had him born in Missouri. He is listed in Who's Who as a newspaperman and author. He holds degrees from the Montana State University—and this is one of the significant points in his career, I think—was a Rhodes scholar at Oxford University in Britain in 1920 and 1921. He married a French girl and is the father of four children. He has been foreign correspondent for the Philadelphia Public Ledger and New York Times, and was a League of Nations correspondent from 1929 to 1939. In that year he was with the Washington Bureau of the League of Nations. This, too, is a significant point in this gentleman's career. It is evident that his sympathies have been pro-British, to the exclusion, I fear, of that deep-seated devotion to the objects and purposes of the founding fathers which we expect most of our young men to have. Mr. Streit served in the Engineering Corps of the A. E. F. in 1917, and he was in the Intelligence Service in 1918. He was attached to the American peace delegation in 1918 and 1919. He is a member of the Academy of Political Science and the author of four books.

I do not take this occasion to excoriate or even castigate Clarence Streit. He is merely an incident—and I strongly suspect merely a tool—in a vast propaganda that is operating in this country, which I believe had its inception and is directed from across the seas. I have not the faintest doubt that if Great Britain can get Union Now with us, and can persuade us to help fight and pay for all her wars, and to pay the cost of her post-war rehabilitation, that Great Britain would welcome this Union Now arrangement.

It seems to me that these people who are promoting this Union Now movement ought to give a little thought to the men and women and children in the United States of America. It is, of course, perfectly absurd to take seriously the statement made by the President that he wants to carry the "four freedoms" to everybody "everywhere in the world." We have not achieved those four freedoms in the United States as yet. It seems to me that if we are going to be the Sir Galahad of the world, we ought to begin in our own bailiwick. How can we expect all the other peoples everywhere in the world to have much faith in our ability to provide them with the "four freedoms" if we cannot provide ourselves with them?

We have facing this Nation at this hour economic problems growing out of the first World War which were not settled when we were led into this hysterical plunge into this second war. Those problems are being aggravated day by day. The national debt is going beyond all human comprehension. We are racing down the road to national bankruptcy and inflation and economic chaos just as fast as we can go. Every member of this body who will give sincere and serious thought to the subject knows that those problems are going to loom up and menace the welfare, and even the very liberty and security of this Nation, more than any shadowy armies of any overseas dictators.

I am going now to ask Mr. Streit and his sponsors how we can solve the American farm problems by Union Now with the British Empire. Just how can we hope to continue to raise our living levels in this Nation by Union Now with the British Empire? There is a former British monarch now living in official obscurity in Nassau who is there largely because he wanted Union Now with an American woman and because he dared to speak out his horror over the dreadful condition of the laboring people in Britain. Is that the kind of Union Now we want for the American workingman?

I would like to ask Mr. Streit and his associates how we can hope to reduce our national debt by Union Now with Britain and by undertaking to assume a partnership in the problems which face the British Empire.

I should like to ask Mr. Streit and his associates if their Union Now proposal means that we are to identify ourselves with that nation under a labor socialism which Mr. Ernest Bevin, the British labor economist, and others, say will be the kind of a government Britain will have after this war is over.

I should like to ask Mr. Streit if the people of Great Britain will join the people of the United States in the celebration of the Fourth of July, which has been our custom for the past 150 years, or whether they will expect us to forego this celebration.

Yes; there are a multitude of questions that must be asked and answered about this thing. There are a multitude of questions that Mr. Streit and his fellow Anglophiles must answer for the American people. There are a multitude of questions which the members of this Congress, as the representatives of the people, through whom the American people articulate, and only through whom the American people can be articulate, ought to ask about this movement.

I, as one Member of Congress, should very much like to know who is financing Union Now. We are bundling for Britain. We are leasing, lending, and giving away; and I am convinced, and I believe my colleagues are convinced, that lease and lend have really become synonymous with give under the $7,000,000,000 aid-to-Britain bill. Yes; we are doing all of those things. Could it be that part of our own money is being used to propagandize this Nation into subjugation to the British Empire? Could it be that while we bundle for Britain, and our workers toil to make munitions and supplies for Britain, and while all of our people sweat and work to pay the taxes which must be levied against them to partially meet the cost of those supplies, that British money is being used to finance this propaganda for Union Now?

If this discussion were not running so long, I should like to quote a few of the warnings from Washington, Jefferson, and Lincoln because, as usual, I find that these Union Now folks, like all propagandists, take a couple of lines from Lincoln quotations, carefully leaving out all of his emphatic warnings against just the sort of thing Mr. Streit and his cohorts are proposing.

I note in this Union Now circular that under question and answer No. 29, they say:

> Who is financing this and other propaganda for Federal Union?
>
> Thousands of American citizens whose names are on record at the State Department. No contributions have been accepted from non-Americans. We do not know nor care what the racial, religious, or partisan background of any contributor may be; the movement is neither Protestant nor Catholic, Christian nor Jewish. No international banker has a finger in it. It is a movement by, of, and for the common people.

"No international banker has a finger in it," the circular states. That is curious. I notice among the advisers, in fact, one of the members of the national committee is the wife of Thomas W. Lamont. "No international banker has a finger in it." No, that must not be the Thomas W. Lamont I am thinking of. It must be the wife of some other Thomas W. Lamont. The Thomas W. Lamont I am thinking of is a partner in the House of Morgan. I had understood at divers times that the House of Morgan was classed among the international bankers. Perhaps when an international banker joins Union Now he is no longer an international banker, he is just a Union Now banker.

If I had time, I should very much like to take the complete list of committee members, advisers, sponsors, and check up their interlocking relationships. It may not be known to the more guileless of American citizens, and even to guileless Members of this Congress, if there be such, that international banking connections are not worn on the sleeve like chevrons. They are carefully tied into interlocking directorates which resemble a very indirect spider web. If Mr. Streit seriously expects the American people to believe that no international banker has contributed in any way, form, or fashion to this propaganda for Union Now he ought to delete from question and answer No. 29 the statement that—

> We do not know or care what the racial, religious, or partisan background of any contributor may be.

Are we to assume that Mr. Streit merely looks them up from the standpoint of whether or not they are American citizens? Are we further to understand that everybody who contributes is thus investigated? I am moved to remark, "Bosh."

Now, before I close, there is one other statement in this questionnaire, question and answer No. 29, that I want to direct to the attention of the American people—the common people of America. The statement reads:

> It [Federal Union Now] is a movement of, by, and for the common people.

That, I fairly assume, means the poor folks—the farmers out in Iowa; the folks who live down below the railroad tracks; the people who earn their bread by the sweat of their brow. These would include that now famous "one-third ill-fed, ill-clothed, and ill-housed." Now,

in this movement we find, as members of the national committee, members of the council and advisers, and sponsors, besides Mrs. Thomas W. Lamont, the names of Mrs. Robert S. Brookings; Henry I. Harriman; Mrs. Ira Nelson Morris, of the famous packing clan; Admiral W. H. Stanley; Maj. G. V. Strong; Mrs. Frank A. Vanderlip; Rear Admiral H. E. Yarnell; Stringfellow Barr, president of St. Johns College; P. F. French, partner of the wealthy Price, Waterhouse Co.; George V. Cutten, president of Colgate University; and many others.

Now, Mr. Speaker, understand I have not a thing in the world against millionaires or bankers or college presidents or inheritors of great wealth or the associates of the Blue Book families; I am just trying to keep the record straight. I fail to find here in this list of committeemen and advisers and sponsors and contributors any of those from the ranks of the ill-fed, ill-clothed, and ill-housed, or those who earn their bread by manual labor.

This may be a movement of, by, and for the common people I, for one, hesitate to say that the people who seem to be moving it are at all common, and I am moved at this moment to exclaim, "O Abraham Lincoln, what strange movements use thy slogan, 'Of, for, and by the people.'"

Now, Mr. Speaker, I do not want to be understood as challenging the integrity or the earnestness or the sincerity of any of these people who are engaged in this Union Now movement. However, I certainly question their good judgment. I certainly doubt their Americanism. I certainly believe that, mistakenly or otherwise, innocently or by design—and I suspect there is a great mixture of both—these people are engaged in trying to enmesh the free United States of America in the troubles and the wars of Europe and the Orient. I want to raise my voice in this warning to the American people. Whenever we begin to take on the troubles of Europe and the Orient, we are taking on a cargo of troubles which will make any problems we now have seem like a game of checkers.

I want to warn the American people that if we go into any such alliance as this with "all the democracies of the world," including India, we will get to do the fighting and we will have to do the paying. If this Union Now crowd, or any other crowd like it, are successful in inveigling Uncle Sam in getting into the European war or the far-eastern mess with his men and his money, Uncle Sam will some time, sadder and wiser, come back home across the sea with nothing but his chin whiskers and a barrel.

For Heaven's sake, let us stay at home and solve our own problems. We hear all this talk about democracy. I should like to see it tried in the United States of America a little while just to see if it will work. We hear about carrying the "four freedoms" to people "everywhere in the world." I should like to see those "four freedoms" realized in the United States of America.

Let us face this situation realistically. Let us be on our guard against this sort of propaganda which inevitably springs up in a time such as we are now living in. Without any disrespect for these people at all who are engaged in this Union Now movement, let me warn the people, Mr. Speaker, we had better beware of the Union Now-ers and begin to devote the most serious attention and the most capable statesmanship which we can develop to solving those problems which stare us in the face here at home. If we do not do so, and do so soon, economic chaos will reduce this Nation to a state where neither Britain nor any other country will want union with us now or any other time.

Against Convoys, 92 Percent; Against Sending Our Troops Abroad, 95 Percent—A Revealing Poll of Public Opinion

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 16, 1941

Mr. LUDLOW. Mr. Speaker, the Indianapolis News is one of the great newspapers of the United States. In respect to the international situation this journal has been eminently fair and has given equal space in its columns to the interventionists and noninterventionists to present their arguments. The News has a very large circulation not only in the city of Indianapolis but throughout the State of Indiana and the Midwest.

Recently the News decided to conduct a little enterprise of its own to ascertain the real state of the public mind in regard to convoys and our entering the war and sending our troops to fight overseas.

On its first page the News printed a ballot submitting to the people the following questions:

1. Do you favor convoying by the United States of ships carrying war supplies to Great Britain?
2. Do you favor the United States entering the war and sending of our troops abroad?

After each question a space was provided for the answer.

The replies came in by the thousands, and in this way there was obtained a true poll of public sentiment, as distinguished from some other polls, and one much-publicized national poll in particular, which is obviously geared to the interventionist program.

The tabulation of the replies showed 92 percent of those who responded were against convoys and 95 percent were against the United States entering the war and sending our troops abroad.

In announcing the result of the poll, the News said:

Readers of The News who expressed their views on two questions pertaining to the war situation through a straw ballot printed in Saturday's editions of this newspaper showed a preponderance of opposition to convoys and to the United States entering the war.

The results of the balloting, compiled today, showed that of the thousands who participated, 92 percent were against the convoying of ships carrying war supplies to Great Britain, while 8 percent were in favor of convoying.

In answering the second question in the ballot, "Do you favor the United States entering the war and the sending of our troops abroad?" 95 percent of those participating voted in the negative and 5 percent voted in the affirmative.

The replies came from a cross-section of central Indiana, including Indianapolis and surrounding cities, towns, and suburban areas.

The ballot was carried by The News at the suggestion of readers who had been interested in a discussion that had been carried on in parallel columns of The News by the Indiana Committee for National Defense and the America First Committee. Neither of the committees had anything to do with the printing of the ballot.

This sampling of public opinion in a typical American city and a typical American State may be regarded, I think, as indicative of a vast majority sentiment throughout the country against the use of convoys and against another American expeditionary force. This poll, according to my way of thinking, is an event of the deepest significance. War-promoting Government officials and other headstrong interventionists should ponder its meaning a long time before they commit America to a policy which from 92 to 95 percent of the people disapprove.

I only regret that the News did not include in its referendum one more question, namely, "Do you favor adequate national defense?"

I am sure the combined answer to this question would have been 100 percent in the affirmative. Our Indiana people, if I judge them right, are in favor of building up our national defense to the highest perfection, so that no aggressor nation or combination of aggressor nations would ever dare to attack us, but they are firm and unalterable in their conviction that we should keep our American boys out of Europe's bloody wars and steer clear of foreign entanglements. They believe that if America enters the war as just one more belligerent, it not only will place our democracy in jeopardy but it will forfeit its opportunity to be of service to humanity in the reconstruction of the world that will come out of the ashes of the present conflict.

Borglum's Works in Washington

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1941

ARTICLE FROM THE WASHINGTON POST

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by

the House, I place in the RECORD a very interesting review of Gutzon Borglum's works in Washington written by Louis Varnum Woulfe. It appeared in his column The Post Impressionist, in the Washington Post this morning, May 19, 1941:

[From the Washington Post of May 19, 1941]

THE POST IMPRESSIONIST—GUTZON BORGLUM

Gutzon Borglum, better known for his sculpturing on Stone Mountain, Ga., and Mount Rushmore, S. Dak., has vanished from the life scene. Yet in different places works of his genius live—in bronze and marble. Despite his nomadic nature, he managed to pause in one locality or another long enough to leave the imprint of his artistic genius—somewhat like the gypsies of song, who scatter flowers wherever their caravans have rested. No matter what the inheritance of other localities may be, the Nation's Capital possesses eight of his creations.

Suppose we also become nomadic and, in this area, become acquainted with Borglum in bronze and marble. Let's make it a foot-trip, at least part of the way, for in Washington's fine spring weather there is both an invitation and an urge to get out in the open for a stroll. Since the course of empire wends its westward way, let's make a western goal stop No. 1.

Walking, we find ourselves initially at Twenty-third Street and Massachusetts Avenue, Sheridan Circle, now fenced in temporarily. Borglum fused into this equestrian statue a symbolism of the great cavalry leader during his famous ride down the Shenandoah Valley on October 19, 1864. When meeting his retiring forces, he exclaimed, "Turn, boys, turn; we're going back." Perhaps we brought with us an American history and have time to refresh our memories about this inspiring, courageous episode in national progress.

If, however, we are to take in all the scheduled points before day's end, we must hasten to Potomac Parkway, at the foot of Twenty-sixth Street.

Somewhat back from the highway, in keeping with his personal wishes for retreat from society, is a bronze figure of a man who, in life, made name and fame as a stump and platform speaker. Sated with this personal trait is the statue the sculptor brought into being, William Jennings Bryan, orator. While Bryan is mute today, these granite-inscribed words are graphic in reiteration: "You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold."

Advancing to the Pan American Building, Seventeenth Street and Constitution Avenue, "North America," emblazoned in gold, fascinates the eye in contrast with the white marble surroundings. A figure of a woman is above the legend, bearing a torch representative of enlightenment and a higher social order, while in her arms she protectively holds a child. This is a Borglum creation in marble.

FOUR PIECES IN THE CAPITOL

Time has crept apace and unwillingly steps are sacrificed. We'll now board the magic carpet for a flight to the Capitol. Here we find on view four of Borglum's works of art—two in bronze and two in marble. In Statuary Hall we catch sight of a seated figure in marble of Alexander H. Stephens, lawyer, Vice President of the Confederacy, Governor of Georgia, statesman, author, patriot. If in a philosophic mood, you will want to absorb these lines: "I am afraid of nothing on the earth, above the earth, beneath the earth, except to do wrong."

Beside it, as if the designer thought to let all beholders choose between two types of reproductions, is a standing bronze figure of Zebulon B. Vance, lawyer, legislator, colonel in the Confederate Army, Member of Congress, United States Senator, and Governor of North Carolina. Of this work, it is said, Borglum felt it was a piece of art that he considered his best characterization.

Forward of these two figures is that of Gen. John C. Greenway, in bronze, a noted mining engineer and distinguished soldier in the War with Spain and the World War. In the rotunda of the Capitol our inquisitive eyes observe a gigantic head of Lincoln—also a work of Borglum's, and a gift to Congress from a New York connoisseur of art.

BORGLUM'S OWN CHOICE

Once again we board the magic carpet and, zooming through the air, arrive at Rock Creek Cemetery, the silent city in the Nation's Capital. We pause to gaze at the memorial to Charles Mather Pfoulke, a one-time collector of and authority on tapestries. It is situated in a semicircular enclosure built of rough-hewn granite, with a bronze tablet on its outer side. Within is a draped figure of bronze standing beside an open tomb, inscribed, "Rabboni," meaning "Master."

In a lecture given a few years ago Gorglum acknowledged that he felt this beautiful piece of sculpture was his masterpiece. This life-size reproduction symbolizes Mary Magdalene as she greeted the Great Galilean. The sculptor has accurately preserved in the womanish face what might have been the delight and exaltation of that supreme moment in her life.

Now the stern, patriotic command of General Sheridan to his panic-stricken soldiers is an inspiring recollection; the stirring words of the Commoner are nearly lost in the echo; the appealing face of Mary Magdalene lingers as a sermon in forgiveness. The shades of evening fade out the charms of daylight. Sights once visible are lost by the shift. In such a serene atmosphere one pauses to meditate that a sculptor, by his interpretive art, bequeaths in passing from the mortal scene an enduring heritage to posterity.

LOUIS VARNUM WOULFE.

Lindbergh Charges People Were Misled on War Issue in 1940 Election

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20 (legislative day of Monday, May 19), 1941

ADDRESS BY CHARLES A. LINDBERGH AT MINNEAPOLIS, MINN.

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Charles A. Lindbergh in Minneapolis on Sunday, May 11, at 10:30 p. m.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One generation ago my father was speaking on platforms in Minnesota against American intervention in a European war. He believed that this country had a destiny of its own—a destiny that should be kept independent of foreign intrigue and free from foreign wars. He believed that the future of America lay more in the farms of the Mississippi Valley than on battlefields across the sea; more in the welfare of our factory workmen than in the balance of power in Europe.

RECALLS HYSTERIA

But the propaganda of war had spread through our country. Speakers from England addressed our meetings. Idealists called on us to fight. Hysteria, hatred, and intolerance arose. Even college presidents and their faculties joined in the cry.

When my father charged political and financial interests with leading us to war, his meetings were broken up, his patriotism was questioned, and the plates of his book were destroyed by Government agents.

The story from here on is well known. We entered a war that was going to make the world safe for democracy and end all need for war in the future. We sent 2,000,000 troops overseas, turned the tide of battle, and helped the Allies to victory. After that, we left the future of the world in the hands of our college presidents and our idealists.

TELLS OF CONSEQUENCES

You know as well as I how they proceeded to outlaw war and make the world safe for democracy. The greatest wars and the bloodiest revolutions of all history have taken place under their guidance.

From the Russian revolution to the Spanish; from the first World War to the second; from the Fourteen Points of Wilson to the four freedoms of Roosevelt the idealists have held sway. We formed the League of Nations; we demobilized our armies; we sank our battleships; we made practice of nonaggression. But the kind of democracy we fought for in the last war doesn't exist today, even in our own country.

Except for England, we have incurred the antagonism of every major military power in both Europe and Asia. And all this has been done in the name of democracy, peace, and civilization. As a matter of fact, the idealists themselves seem to be about all we fought for in the last war that remain intact.

WANT WAR AGAIN

Now they want us to go to war again, to save the world by means of some new idea. Speakers from England are touring our country today, as they did a generation ago. Our college presidents are shouting for war just as they did before. If only we send our armies abroad once more, they tell us, if only enough people in Europe can be starved and killed, we will be able to spread peace and democracy and our way of life over the entire earth.

People who have been pacifists all their lives are now saying that peace must be brought by war. Ministers are preaching that Christianity must be spread by famine. Our Government asks us to preserve democracy abroad by creating a dictatorship in our own country. And all this in the name of idealism.

But there are many people in the Nation who have ideals of another kind. There are many of us who believe that the place to save democracy is right here in America. We do not accept the claim that Christianity will thrive on famine, or that our way of life can be spread around the world by force. We believe that it is possible for a man or nation to be self-reliant, to be practical, to be successful, even to be tolerant, and still have ideals of the highest type.

ATTACKS PROPAGANDA

We in America have learned something since the last war. We know more about propaganda. We have heard of the secret treaties of Europe. We have watched Eng-

land and France wrangle through an entire generation until a new war came tumbling down upon their shoulders.

The question is whether we have learned enough to withstand the barrage of propaganda to which we have been subjected ever since this war began; and whether, if we can withstand that barrage, we will be able to impose our will upon the Government in Washington.

There was once a time in America when we could impose our will by vote. Candidates brought political issues before us and stated clearly their stand. After an election was over responsibility to the voters remained. That was what we once called a principle of democracy. Many of us thought we were still operating under that principle at the elections last November.

MISLED IN ELECTION

Both political parties had adopted platforms against intervention in this war. Both political candidates spoke constantly of peace. Many a sincere Democrat and Republican voted with full confidence that his man, if elected, would keep our country out of war. But it now seems doubtful that we even had two parties last November, at least as far as the Presidential candidates were concerned.

The people of this Nation were not given the chance to vote on the greatest issue of our generation—the issue of foreign war. And yet we are now told that we must go to Europe to fight for the very principles of democracy that were denied to us in our own Nation last November.

We have been asked to fight abroad for the "four freedoms." But there are other freedoms that our President did not mention. One is the freedom to vote on vital issues. Another is freedom of information—the right of a free people to know where they are being led by their Government.

MISLED ON DEVELOPMENTS

I doubt that any country in Europe has been less informed about the intentions of its government than we have been here in America. I doubt that any country there has been more misled about the actual developments of the war. For years the true facts about Europe have been hidden from us. Any attempt to tell them met with the utmost criticism and opposition.

When I stated in 1938, after a careful study, that the German air force was stronger than any combination that could be brought against it, I was charged with being both wrong and pro-Nazi. When I said in 1939 that this war could not be won simply by sending a few thousand airplanes and cannon to Europe, I was accused of being misguided and un-American.

When I told you in 1940 that the phrase "steps short of war" was nothing but a mask of war itself, I was called a "fifth columnist" and a Hitler agent. When I tell you today that we are not in a position to win this war for England, I am charged with being disloyal by the same politicians and idealists who denied all the other statements when I made them. But they cannot point to a single one that has not turned out to be true.

DENIES FAVORING REICH

The charges undoubtedly will continue in the future, and I do not know how much longer free speech will be allowed in this country. But as long as our laws permit it, I intend to continue telling you what I believe.

I have never wanted Germany to win this war. But I know that England is not in a position to win it, even with our help. That is why I have constantly advocated a negotiated peace. The idea that the entire continent of Europe can be blockaded into submission is ridiculous.

Short of an internal collapse, of which there is no sign today, the only way Germany could be defeated is by an invasion. Even if an invasion were possible, which I do not believe, the resulting devastation would be so great that Europe could not recover for generations, if it could recover at all.

TELLS INVASION DIFFICULTIES

The developments of this war have shown clearly how difficult it is to force a landing or to supply an expeditionary force on a hostile coast. If we intend to invade Europe against the opposition of the same army and air force that broke the Maginot Line and routed the British forces in Norway, Flanders, and Greece, then the United States must become a regimented and military Nation that surpasses Germany herself in totalitarian efficiency.

In that case we might as well realize that our way of life is a thing of the past, and that our children will be fortunate if they live long enough to see it again.

The conditions which exist in Germany today will seem moderate in comparison to those which will result from a prolongation of this war.

REPEATS FATHER'S WORDS

Men and women of Minnesota, I say to you today what my father said a quarter century ago. The future of democracy depends on our ability to govern our own country. It rests in the character of our own people, in the welfare of our farmers, and our workmen. What happens in Europe and Asia is of secondary importance to what is happening to us here in our own land.

It is far more essential for this country to have farms without mortgages, workmen with their own homes, and young people who can afford families than it is for us to crusade abroad for freedoms that are tottering in our own country.

In the stand he took a generation ago, my father was thinking of more than war alone. He was opposing a great change in our national policy, the same change Washington opposed in his Farewell Address—the merging of our destiny with that of Europe.

WAR IS NO SOLUTION

My father knew that one war would lead to another, and that a second would lead to a third. He knew that by entering war we would not solve the problems that were arising, either in our own country or abroad. In this, history has proven that he was right.

Now, you and I, in a new generation, are faced with this choice again. We have seen the result of one European war in which our country took part. Are we to enter a second at this time? Is the destiny of America to be forever merged with that of Europe? Are we to take the policing of the entire world upon our shoulders? Must our children fight again when the next European war takes place?

The answer to these questions depends upon the action that you and I, and millions like us, are ready to take. In every section of the United States men and women are assembling, as we have assembled tonight.

If we have the stamina and the courage to speak forth, if we are willing to organize and work, if we have enough character and faith to justify an independent existence for this Nation, American soldiers will not be sent to fight again in these intra-European wars.

APPEALS TO AUDIENCE

The America First Committee has been formed to give voice to the people in this country who are opposed to intervention. It is a nonpolitical organization open to any patriotic citizen of the United States.

Our principles are open and clear. We believe that the security of this country depends upon our own character and strength. We believe that the best way to defend our Nation is to keep our armies on our own soil. We stand for an independent American destiny.

If you stand with us, we ask you to join this committee. We ask you to help us by organizing meetings, by talking to your friends, and by writing to your Representatives in Washington. The crisis is here. We need your assistance now. The entire future of America depends on the action we take at this time.

A Disgraceful Blitz

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1941

Mr. LUDLOW. Mr. Speaker, while "blitzkrieg" is an alien word, it seems to represent a form of rush tactics that is not unknown in America.

Now and for weeks past a heavy "blitz" has been going on in this country with the White House as the object of attack.

Because the President, as befits one in his position of grave responsibility, is soberly and seriously considering what is best for the country, and because he does not get us into war immediately the columnists, who have taken upon themselves the direction of the affairs of the Nation and the world, have lost patience with him. They are "blitzing" him in an effort to force him to lead America into the war by the convoy route.

The chorus of attacks on the President by the columnists, and the war promoters who speak through the columnists, is a major disgrace that would not be tolerated in any other country in the world. The fact that we have free speech in America does not change the despicable nature of these performances. As an old newspaperman who has some regard, I hope, for the proprieties, I am made sick at the stomach when I read the daily outgivings of the columnists and note their very obvious efforts to blitz the President. Knowing him as I do I do not think he is going to be bossed or bulldozed by anybody.

I think it is proper to remind these offensive columnists and their inciters of the promises made by Mr. Roosevelt during the campaign last year, his final word being delivered at Boston on October 30 when he said:

> And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars.

Speaking in New York, on October 26, 1939, President Roosevelt said:

> In and out of Congress we have heard orators and commentators and others beating their breasts and proclaiming against sending the boys of American mothers to fight on the battlefields of Europe. That, I do not hesitate to label as one of the worst fakes in current history. It is a deliberate setting up of an imaginary bogeyman. The simple truth is that no person in any responsible place in the national administration in Washington, or in any State government, or in any city government, or in any county government, has ever suggested in any shape, manner, or form the remotest possibility of

sending the boys of American mothers to fight on the battlefields of Europe. That is why I label that argument a shameless and dishonest fake.

President Roosevelt, addressing the teamsters' union on September 11, 1940, said:

I hate war now more than ever. I have one supreme determination—to do all that I can to keep war away from these shores for all time. I stand, with my party, and outside of my party as President of all the people, on the platform, the wording that was adopted in Chicago less than 2 months ago. It said: "We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

Speaking at Philadelphia, October 23, 1940, Mr. Roosevelt said:

We are arming ourselves not for any purposes of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: "We will not participate in foreign wars and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

Speaking at Boston Garden on October 30, 1940, Mr. Roosevelt said:

Your boys are not going to be sent into any foreign wars. They are going into training to form a force so strong that, by its very existence, it will keep the threat of war far away from our shores. The purpose of our defense is defense.

In a fireside chat on December 29, 1940, President Roosevelt said:

There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of our Government to send such a force. You can, therefore, nail any talk about sending armies to Europe as deliberate untruth.

A recent poll of Indiana sentiment taken by the Indianapolis News shows that 92 percent of the people are opposed to the convoys, which they believe would be certain to drag us into the war immediately. Our people prefer the wise assurances expressed by the President in his campaign speeches to the war madness of the columnists.
